

Grandin attracts overflow crowd to first Food For Thought lecture

By Melanie Musselman

Temple Grandin has taken what many perceive as a disability and turned it into an amazing ability to be a pioneer in two very different

tion streamed live on monitors. Food For Thought is a grassroots student group at K-State who seeks to bridge the gap between agriculture and consumers. Their facul-

abilities. Individuals with autism pay more attention to the details.

"I think that's what's wrong with people that are making the ag policy today.

mined it was simply the flag waving on top of the flagpole that distracted the cattle.

She discussed different kinds of thinking. There are visual, pattern, verbal and auditory thinkers. The visual thinkers, which she is one of, think in pictures and are poor at algebra. It's the pattern thinkers who are the music and math minds. The verbal and auditory thinkers are poor at drawing.

"Visual thinking gave me a whole lot of insight into the animal mind. When I design cattle handling facilities, visual thinking has been a huge asset in my career," Grandin said. "I see movies in my imagination and this has helped me understand animals."

She gave the example of church steeples. If someone was asking her about a church steeple, her mind would flash through all the steeples she has seen in her lifetime. So, when she was young, she didn't have a good perception on how many different steeples there are in the world. But, as she got older she had more stored images in her mind to give her a sense of what a church steeple looked like. Her impression was broadened and increased to include many varieties, styles and kinds.

She showed an MRI scan of a typical brain and an MRI scan of her brain, comparing the two. She pointed out that her brain stem was larger than those in the typical brain and referred to hers as "a huge, internet trunk line." Grandin explained that both animals and people with autism are "bottom-up thinkers," instead of top-down. She said she had to learn concepts by putting many different specific examples together in different

situations, coming back to the details.

Grandin believes the world needs all these different kinds of minds to work together to solve the world's problems. She credited these autistic genes in the great minds of Einstein and other scientists who have made the world and our lives better.

Grandin is the author of seven books on autism and animal handling and welfare, and has taught at Colorado State University at Ft. Collins, Colo. for 20 years.

Throughout her lecture, Grandin made references to the award-winning HBO movie that was made about her life entitled "Temple Grandin." It stars actress Claire Danes as Grandin and premiered this last February.

The movie won seven Emmy awards and those in the industry predict it will receive Golden Globe nominations, which are announced in December, as well. She was intimately involved in the making of the movie and had high accolades for the HBO production team and Danes, who played her.

"The movie did a great job of portraying me as a visual thinker, and how my science teacher got me thinking and expanded my mind and what I could do." She encouraged parents and teachers of autistic children to act as mentors for them just as her science teacher did for her.

Another interesting aspect of being involved with

Continued on page 12

Temple Grandin said last Tuesday during a lecture in Manhattan at the K-State Union Forum Hall that this year's award-winning HBO movie portraying how her mind works as a person with autism was exactly right. She said she is a visual thinker, which has been a huge asset in her career of designing livestock handling facilities. Grandin encouraged parents and teachers of children with autism to mentor them as her science teacher did her to further broaden their interests and abilities.

and diverse areas. But, it's what she knows the most about and has connected the two together: autism and animal handling and welfare.

Grandin, animal science professor at Colorado State University and world-renowned animal behaviorist, kicked off the Food For Thought Lecture Series on November 9 to an overflow crowd in the K-State Union Forum Hall. According to event coordinators, there were an estimated 650 in Forum Hall and 1000 more gathered in the upstairs ballrooms and the courtyard to watch her 7 p.m. presenta-

ty advisor is Dan Thomson, director of K-State's Beef Cattle Institute and professor in the College of Veterinary Medicine.

Grandin was diagnosed with autism in 1950 when she was three years old. It was a grim diagnosis back then because doctors recommended that she be institutionalized. It was her mother, who worked with her, and time spent on her aunt's cattle ranch that opened her eyes to possibilities in the world. It's because of her autism that she has been able to actually understand how an animal's mind works.

She said an animal's world is sensory-based, but for humans, our language covers up our sensory-based

They are too abstract in their thinking. They are getting away from the details," said Grandin matter-of-factly. "These details are getting lost. They don't know what really goes on at farms and feedlots."

She said details matter to animals. It can mean the difference between whether a facility works or it doesn't work.

"Animals can be distracted by reflections of light or chains hanging down. It's these simple distractions that can mean all the difference." She showed a picture of a facility that was going to be torn down because they couldn't figure out why it was having problems. Grandin said they deter-

Food for Thought lecture series honors Dan Upson

Food for Thought, a student group at Kansas State University, is launching a new lecture series in honor of Dan Upson, K-State professor emeritus of anatomy and physiology.

The lecture series will focus on bringing information about agriculture and food production to a broad audience, said Chelsea Good, a member of the group.

The new lecture series was announced prior to the Nov. 9 presentation at K-State by Temple Grandin, a world-renowned ani-

mal behaviorist and a person with high-functioning autism. Grandin was introduced as the first Upson Lecture speaker.

Upson taught at K-State's College of Veterinary medicine for 35 years before retiring with in 1994. He received numerous awards for his dedication to classroom teaching and the veterinary profession.

"When a person thinks of K-State's history in agriculture and veterinary medicine, nobody has had a bigger impact on teaching stu-

dents than Dr. Dan Upson," said Dan Thomson, director of K-State's Beef Cattle Institute and Food for Thought faculty adviser. "Dr. Upson has made numerous contributions teaching on our campus and continues to work with the beef industry and veterinary profession in the state and beyond."

"As I travel across our state, almost always someone asks, 'How is Dr. Upson getting along? You know, I thought he was the best teacher. Give him my regards.' That is what it is

all about as an educator: motivation for lifelong learning," Thomson said.

Upson was Food for Thought's first speaker in February, addressing a standing-room only crowd in the College of Veterinary Medicine's Frick Auditorium about efficient use of the earth's resources, and providing food for the world's people.

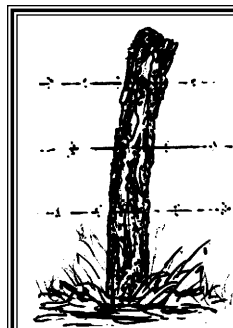

Food for Thought also is launching a 500 for \$500 fundraising campaign to ensure the growth of the Upson Lecture series. Donations may be sent to Food

for Thought, Trotter 1D, College of Veterinary Medicine, Kansas State University, Manhattan, KS 66506.

Food for Thought is a grassroots group of K-Staters who seek to bridge the gap between agriculture and consumers. The group includes undergraduate, graduate and veterinary students, as well as young alumni. More information about Food For Thought is available at the group's blog, <http://bloggingfoodforthought.blogspot.com>; on Facebook; or on Twitter at <http://twitter.com/fftgroup>.

After the approximately one hour lecture and answering questions for about 45 minutes, Grandin, who has taught for 20 years at Colorado State University at Ft. Collins, Colo., was very accommodating to talk to attendees and sign autographs. Many brought one of the seven books she has written on animal welfare, animal handling and autism to sign.

How To Wean Heavier Calves

Cattle are again on the move, being gathered to wean the calves. It is harvest time for the cow/calf man. The two big factors in gross returns are what the calves weigh and what price they will sell for. Of the two, weight is more important than price. So the big question is, How can I get the calves to weigh 600 pounds instead of 500 pounds when they are weaned?

I am going to mention a few things that may be done to put on pounds, and you, the reader, can probably add to the list.

1. The foundation cow herd is vitally important. Cows should have good milking genetics, EPDs (Expecting Progeny Difference) with maternal traits not excessive in some areas such as in milk production but certainly enough to give great growth to their offspring. A cow giving too much milk may need to be milked out to prevent a spoiled udder; if her teats are too full and enlarged at first, the new baby may have difficulty sucking them and may nurse only the ones with easiest access, leaving one or two quarters untouched. But light calves are often light because the mother is not giving enough milk, leaving the calf with inadequate nourishment. EPDs in maternal traits can be influenced greatly by the bull one chooses; this is important when retaining replacement heifers.

2. Spring calves born early, like in late January or February, will weigh heavier in the fall. However, the negatives are the greater probability of severe calving weather and more feed requirements for the cow. Death losses may be greater.

3. Use bulls to produce birth weights of around eighty pounds, not over a hundred pounds. Strive to eliminate stress.

4. Injection of growth hormones can add several pounds to the weaned calf when done early. However, there could be a dock in price in some cases.

5. Rainfall greatly influences pasture grass in rankness and succulence, so stocking rates are important. The cow should be able to fill her rumen in three to four hours in the cool of the morning and then lie down to rest in the shade and to regurgitate and chew her cud. Since one cannot predetermine rainfall, it is helpful to have forage crops such as sudan grasses to supplement native grass in the summer months in case of insufficient moisture to maintain adequate pastures. Cows that have to graze hard all day to fill their rumens give less milk, and also it is hard on the pastures.

6. Blood-sucking fly and other parasite control is important in controlling pinkeye and other worrisome irritations.

7. In dry seasons, it may be advantageous to creep feed the calves to keep them gaining. One must factor in the cost of grain and the price the calves will bring to determine whether it will pay to creep the calves. If the calves get too fleshy, the dock in price can be severe.

8. Cross-breeding can produce bigger, heavier, and more muscled calves. Charolais bulls on Angus cows, for example, can be a good cross. Those smoky calves used to sell for less as feeders, but I believe that over time they have proven to do well in the feedlot. However, if rat tail calves occur, buyers balk at bidding on them. There are several satisfactory crosses, so it's a matter of one's preference.

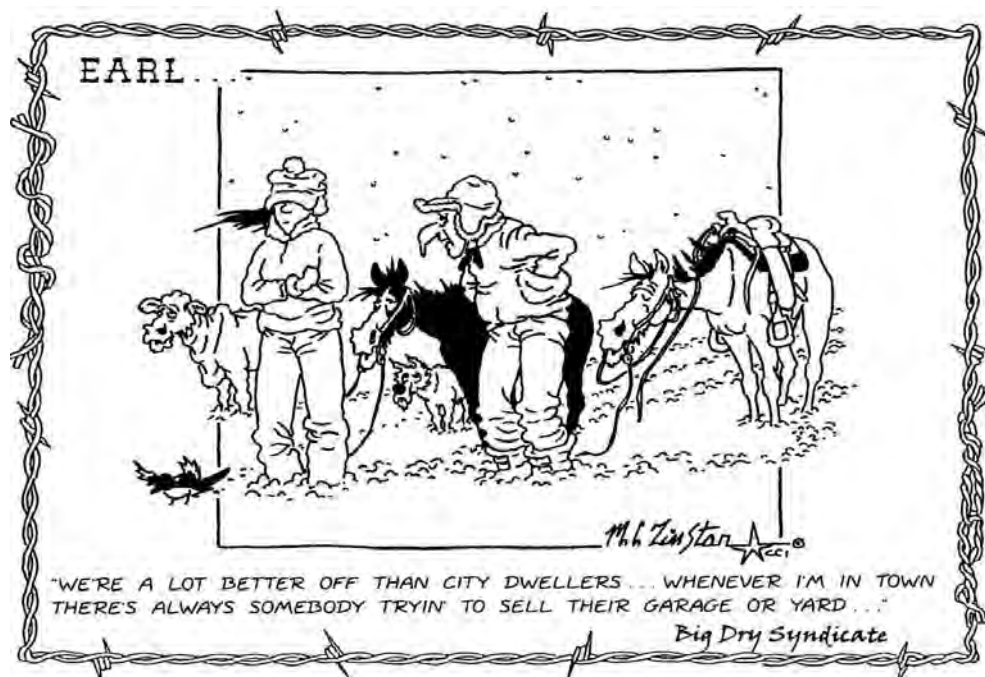

9. Some cow men wait until weaning time to castrate the bulls. Bull calves seem to muscle more and thus weigh heavier by delaying castration until they are worked at fall weaning time.

10. Calves sold in larger bunches such as 25, 50, or 100 often bring a premium.

11. Weaning the calves by using plastic nose tabs seems to remove wearing stress and sickness. Their preconditioning shots can be given at the same time. After the nose tabs are installed, the calves are released to be with their mothers. Even though they cannot suck, there is no bawling or stress. Their rumens are developed by now and they keep right on grazing and gaining in weight. In about ten days, the calves are weaned and are run through the chute to have the nose tabs removed. If the tabs are left in too long, more than two weeks, the nose may become irritated and bleed a little when the tab is taken out. Calves weaned the old-fashioned way often do not gain for several days; they are stressed from the separation, they stand around and bawl for their mothers, and are more susceptible to sickness. That is why calves are sometimes sold right off the cow, while in their bloom, even though they may bring less per pound. I repeat, eliminate stress.

12. Two big stress operations are dehorning and castrating. These two processes can be eliminated through breeding and by elastrating the bull calves when they are a day or two old.

When one adds the possible gains that can be made through the suggestions given above, it should help to increase weaning weights up to a hundred pounds. At today's prices, selling weaned calves at 600 pounds instead of 500 pounds could bring a return of up to \$100 more at the market. For a bunch of 100 steers, this could mean an increase of up to \$10,000 in the paycheck.

Prairie Ponderings

By Donna Sullivan

A friend of mine, who owns the Mercantile in my hometown, came up with a wonderful idea. She would sponsor a wreath-decorating contest, then auction off the wreaths at our local Christmas event to raise money for the community food pantry. Sounded like a great plan to me . . . until she asked me a dreaded question.

"You are going to enter a wreath in the contest, aren't you?"

It was a chilly day, but I broke out in a cold sweat. It was not her intention to send me into a personal crisis — I mean after all, she is my friend — but nevertheless, it took every ounce of self-restraint I could muster not to run screaming out of the store.

You see, the problem is, I'm just not a crafty person. I have friends who

can sew buttons on a piece of felt and have the end result look like a family heirloom. I sew buttons on a piece of felt and it looks like buttons on a piece of felt . . . sewn on by a blind-folded chimpanzee wearing boxing gloves.

When I was a young adult, crafts were all the rage. My friends decorated their homes with all sorts of lovely things they created. I tried it, and it prompted my husband to ask why I'd let the local kindergarten class vandalize our living room.

So finally, about the time I was thirty, I came to terms with the fact that while I have a few talents here and there — for instance, I can spit between my teeth farther than just about anyone you will ever meet — crafts are not, and never will be my thing.

But there stood my friend, who always believes the best about me and causes me to want to live up to those beliefs, asking me to enter her wreath-decorating contest. So I decided to face my demons head-on.

"Sure," I said, feeling like my last breath was being strangled out of me with Christmas-colored ribbon. I bought a wreath and headed out the door.

"You can do this, you can do this . . ." I repeated like a mantra as I went to my car.

The rustling of the wreath in the bag as it bumped against my leg sounded strangely like, "No you can't, no you can't . . ."

I've decided on an outdoor theme for my wreath, in hopes that my husband will be inspired to help me. Unlike me, he can be quite crafty. Plus, he has all kinds of cool outdoor-things we can use to decorate it. Now if I can just find my hot-glue gun.

Ahhh, the hot-glue gun. Now there's a whole other story all in itself.

Reflections

from Young Farmers & Ranchers

Traditional management practices in agriculture might conjure up visions of horse-drawn equipment and truly diversified farms with numerous species of livestock and just enough

farm ground to raise food and feed for one family. We think of one-room schoolhouses, single-stall outhouses and trips to both that were "uphill both ways in the blinding snow

and scorching sun."

Traditions in agriculture run deep, and in most industry editorials and discussions they are not always viewed as a favorable phenomenon. Quite often, traditions and the mindsets that surround them are blamed for many of our industry's shortfalls. While history can be a wonderful teacher, it also has a tendency to hamper our creativity and desire to make progress.

That is why during a past beef industry conference, I was impressed with a quote that I heard one of my counterparts use in conversation. Near the end of our conference, Jason Peeler, Floresville, Texas, shared the following statement with our group, "We all talk about the traditional nature of our industry, but the biggest tradition in the cattle business... is BUSINESS."

While this might be considered a contradiction in terms, Jason went on to explain his theory. Farms and ranches have come and gone, but the majority of operations that have existed through the decades have one tradition in com-

mon — they treat their operation as a business.

Today's society seems to harbor animosity toward businesses in general, especially "big business." But the truth is that businesses — regardless of size — are what helped create the United States of America. Hard-working, creative, driven individuals who wanted to have their own piece of land, storefront or factory found ways

to produce a good or service profitably.

As anti-agriculture and other organizations continue to encourage a civil war between "big, multi-national agribusiness" and "family farms," let us recognize the importance of varied sizes of businesses in our lives. Like it or not, even small operations depend upon the technology, research & development and capital that

large companies inject into our operations. And those large agribusinesses depend upon the deep traditions and work ethic that we provide to help their products or services function and make a profit.

And regardless of our size or management philosophies, the one tradition that I hope we all continue to share is one of business.

Jake Anderson led out the grand champion market goat at the Morris County Fair. Judge for the show was Ashley Mitchell.

Thanksgiving Turkey In Eight Easy Steps

(NAPSA) — To help the bird you serve get “gobbled up” this holiday try these easy tips from “Flavors of America” TV host and cookbook author Chef Jim Coleman and Chef’sChoice®.

Choosing The Turkey

• Step 1: When choosing your turkey, allow 1.5 pounds for each guest. For eight guests, you’ll want at least a 12-pound turkey. There will be ample leftovers.

• Step 2: If you’re buying a frozen turkey, allow 24 hours of thawing for every four-to-five pounds; a fresh turkey should not sit more than 48 to 72 hours before preparation.

• Hints: According to Coleman, there is no scientific evidence that bird gender makes a difference in quality or taste. Environment and feed, however, can determine a taste difference.

Turkeys can be frozen up to 12 months. If you have a frozen turkey from last year, it’s safe to cook for this year’s feast if it has remained frozen throughout the year.

• Step 3: Flavor your turkey with Coleman’s “holiday rub” (recipe for 12-pound turkey).

The Holiday Rub

- 2 tablespoons chopped fresh thyme leaves (save stems)
- 2 tablespoons chopped fresh rosemary (save stems)
- 2 tablespoons chopped fresh sage (save stems)
- 2 tablespoons minced garlic
- 2 tablespoons minced shallots
- 3 lemons

Mix all ingredients above, set aside stems. Pepper to taste.

Step 4: Wash turkey inside and out with cold water and pat dry with paper towels. Place turkey in roasting pan and lift up the skin starting near the neck, and rub mixture onto the meat under the skin.

Squeeze juice of one lemon over turkey. Use remaining herb mixture to coat top of bird. Prick two lemons and place them into cavity with the stems from sage, rosemary, and thyme.

Step 5: Preheat oven to 350 degrees. Cook until juice runs clear when turkey is pierced at the base of leg. The turkey is done when the meat thermometer reads 180° in the thickest part of the bird. After the turkey is cooked, let it cool for 15 minutes. Cooling makes the meat easier to slice.

How to Carve A Turkey

Step 6: Use a very sharp carving knife to carve the turkey. Sharp knives are safer and they will help you smoothly cut thin, even slices without shredding the meat. You don’t have to be an expert to put a razor-sharp edge on your knife. A sharpener like Chef’sChoice EdgeSelect 120 can make sharpening easy. The sharpener uses 100 percent diamond-coated disks and a

revolutionary polishing stage to create a professional knife edge in seconds. The precision guides eliminate guesswork, making predictable, razor-sharp edges every time it’s used.

Step 7: Remove and set aside the legs and the last joint of each wing. Make a long, deep (to the bone), horizontal “base cut” into the breast just above the wing. Be sure to use a good, sharp knife.

Step 8: Slice down vertically through the breast until you meet the original base cut. This will release perfect, even slices.

“Two common mistakes people make after cooking their turkey is not waiting long enough for the bird to rest after it comes out of the oven, and improperly carving the turkey by using a dull knife or the wrong technique. If you slice the turkey too soon, most of the juices will run out and your meat will be dry. And if you carve improperly or use a dull knife, carving may be more difficult and your turkey could become unappetizing,” Coleman said.

For help finding a sharpener that’s right for you, call (800) 342-3255 or go to www.chefschoice.com.

(NAPSA) — Apples are hard workers and cooking with apples and cheese can be a breeze!

Jarlsberg Pork Tenderloin with Apples

- 4 ounces diced Jarlsberg
- 1 tablespoon dried bread-crumbs
- 1-pound pork tenderloin
- 1 teaspoon pepper
- 1/2 teaspoon dried thyme leaves
- 1/4 teaspoon salt
- 1 tablespoon peanut oil
- 2 large garlic cloves, minced
- 1 cup diced onion
- 3 peeled, sliced (1/4-inch) Granny Smith apples (3 1/2 cups)
- 1/2 cup apple brandy & 1/2 cup chicken stock (or 1 cup chicken stock)

Preheat oven to 400 degrees. Mix Jarlsberg with breadcrumbs and set aside. Cut tenderloin lengthwise in four equal strips. Mix pepper, thyme and salt; sprinkle on pork, wrap and set aside. Heat large ovenproof pan or skillet on medium-high. Add oil, swirl to coat and sauté garlic with onion 2 minutes.

Cooking Comfort Food With Apples

Add apples, cover and cook 8 minutes or until soft. Off heat, remove 1/2 the apple mixture and, using spatula, create four 4-inch pancake rounds with remaining apples. With each pork strip, make a donut circle, creating 2-inch hole in center; secure with toothpicks. Place pork rounds atop apple “pancakes.” Fill pork center with cheese-bread-crumbs mixture and cover with reserved apples. Bake 20 minutes. For doneness, cut into 1 round to check if meat is white. For well done, bake 5 minutes more. With spatula, carefully move rounds to serving plates. Reheat skillet on stove, pour in apple brandy and boil 2 minutes, scraping up brown bits. Add chicken stock and boil to reduce by half. Drizzle on pork rounds.

Spiced Sausage Slider

- 12-inch skinny baguette or 6 slider rolls
- Honey mustard
- Relish (Sweet India or dill

pickle style) OR sliced bread & butter pickles OR cornichons

12 pound thin-sliced, roasted spicy sausage: chorizo, Italian or kielbasa

1 large Fuji or Gala apple, cored & sliced thin

6 slices Jarlsberg cheese or try a premium aged Gouda, like Old Amsterdam

Tip: To roast sausage, pre-heat oven to 425 degrees. Spray a roasting pan with olive oil and cook sausage until well browned, about 25 minutes.

Slice bread or rolls horizontally to open. Place on foil-lined baking sheet and toast. Spread layer of mustard and relish on top and bottom halves. Arrange sausage, apple and cheese on bottom half. With roll (or baguette) tops to the side, broil 3-5 minutes until cheese begins to melt. Cover with tops (slice into 2-inch sliders if baguette) and serve.

NCBA sets sights on stopping return of the death tax during lame duck session

While the results of the midterm election are currently grabbing headlines nationwide, the National Cattlemen's Beef Association (NCBA) urges members of the U.S. House of Representatives and U.S. Senate to focus on the unfinished business of the 111th Congress. With Congress reconvened as of Nov. 15, NCBA's top priority for the lame-duck Congress is stopping the death tax from reverting to staggering pre-2001 levels. Additionally, NCBA will carefully monitor how Congress resolves the 12 annual appropriations bills that have yet to be funded, as well as whether or not Congress allows multiple tax cuts and credits (including the 2001-2003 Bush-era tax cuts) to expire at the end of 2010. But given the limited window of time with which Congress has to work, it's anyone's guess what will actually be accomplished during the lame duck.

If the estate tax goes untouched, on Jan. 1, 2011, it will return to pre-2001 levels, meaning all assets that exceed \$1 million will be taxed at a rate of 55%. Colin Woodall, NCBA vice president of Government Affairs, said this would be a devastating blow to family-owned farms, ranches and small businesses. NCBA is actively pursuing all opportunities to secure critical relief from the estate tax during the lame duck session.

NCBA continues to support a full repeal of the estate tax. However, Woodall said a full repeal is not doable and NCBA supports legislation introduced in the Senate by Blanche Lincoln (D-Ark.) and Jon Kyl (R-Ariz.) and in the House by Shelley Berkley (D-Nev.) and Kevin Brady (R-Texas) to increase the exemption level to \$5 million and reduce the rate to 35%. The proposals also ensure that any relief related to the exemption is tied to inflation and that a stepped-up basis is included. Before leaving town in September, Congress passed a continuing resolution that funds the government through Dec. 3. During the lame-duck session, Congress must act before the continuing resolution expires by either passing an omnibus appropri-

ations bill or passing another continuing resolution and delaying further action until 2011. Woodall said NCBA will carefully watch legislation to fund conservation programs critical to cattle producers as well as research funding that enables our industry to improve genetics, as well as animal health and management practices. Deciding how to handle the Bush-era tax cuts, in addition to numerous other tax credits that are set to expire at the end of 2010, could potentially be the most contentious

issues the lame-duck Congress considers. Debate is expected on whether the tax credits should be extended for all tax brackets or just some tax brackets. In addition to research and development tax credits, ethanol tax credits and import tariffs are also set to expire at the end of the year. NCBA supports allowing the ethanol tax credits and import tariffs to expire in order to level the playing field with cattle producers and other industries whose primary input expense is corn.

An Ill Wind

Cattlemen were well entrenched along the Smoky Hill River by the summer of 1871. Abilene had dominated the cattle market since drovers first arrived in 1867. The lush grasslands of central Kansas provided a perfect setting to fatten trail hardened cattle before shipping to market in the fall. However, the citizens of Abilene were anxious to move beyond their cattle town reputation. Texans began to look for other markets. As Abilene began to push the cattle trade away during the 1871 season Ellsworth inherited the Kansas Pacific Railway's cattle market. The Kansas Pacific bought the stockyards at Ellsworth and expanded them. By July 14, 1871, thirty thousand head of rangy Texas Longhorns were grazing over the Smoky Hills surrounding Ellsworth. More cattle were arriving every day.

According to Joseph McCoy, the founder of the Great American Stock

Yards in Abilene, fully six hundred thousand head of Texas cattle arrived in Kansas in 1871. The season had been a rainy one. Early good grazing turned to washed-out grass with little nutrition. Unlike previous years on the plains, the cattle lost weight. Buyers weren't interested in the poorly conditioned cattle. To make matters worse, severe storms had resulted in numerous stampedes, wearing out both man and beast. Three hundred thousand head of cattle were unsold at the end of the season. Drovers chose to hold their cattle on the dry buffalo-grass range of western Kansas and Eastern Colorado. Some drove north to the river bottoms of the Platte River. Ellsworth reported that eighty thousand head of cattle were being prepared to winter over in Ellsworth County. In November, a severe rainstorm set in, followed by a cold wind which froze the water. The grass became covered

with a sheet of ice two or three inches thick. A furious gale blew for three days and nights. Many men and horses were frozen to death and thousands of cattle perished.

The storms continued to crawl across Kansas one after the other. M. C. Davis, editor of the Ellsworth Reporter, lamented that, "... it seemed impossible for any living creature to survive one night's siege on open ground." George Hoffman set out in the storm to find his cattle. They had found shelter along the Arkansas River in Barton County but unfortunately they had drifted in with a buffalo herd. The lone cowboy attempted to separate the cattle, riding to exhaustion with little effect. In desperation he began to shoot the buffalo. With a herd of cattle to tend to, Hoffman made a deal with an Indian to skin the buffalo for half the hides. The ordeal turned out to be a turning point as the hides yielded a sizable return that gave his enterprise a new impetus and while other cattlemen suffered severe losses during the winter the cowboy's luck grew with each day. While camped at the abandoned site of Fort Zarah near present-day Great Bend Hoffman met a party of hunters from Council Grove. They had heard of the great buffalo herds on the Kansas plains and had come to the "Big Bend" of the Arkansas River to get

meat for their families. Unfortunately they were having little luck for they had no knowledge of the "art." Hoffman was no beginner for he had spent several years on the frontier. He confidently volunteered to help them out and expertly brought down eleven buffalo. When offered pay he refused. The novice hunters suggested that their people write to him occasionally. However, knowing that mail delivery was not dependable on the plains, Hoffman again declined. The men were of some devout religious sect and proposed that they pray for him. Hoffman graciously accepted, adding that although he might not be worthy of it, he felt that it would do him no harm. Hoffman survived the winter of 1871, built a thriving cattle business and eventually owned a bank in Little River. He once distributed a car-load of coal to keep needy families warm in Little River. In 1913, Hoffman contributed to the Congregational Church and made his

checks out to "Jesus Christ." When questioned how they were going to cash those checks parishioner Ned Hodgson explained, "He owns the bank. He can certainly cash his own checks."

It is said that "an ill wind blows nobody any good," but for one young cowboy a November wind in 1871 was the beginning

of a very good life.

Homeground & Other Geographies by Tom Parker

Impressions High and Low

Years ago, an outside group was hired to critique the visual impact of our town from the perspective of tourists or travelers. The motive was to gauge a first impression minus the veil that familiarity invariably casts over our immediate surroundings.

Some reciprocity was required. I can't remember who was chosen but I thought the process enlightening. Constructive criticism without snobbery or placation could provide an excellent base for urban renewal if such criticisms were followed through or acted upon. They weren't, of course. Reading the final report generated a plethora of head-nodding and affirmative grunts, and one or two areas were targeted for clean-up, but other than that the report was filed away and never mentioned again.

But the idea had merit. After all, we never get a second chance to make a good first impression, and most of us are proud of

where we live.

I was on the city council at the time and now I am not and much prefer the latter over the former. After almost two terms in office, I wondered how much of my personality had been influenced by the position. I'm happy to report that I missed it not a shadow nor a smidgen, preferring what I call freelance citizenry.

It was in that unofficial and ambiguous category that I was called to arrange a photo shoot of our town square for an upcoming book on the Eight Wonders of Kansas. Our square is round—the only one in the state—which might sound like a play on words but isn't. It really is round—so round, and so broad, that only an aerial view does it justice. Which is exactly what the photographer had in mind.

When the shoot was suddenly moved up, I scrambled to arrange the logistics from getting the square lined with flags to arranging

a suitable helicopter landing site. Thanks to a network of active residents, it was done almost without breaking a sweat.

The following morning I met Harland Schuster, a freelancer from Morrill, at the high school. The helicopter was a tiny thing with barely room for two. Wary of the blades, I positioned myself about fifteen feet away when the pilot started the props. The backwash was ice cold and I wished for gloves and a hat which I, of course, didn't have. Harland slipped on a headset, buckled his harness and bowed his head for a moment in what looked like fervent prayer and then the engine revved and the skids lifted above the grass and the machine was airborne. It banked nose down with the sun glinting off the glass dome and his wife followed it with her camera snapping away furiously, hair billowing from the prop wash and the grass flattened out as if a giant hand ruffled the sur-

face. Harland's left hand extended in a wave and he was gone.

I was more than a little jealous. My wife and I rushed across the practice field to the car swapping a wide-angle lens for a telephoto and tore off like escaping bandits. By the time we reached town the copter had circled several times and people were on the square waving their American flags and looking up. A fireman had brought a fire truck festooned with flags and more flags wafted from every light pole ringing the square three to a pole which made for a lot of flags. A lot of color to compete with the flaming maples and azure sky. From our grounded perspective it made a good impression.

The copter circled and disappeared behind buildings and hovered stationary above the central flag pole. Several newspaper reporters were there and a dozen or so people, some dressed in military uniforms and one in Red Hat finery, even a few kids who watched the helicopter with keen interest. Vehicles entering the square paused as if uncertain over the hullabaloo. Several drivers peered from their windows craning their necks to see what everybody was looking at and then stared dumbfounded at the flags and the people running around and the low-flying helicopter. It was like a big party but without ice cream and cake.

I nailed a few good shots of Harland hanging out the

open door and then the chopper banked and disappeared behind the old limestone laundromat. For a few minutes we all stood there wondering if he was coming back and then decided he wasn't. Everybody was grinning like mad fools.

It came to me then that maybe we were looking at it all wrong. It's not outsiders we need to impress but ourselves. Tourists are ephemeral. It's nice when they come in and spend money, and we want them to have favorable memories of their time among us, but we who remain have only ourselves to answer to. The fire truck, the flags, the residents who turned out, were the real essence of rural Kansas. I was deeply impressed.

Low-Stress Genetic Selection

With the increasing number of factors that must be considered by cow-calf managers today, a bit of simplicity can be a welcome reprieve.

Your job: Select inputs that improve profitability OR make life easier for all in the operation.

Our job: Provide bulls that give you BOTH.

Others talk efficiency, we deliver it.
Ask for mature cow weight, height and body condition score data.
Ask for breeding info and udder scores on each female in the herd.
Ask for docility scores.
Ask to see cows over ten years old, still proliferating genetics for longevity.

For 106 years, we have used this information along with Expected Progeny Differences to improve our bulls' gain performance and carcass merit while maintaining fertile, easy-calving, long-lasting cows that have proven their worth in a variety of regions and environments.
Outputs divided by inputs: this is the TRUE gauge of beef cow efficiency.

So take the stress out of bull selection. Rest assured that—Lot 1 or Lot 111—you'll find "do-it-all bulls" that will improve profitability on the range, in the feedlot and on the rail.

That's the Dalebanks Difference.

Colder weather may attract brown recluse spiders into your home

With colder weather arriving, you may find some unwelcome visitors in your home: brown recluse spiders.

"Brown recluse spiders are often hard to spot," said Richard Houseman, University of Missouri Extension entomologist. "They like warm, dry places where they are unlikely to be found. Unfortunately, harmless spiders are often mistaken for the poisonous brown recluse."

Wolf spiders, which are nonpoisonous but can be scary-looking, are more likely to wander into your home. Many wolf spiders are large and hairy and therefore easy to distinguish from brown recluses, but smaller wolf spiders can be harder to tell apart.

The brown recluse has a dark brown, violin-shaped marking on a tan to light

brown body, with the narrow neck of the violin pointing toward the bulbous abdomen. Adults have a leg span about the size of a quarter. Wolf spiders don't have the violin-shaped marking, but some have stripes down the back.

Brown recluses may be found indoors inside shoes or dressers, in showers and tubs, underneath furniture, in stacks of clothes and the sheets of infrequently used beds, or behind baseboards.

You can prevent spider bites by shaking out clothing or shoes before getting dressed, inspecting bedding and towels before use, and wearing gloves when handling firewood. Remove bed skirts and storage boxes from underneath beds and move beds away from walls.

The brown recluse is

nocturnal and prefers food such as crickets, cockroaches and other soft-bodied creatures. Brown recluses cease their wanderings at first light.

Glue boards (or sticky boards) are a good way to survey for brown recluse infestation in your home. You can buy glue boards at

most grocery and hardware stores. The best glue boards for capturing brown recluses are thin and without a raised edge. Use 15-20 glue boards in a standard home.

If bitten, remain calm and seek immediate medical attention. Apply an ice pack directly to the bite

area to relieve swelling and pain. If possible, collect the spider for positive identification by a spider expert. A plastic bag or small jar or vial is useful and no preservative is necessary.

The bite of the brown recluse can be painful but is rarely fatal. An effective commercial anti-venom is

not available. Some doctors administer high doses of cortisone-type hormones. Treatment with oral dapsone, an antibiotic used mainly for leprosy, might reduce the degree of tissue damage, but an effective therapy has not yet been found in controlled studies.

Smoke modeling tool for Flint Hills burning could benefit grassland managers

Prescribed burning in the Flint Hills has significant economic benefits to grassland managers, but can also potentially cause air quality problems at times. This is especially troublesome for large metropolitan areas such as Kansas City and Wichita because so many people are impacted. This dilemma is well known, and has been difficult to resolve. New modeling tools and decision support systems being developed at K-State could help reduce the potential for air quality problems while still allowing for timely prescribed burning of the Flint Hills. This voluntary system will be field tested during the spring of 2011 in selected areas of the Flint Hills, as part of the State of Kansas Flint Hills Smoke Management Plan. This test will be the start of a validation and refinement period of the new system that should last about two to four years. The system could then be finalized and operational in about five years, if all goes well.

The decision support system (DSS), developed by Doug Goodin and colleagues in the Department of Geography at K-State, is based on V-Smoke, a smoke plume transportation model used by the U.S. Forest Service. That model attempts to predict where a large plume of smoke will go on a given day,

based on environmental conditions and other factors. The DSS from K-State uses V-Smoke, along with data on forage biomass conditions on the ground and historical burn patterns in specific counties, to predict how much burning may take place on a given day, how much smoke could occur, and the direction the smoke plume is likely to move.

K-State's DSS model will be run daily during April, with the results issued as a series of advisories for specific counties, or sections of counties, in Kansas. If the DSS model results suggest that burning in a particular location is likely to cause smoke plumes to move over a large metropolitan area, it will flag that location as an area of concern. This will provide burn managers with additional information for deciding whether burning at that location should be recommended. Starting in April of 2011, K-State Extension and others will be asking grassland managers to check the DSS website starting at 6:00 a.m. the morning before a prescribed burn is planned. (The web site is still being refined and does not yet have an address, so cannot be viewed at this time. K-State Extension will notify landowners and managers when the web site is up and running.) If the web site flags a location as an area of concern, we hope

grassland managers in that area will consider calling off the burn that day and waiting for the next opportunity.

The DSS model is part of the State of Kansas Flint Hills Smoke Management Plan, and it is important to the KDHE and the EPA that the state has such a plan and that it is effective. If grassland managers are making a good faith effort to follow the smoke management plan, it is hoped that this will eliminate the occasional "exceedance," a day on which smoke from Flint Hills burning has caused the ozone levels to be higher than the National Ambient Air Quality Standards (NAAQS). Adjusting burning plans to take into account the information provided by the DSS model will be voluntary for now. If smoke from prescribed burns continues to result in air quality exceedances in urban areas, contingency plans outline a more regulatory plan. Whether compli-

ance remains voluntary depends in part on how well the DSS model advisories are accepted by grassland managers in the Flint Hills.

Depending on when the new web site becomes operational, grassland managers can expect to receive more information over the winter and early spring about the new web-based advisory smoke management system from K-State. They will be made aware of how the system will work and the importance of following the voluntary advisories. If all goes well over the next few years, the system will be followed by grassland managers and will keep smoke from causing ozone exceedances in metropolitan areas in Kansas (note: EPA may add more cities than Kansas City and Wichita to the ozone watch list in the future). If this voluntary system is successful, any type of mandatory regulations on prescribed burning in the Flint Hills may be avoided.

Recipes sought for 2011 National Festival of Breads

The popular "Festival of Breads" baking contest, a Kansas tradition for more than 15 years, continues its presence as a national amateur bread-baking contest with the second National Festival of Breads, co-sponsored by the Kansas Wheat Commission, King Arthur Flour and Fleischmann's Yeast as a co-sponsor.

Entries can be made online now at www.NationalFestivalofBreads.com.

Amateur bakers have until February 7, 2011 to enter this biennial competition, in Wichita June 23-25, 2011.

The Kansas Festival of Breads was established in 1990 to provide a way to recognize Kansas' best bread bakers. Until 2007, the biennial competition proved that dozens of men, women and children from across Kansas were champion bread bakers. The contest was expanded nationwide in 2009, garnering more than 500 recipes. Eight finalists were chosen to prepare their recipes at an event in Wichita.

"There are many talented home bakers across the state. It would be fantastic to see a Kansan bake their winning recipe, along with seven other finalists in Wichita next June," says Cindy Falk, nutrition educator and chairperson of the contest.

U.S. residents age 18 and older may go online to enter their yeast bread recipes that feature King Arthur Flour and Fleischmann's Yeast, both of which are major sponsors of the National Festival of Breads. There are four categories: ethnic breads, rolls, time-

saving and easy breads, and whole grain breads. New this year is a category for best yeast bread shaping or sculpting. Submissions for this category require the recipe and a digital photo of the bread, both of which may be submitted via the online form.

Recipes will be reviewed, test-baked and evaluated on taste, originality, ease of preparation, healthfulness and appearance. Eight finalists will be selected for the National Festival of Breads in Wichita, June 23 - 25. Each finalist receives a \$500 cash award, participate in a Wheat Harvest Tour to a working Kansas wheat farm, flour mill and grain elevator, and participate in other activities.

The public is invited to watch the finalists bake their recipes on-site at the festival on Saturday, June 25, 2011. Other National Festival of Bread activities that day include baking workshops, a miniature trade show, bread tasting and door prizes. These events are free of charge to the public.

Meanwhile, judges will evaluate the finalists' yeast bread entries and one grand prize winner will receive an all-expenses-paid trip to a baking class of his or her choice at the King Arthur Flour Baking Education Center in Norwich, Vt., a year's supply of Fleischmann's Yeast, plus \$2,000 cash.

Additional information, past recipes and a summary of the 2009 contest are available on the official contest website, www.NationalFestivalofBreads.com.

REAL ESTATE AUCTION

THURSDAY, NOVEMBER 18 — 7:00 PM

Auction will be held in the 4H building at the Republic Co.

Fairgrounds in **BELLEVILLE, KANSAS**

Grandin

Continued from page 1

the movie is that it has allowed her to educate those who are so far removed from the farm about general livestock production practices. Grandin said that when she was on the Hollywood press tour promoting the film, in one press conference the general Hollywood reporters kept asking her about livestock and simple animal care and slaughter. She said they had to limit those questions and turn it back to the producer to promote the movie.

“The Hollywood reporters are curious and hungry for that information. They were asking me curiosity questions such as how does a feedlot run or how is a stun gun used. We need to give them that information and it needs to be the correct information. It’s important to come directly from farmers and ranchers.”

Her expertise in animal handling and livestock slaughter facilities has led

her to be a consultant with restaurants such as McDonald’s, Wendy’s and Burger King. She has worked with these fast-food giants on animal welfare audits.

“Animal welfare was so abstract for the executives of these companies. They turned it over to their lawyers or their PR people to handle. Then it became real to them when they actually toured the farms or packing plants.”

She challenged ag producers in the audience to show what they do as good stewards of animals including how they take care of them in less than ideal weather conditions. She encouraged farmers and ranchers to use various forms of social media (blogs, YouTube, Facebook, Twitter, etc.) and the internet to let the general public know what really happens at a farm or ranch.

Grandin’s candor and her unique and simple but insightful lecture style earned her a standing ovation from the Union Forum Hall participants. During the ques-

tion and answer segment of the program, she didn’t want to get political, but said we need to be having a civil discussion, not the extremes that are often exaggerated.

“Right now, we have a lack of critical thinking; what happened when we were actually doing things? I grew up when the Republicans built the Interstate highway systems and the Democrats got us to the moon. I want to force students or people who make policies to dig for information.”

According to her website, www.grandin.com, she obtained her B.A. at Franklin Pierce College and her M.S.

in animal science at Arizona State University. Grandin received her PhD in animal science from the University of Illinois in 1989. Today, she teaches courses on livestock behavior and facility design at Colorado State University and consults with the livestock industry on facility design, livestock handling, and animal welfare. She has appeared on television shows such as 20/20, 48 Hours, CNN Larry King Live, PrimeTime Live, the Today Show, and many shows in other countries. She has been featured in People Magazine, the New York Times, Forbes, U.S. News and World Report,

TIME Magazine, the New York Times book review, and Discover magazine. Interviews with Grandin have been broadcast on National Public Radio. She has also authored over 400 articles in both scientific journals and

livestock periodicals on animal handling, welfare, and facility design.

Her most recent accomplishment is being named by TIME Magazine as “One of the Most 100 Influential People of 2010.”

FARM EQUIPMENT AUCTION

SATURDAY, DECEMBER 4 — 10:00 AM
2157 Eagle Road — BEATTIE, KANSAS 66406

Research team receives patent for method of genetically engineering soybean plants to control destructive parasite

A recently patented invention from a Kansas State University research team aims to control a devastating parasite that causes millions of dollars in crop damage each year.

The invention, "Compositions and Methods for Controlling Plant Parasitic Nematodes," was developed by four K-State researchers: Harold Trick, professor of plant pathology; Timothy Todd, an instructor of plant pathology; Michael Herman, associate professor of biology; and Judith Roe, former assistant professor of biology.

The researchers focused their work on the soybean cyst nematode, a destructive parasite that attacks the roots of soybean plants. Farmers across the country lose nearly \$860 million every year because of the nematode. Kansas isn't exempt from the parasite: Todd said that every eastern and south central Kansas county that produces soybeans has soybean cyst nematodes.

"Trying to solve the problems with soybean cyst

nematodes would be huge and very beneficial to U.S. farmers," Trick said. "Getting a handle on it is important."

Through genetic engineering, the team engineered soybean plants with specific traits, so that when nematodes feed on the roots they ingest these traits that turn off specific nematode genes.

"What we did was target genes that we thought would be vital for the nematode to survive," Trick said. "If we could turn these nematode genes off, we essentially can kill the nematode and provide the plant with protection."

For the patent, the research targeted three genes: MSP, or Major Sperm Protein, which causes nematode sperm to move; Chitin synthase, the gene that helps form the eggshell on nematode offspring; and RNA Polymerase II, which is vital for RNA production.

By controlling these three genes, researchers were able to halt the reproduction of the nematodes and saw a 68 to 70 percent

reduction in the presence of soybean cyst nematode. The team was also careful to prevent any negative off-target effects, or ways that the altered genes could negatively affect the soybeans or animals and humans who ingest the soybeans.

While the patent is very valuable for soybean production, it has also opened the way for further beneficial research. Since the work on the patent, Trick and Todd have continued similar research on 20 different kinds of gene sequences in other plant and nematode species. They are taking the same method of destroying the soybean cyst nematode and applying it to nematodes that affect plants such as wheat, toma-

toes and pineapples.

Trick and Todd have been supported in their research by funding from the Kansas Soybean Commission and the United Soybean Board. They are in the process of filing for additional patents for some of their inventions.

"With this technology — it may not be the genes under the patent, and it may be other genes that we find or someone else finds — we're hoping to produce plants with durable resistance to parasitic nematodes," Trick said.

The patent is the eighth patent that K-State has received this year. It was issued earlier this year to the Kansas State University Research Foundation, or KSURF. The foundation is a

nonprofit corporation responsible for managing the technology transfer activities of the university.

The research foundation is working with the National Institute for Strategic Technology Acquisition and Commercialization, known as NISTAC, to li-

cense the patent, said Marcia Molina, foundation vice president. NISTAC is involved with the expansion of technology-based, high growth enterprises and helps with the commercialization of intellectual property from K-State researchers.

Prime Hunting & Tillable SW of Wellington, KS

MINERALS OFFERED SEPARATELY WILDLIFE HABITAT

AUCTION: Mon, Nov 29 - 7pm

Theurer Mktg Ctr, 802 E 16th, Wellington, KS

BAXTER BLACK

ON THE EDGE OF COMMON SENSE

“Be Careful And Don’t Get Hurt!”

Joe Camacho is a cage fighter. Can you imagine his mother saying, as he goes off to fight the front line of the Oakland Raiders, “Be careful, Joey, and don’t get hurt.”

I caught myself giving that same instruction to my son as he went off to his high school soccer game. As a soccer veteran over the years he’s already had a succession of concussions, sprains, cracks, pulls, punches, cracks, whops, whacks and smashes! “I will,” he said, as he limped out the door.

I’ve tried to get him to consider a safer sport like bull riding, destruction-derby driver, or competitive whip-cracking for

speed and distance. He’s thinking of joining the Marines, which will be a relief after four years of soccer.

However, anyone who has a loved one in the cattle business knows the feeling. As he heads out the door he says, “I’m going out to the east side, there’s still three cows in the (poison oak, cholla, blackberry, beau d’ arc, palmetto, quicksand, rock slide or swamp; take your pick).”

“Okay, dear. Be careful and don’t get hurt.”

They mean well. Those that worry about us. And, they aren’t just saying it, they hope you don’t get hurt. But the odds are against them. I don’t be-

lieve you can spend your life, even part-time, associating with large herbivores, which includes horses, llamas, big horn sheep, mountain goats, maybe even rhinos and camels, and not pay a physical price.

And, anyone who spends time with large carnivores probably has a thicker skull than cowboys. Do the names Siegfried and Roy ring a bell? Animal Planet has an entire series called Fatal Attractions wherein owners have been mauled by bears, wolf-dogs, chimpanzees, monitor lizards and Bengal tigers.

“Where are you going, honey?”

“Oh, I’m just taking my pet leopard for a walk.”

“Well, be careful and don’t get hurt.”

It is true that those of us who keep getting up every day and going out to feed, gather, work, ride, doctor, move or otherwise pester our domestic livestock, know deep-down that accidents happen. The scars on our bodies, old x-rays, slings, crutch-

es, bandages and wheelchairs we keep in the garage are sort of a scrapbook of our injuries. Thing is, we don’t worry about it. It’s just part of the job. We wake up stiff and sore. Something is always hurting or aching or bandaged or blue. It is the guaranteed result of the combination of manual labor and unpredictable chaos. It also affects the way we deal with our animals and our children. The calf gets roped and branded. Does it hurt? Of course it hurts! But they get over it quickly. When your kid skins her knee, does it hurt? Of course! But she gets over it.

And when Joe Camacho walks out of the fighting cage looking like someone has beaten him with a bag full of coconuts, is he hurting? What do YOU think? But he’d rather do that than sit in a toll booth on the turnpike for eight hours a day. And I guess, I would too.

Anyway, be careful Joe, and don’t get hurt ... too bad.

• MARKET DEVELOPMENT

For more information visit sorghumcheckoff.com

"It's good to see the Sorghum Checkoff dedicate checkoff dollars to market development, which is where I've seen the most obvious results so far. We have already seen foreign purchases increase and addressed domestic market issues. These are excellent examples of how the checkoff is spending producer dollars to increase sorghum farmers' profitability."

ROCK CREEK RANCH Steve and Cathy Hamlin • Douglass, Kansas COMPLETE HERD DISPERSAL

November 27, 2010 • 11:00 am CST

To be held at El Dorado Livestock Auction, El Dorado, Kansas
2 1/2 miles east of El Dorado, Kansas On Hwy. 54

Because my wife and I have decided to sell our ranch we will offer our complete herd of registered and commercial Angus and Black Simmental cattle at auction. We will be selling fall and spring calving cows, bred heifers, heifer yearlings, heifer calves and bulls. **EVERYTHING SELLS!**

FALL HERD consists of:

- 70 head registered and commercial Angus 1st calf heifer pairs. Many of the heifers will be AI sired out of Strategy and Image Maker. Heifers were synchronized and AI bred one time to Mainline then cleaned up with registered Angus 1/2 brother bulls. All the calves will be worked and tagged to the cows. These are big, stout heifer pairs weighing in 1300# range.
- 220 head registered and commercial Angus cows with calves at side. Cows will be 3-10 years old as follows:
- 3 years - 40 head, 4 years - 35 head, 5 years - 40 head, 6 years - 45 head, 7 years - 40 head, 8-10 years - 20 head.

Many of the cows will be AI sired out of 616, VDR, Lead On, New Level, and Strategy. The cows were synchronized and AI bred one time to Foresight then cleaned up with registered Angus bulls. The calves have been worked and are tagged to their mothers. Cows will sell open.

- 160 purebred Angus yearling heifers, calfhood vaccinated and palpated, ready to breed. These heifers will make a great set of cows. Heifers will weigh 800-850#.

SPRING HERD consists of:

- 40 registered Angus bred heifers. Several heifers will be AI sired out of Foresight.
- 50 commercial Angus bred heifers. Several heifers will be AI sired by C.E. Deluxe and N Bar Prime Time.
