Grass & Grain responds to pending changes in mail delivery by offering print subscribers free access to online edition

By Donna Sullivan, Editor

The planned closure of hundreds of postal sorting centers throughout the United States will significantly impact delivery of periodicals, including Grass & Grain. First class mail will no longer be delivered in one day, and periodicals could be delayed by an extra one to two days. Readers who are accustomed to receiving their paper on Tuesday will likely receive it on Wednesday or Thursday.

Understanding that his readership relies on receiving the material within its pages, Grass & Grain publisher Tom Carlin made the decision to be proactive in dealing with the situation and will now offer the online version of the paper to paid print subscribers at no additional charge. They will still receive the print version of the paper as well, with the online version just giving them an additional option.

"We will meet with postal officials and do everything in our power to smooth the way in helping them get newspapers to subscribers in as timely a manner as possible," Carlin said. "But we are well aware that our readers rely on Grass & Grain for information and would be severely impacted if they had to wait until later in the week to receive it."

A new benefit to the online version is that it will be made available on Mondays

at noon, a full twenty-four hours sooner than before. "Those of us at Grass & Grain believe it is important to be proactive in ensuring subscribers receive the best possible service under the new conditions," Carlin reiterated. In an effort to make the online version more user-friendly, it was completely redesigned and will no longer require downloading PDFs. Access will be fast, easy and without delay. It will look and read exactly like the print version and will even include live links to outside websites and email addresses.

In order to receive Grass & Grain digitally, subscribers must provide a current email address. This can be done at www.grassandgrain.com. Simply click on the green button on the right-hand side of the screen and follow the directions. It could take up to one week for the online account to be set up once the information is received at Grass & Grain. An email will be sent out each Monday when the online version becomes available and archived editions of the paper will still be found on the Grass & Grain website.

"We realize there will be a period of adjustment for all concerned," stated Carlin. "But we are committed to delivering Grass & Grain to you as efficiently as possible, just as we have since 1954."

Grass & Grain's digital edition offers many features and benefits

- Looks and reads just like the regular newspaper •
- Fast and easy access • No delays in delivery • Available Mondays at noon •
- Links to outside website and email addresses •

Go to www.grassandgrain.com, click on the green button on the right-hand side of the screen and provide your email address. Set-up could take up to one week. *You will still receive the print version of Grass & Grain.*

Moran disappointed in recent Senate delay of postal legislation

U.S. Sen. Jerry Moran (R-Kan.), expressed disappointment in the Senate's consideration of S. 1789, The 21st Century Postal Service Act of 2012. The Senate voted against bringing up postal legislation for debate by a vote of 51-46 on March 27.

"I am disappointed the Senate has again delayed consideration of postal legislation that would help address the U.S. Postal Service's (USPS) financial troubles," Moran said. "Without reform, the USPS will start closing post offices on May 15 and will not be able to stay in business beyond September. With these deadlines quickly approaching, it is critical that Congress considers postal legislation soon."

Moran authored an amendment that was included in The 21st

Century Postal Service Act of 2012, that would require USPS to set minimum standards of service and alternatives to closure that must be considered prior to closing any post office. Upon the bill's enactment, Moran's amendment would prevent the closure of any post offices, including those in Kansas, until those standards are in place and are considered in each case.

The Postal Regulatory Commission has found that maintaining rural post offices only amounts to 0.7 percent of the Postal Service's budget. Therefore, reducing service to rural communities will have little benefit to the USPS' bottom line.

Moran is a member of the U.S. Senate Homeland Security and Governmental Affairs Committee, which has jurisdiction over the Postal Service.

I am fairly slow to anger, and it takes quite a bit to light my fuse. But an ad on the radio really lit it earlier this week. The ad was for a local grocery store that specializes in organic foods. Don't get me wrong, I have no problem with my fellow producers who choose to produce organic crops. It is an excellent business model, a good way to add value and a lot of work. However, this grocery store ad stated that their food was grown in a responsible manner.

The use of the word responsible is what got under my skin. I was hot, dirty and tired from walking pasture fence all day. I have to admit, I felt like a very responsible rancher. However, the rest of the drive home I started thinking about all the responsibilities I have as a producer of the food we all eat.

First, I am responsible to the animals I raise. Do not misunderstand me, the animals I raise are for food, but that does not limit my responsibility to them. I provide my animals the highest quality feeds in the right amounts. This is done through a combination of the education I received and experience. All of my animals are proved a well balanced diet and in the right proportions. Yes, my animals are fed GMO crops raised with modern, safe agriculture herbicides. These crops provide a safe, abundant food supply for my animals and I am proud to use it.

I also have a responsibility to provide them with the best care I possibly can. This means I spend many hours caring for them, in all weather conditions. If they require treatment for a medical condition I provide it. If they require more care than I can provide, I call my veterinarian. Because I feel a responsibility to my animals, I do not hesitate to utilize the best in modern antibiotics. I cannot stand to watch my animals suffer needlessly if the proper medicine is available.

However, those antibiotics are seldom used on our farm. We pay close attention to preventative measures and rarely have to treat sick animals. Often the antibiotics we stock expire and we have to dispose of them rather than use them. Proper animal husbandry prevents many ailments, but like humans, they do get sick in spite of the best care. In those rare cases I will do what it

takes to help heal them.

The next responsibility I have is to the consumers of the food I produce. I am responsible to produce a safe, wholesome product and that is exactly what I do. I feed my family the same food I sell to your family. I would never even consider raising a crop or animal that I had any doubts about being safe to eat.

I also feel a sense of responsibility to produce as much food as I can with the land and livestock I have been blessed to oversee. Farmers and ranchers are a dwindling population charged with producing more food on fewer acres for a rapidly growing world population. To do this we must utilize the best in innovations in agricultural science, tools like GMO crops, herbicides and fertilizers allow us to produce more food on those decreasing acres of farmland.

Finally, I feel a sense of responsibility to my family. I am responsible to the generations who have farmed the land before I came along. They weathered tough times and passed the land and the love of agriculture to me. They did the best they could with the technology they had to take care of the land. It is now my duty, my responsibility to utilize the advantages I have been given.

We have learned how to use methods such as no-till to save the topsoil. We couldn't plant our crops no-till without GMO crops and herbicides. We continue make strides toward using less herbicide and fertilizer while producing more grain each year. This will leave the land in better shape for another group I am responsible too, future generations of ag producers.

This is a very short list of the things and people I am responsible to as an ag producer. I know my fellow farmers and ranchers feel the same way. The idea that utilizing the best in modern technology available does not make us responsible producers of food is not right. I believe that most of the farmers and ranchers I know are producing food in a manner that is responsible to the consumer, the livestock they own and the land they utilize. So go to Dillons, Hy-Vee or any other supermarket and rest assured, the food you buy was raised in a responsible manner.

By Meghan Mueseler,
Wichita

"I believe in the future of agriculture, with a faith born not of words but of deeds," are not only words penned by E.M. Tiffany in the FFA creed but, for many of my friends and colleagues, is their life motto.

A recent Yahoo! News headline read, "Want to make sure you don't pick a dud of a degree? Check out our list of most useless degrees."

1. Agriculture
2. Fashion Design
3. Theater
4. Animal Science
5. Horticulture

What? That must mean I am twice as useless because I have an undergraduate degree in Agricultural Economics with a minor in Animal Science and masters in Agricultural Education! One blogger, in response to the report, posted about how she was positive that the writers of this Yahoo! Article probably enjoy eating food and use some type of agricultural by-product on a daily basis, making this report a complete hoax.

I think back to my own decision to choose agricultural as a career, because in my case it really was MY choice. My mom, dad, nor my older sibling had chosen agricultural as a career. I was the first generation to K-State and to major in agricultural to boot! Why did I make that choice? For me the reason was and is simple, the people. It has and will always be about the people that have influenced me over the years that later would fuel my desire to choose agricul-

ture as a career.

This weekend I was blessed with the opportunity to be part of a ten-person relay team where we completed a little over 44 miles between Kansas City and Lawrence. Our connection and our pas-

Prairie Ponderings

By Donna Sullivan

I always used to say that if I could have frozen time it would have been right when my youngest child started sleeping through the night. The two older kids were old enough to be helpful but still young enough to think I knew everything and their dad was a superhero. Their younger brother was three, which is such a fun age, and there was still a baby to love up on and play with.

A wonderful lady we went to church with heard me make my "freezing time" comment once, and countered it with one of her own. "Every stage of life I've been in, I've always thought, 'this is just my favorite stage,'" she said. And I believed her. It was a simple philosophy that truly impacted my life.

The years flew by, the kids became teenagers, who although still relatively helpful, began to realize that I didn't really know

sion? Beef... the fuel for the finish! I could not have picked a better group of individuals to run with on a warm Kansas day. You don't get this everywhere. You don't get this experience without agriculture!

I not only chose a career when I entered K-State as a Freshman in agriculture... I chose a lifestyle, a passion, an industry that will feed the world this year and the years to come.

No useless degree here!

everything and their dad couldn't leap tall buildings in a single bound. We didn't always see eye to eye and butted heads frequently, but still managed to make memories and fill our house with love and laughter. I realized that I wouldn't trade those years for anything in the world.

Then the last one left home. I spent a couple of months in mourning, believing that my most favorite time in life was over. Even recalling my dear friend's philosophy didn't help much. But I eventually got over it and realized that since I still seemed to be breathing, God must have plenty left for me to do.

Then the grandchildren started coming. The other night my husband and I watched all three of them for a couple of hours. The baby cooed and smiled for a bit, then took a bottle and fell asleep. The two toddlers dug in my flowers and the older of the pair showed the younger the finer points of eating dirt. As I watched them I thought, "This is just the best stage of life." A stage I would have missed if I could have frozen time.

The dear lady from church is in a nursing home now, not always sure where she is or why she can't go home. It hurts to see her like that - someone who lived a good life, served God and her neighbors, and taught young mothers like me to appreciate every moment, every stage of life.

Is this her favorite stage now? Maybe not. But it's good to know that it is temporary and the best really is yet to come.

Understanding open spaces: to celebrate prairie landscapes, researcher recommends taking an aesthetic approach

A Kansas State University researcher and former park ranger is helping people take a new view of the prairie and see it as more than a seemingly empty landscape.

Tyra Olstad, doctoral student in geography, North Tonawanda, N.Y., is studying the rich — although sometimes hidden — beauty of Kansas landscapes. It's an abstract, yet important, field of study that may help develop new ways to promote and celebrate Kansas tourism, history and geography.

"I became interested in the pejoratives that people layer on prairie landscapes," Olstad said. "I wanted to study how we psychologically interact with places and what this interaction means for the different places."

Kansas landscapes do not fit the conventional definition of beautiful scenery, Olstad said, making it difficult to persuade people that the prairie is anything but flat and dull. But if Kansans learn to celebrate the beauty and rhythm of prairie landscapes in new ways, they can deepen their own sense of place, engender local pride and promote tourism in rural communities.

It all starts with understanding open spaces. Most research in this area focuses on the aesthetics of mountains, forests or

seashores — destinations that fit the convention of beautiful scenery. Different government agencies are beginning to integrate this type of aesthetic research of landscapes into historical and tourism material.

"Researchers have come up with all sorts of ways to measure how important it is to appreciate landscapes as a whole," Olstad said. "We want to understand the aesthetics side of landscapes and not just how much you can get from the land economically or recreationally. Researchers and agencies are looking at scenery as an asset and a part of a place — a value in and of itself."

But few researchers have studied the prairie under such aesthetic guidelines. While many researchers have noted that it is hard to evaluate seemingly empty landscapes, Olstad argues that prairies are more of an experience than they are a piece of scenery.

"The prairie is an experience that you can't fit into any rubric because it is just as much temporal as it is spatial," Olstad said. "I developed a strong connection with prairie landscapes, and I am trying to translate that into some kind of wider societal appreciation."

Olstad's research encompasses several differ-

ent fields of study: scientific analysis, ecology and environmental history. She traveled throughout Kansas and visited landmarks such as the Konza Prairie Biological Station, the Tallgrass Prairie National Preserve and Mount Sunflower — the highest point in Kansas.

Olstad has spent 10 years working for the National Park Service in places such as Petrified Forest National Park in Arizona, Badlands National Park in South Dakota, Black Canyon of the Gunnison National Park in Colorado and Fossil Butte National Monument in Wyoming. For her research, Olstad worked under the direction of Kevin Blake, professor of geography, and Elizabeth Dodd, university distinguished professor of English.

Olstad looked at prairie landscapes according to several traditional styles, but noted that using such standards do not always make prairies appear valuable. For instance, Olstad studied scenic evaluations of the prairie using architectural standards and noted that by these standards, the prairie appears empty. She also took a psychological approach and concluded that psychological standards suggest that prairies often make people feel alienated.

But Olstad saw much more positive results when she took an aesthetic approach to the prairie. She took the same artistic techniques used in photography, literature and visual arts and applied them to the prairie. By doing so, she was able to find new perspectives that represent prairie landscapes in positive ways.

"People talk about photographs, images and literature and how they should tell stories," Olstad said. "So I started writing down some of my own experiences of the prairie and

taking pictures that shared these experiences."

In the process of applying artistic concepts, Olstad looked at aspects that make up the prairie — the small insects, spider webs, stones and plants — and then expanded her view to study the horizon, the wide-open sky, the sunrise and the sunset.

"You can't really fit a horizon or a sunrise and sunset in a book or photograph," Olstad said. "All you can really do is celebrate them. The more you talk about them, the more

that other people will either be curious enough to visit the prairie, or they will be intrigued enough to start sharing that with others."

That is how appreciation of the prairie can spread, Olstad said, and she hopes that her research inspires people to celebrate the prairie and look at it with new eyes.

"You don't have to go on grand adventures in Siberia or the Congo," Olstad said. "You can just look in your backyard and it's wondrous."

GRASS & GRAIN

Our Daily Bread

***** By G&G Area Cooks *****

Winner Mary Hedberg, Clifton, Shares Cake Recipe To Win G&G Contest

Winner Mary Hedberg, Clifton:
ROSY PEACH UPSIDE-DOWN CAKE
29-ounce can sliced peaches, drained
3-ounce package strawberry-flavored gelatin
3-ounce package peach-flavored gelatin
1 teaspoon cinnamon (optional)
1/3 cup margarine
1 box yellow cake mix
1 cup thawed whipped topping
Arrange peaches in buttered 9-by-13-inch pan. Combine strawberry and peach dry gelatins and cinnamon in a small bowl. Sprinkle about 3/4 of the mixture evenly over peaches and dot with butter. Mix cake mix as directed on box. Pour 3/4 of the batter into pan. Stir remaining gelatin mixture into the remaining cake batter, blend well and pour into the pan. Zigzag through the batter to marble it. Bake at 350 degrees for 45 minutes or until is done in the middle. Cool 5 minutes in pan then put onto a serving platter and cool. Garnish with whipped topping.

Kellee Rogers, Topeka
RASPBERRY WHIP
1 angel food cake, broken into 1-inch pieces
8-ounce carton whipped topping
1 cup sour cream
1 cup powdered sugar
1 pint red raspberries, well drained (fresh or frozen)
In a bowl, mix whipped topping, sour cream and powdered sugar. fold in raspberries. Place all the angel food

pieces into the bottom of a 9-by-13-inch pan. Pour raspberry mixture over the cake. Cover the pan with plastic wrap and refrigerate at least one hour.

“Our Daily Bread” Recipe Contest Prize

Set of 4 Cook, Serve & Store Plates

Includes:

- 4 divided plates (9" dia.)
- 4 Lids with easy open tabs
- Four Colors
- Durable Plastic
- Microwave & Dishwasher Safe
- Freezer Safe

The winner each week is selected from the recipes printed.

Send us your favorite recipe. It may be a main dish, leftover, salad, side dish, dessert, or what-have-you.

1. Check your recipe carefully to make certain all ingredients are accurate and instructions are clear.

2. Be sure your name, address and phone number are on the entry. Please include a street address with your recipe entries. A post office box number is not sufficient for prize delivery. Allow 3-4 weeks for delivery.

3. Send it to: Woman's Page Editor, Grass & Grain, Box 1009, Manhattan, KS 66505.
OR e-mail at: auctions@agpress.com

Melissa Byrd, Independence, Mo.:
STRAWBERRY SLUSH
46-ounce can pineapple juice
1 large can frozen lemonade, thawed
1 tablespoon almond extract
(4) 16-ounce packages frozen strawberries, thawed
Using a large bowl or empty plastic ice cream pail, mix all ingredients well. Cover and freeze. Scoop slush into individual glasses and add 7Up or Sprite.

Amy Feigley, Enterprise:
HOMEMADE FRENCH BREAD
5 to 6 cups all-purpose or bread flour
5 teaspoons active dry yeast
2 teaspoons salt
2 cups warm water
1 tablespoon butter, melted
1 egg white
1 tablespoon water
Combine 2 cups flour, yeast and salt. Stir in water and melted butter. Stir in as much as the remaining flour as you can. When the dough is done, punch down and divide in half. Turn onto a lightly floured surface. Cover and let rest for 10 minutes. Roll each half into large rectangles. Roll up, starting from the long side. Moisten the edge with water and seal. Make sure to taper the ends. Grease a large baking sheet. Place the loaves, seam side down, onto prepared baking sheet. With a very sharp knife, make 3 or 4 diagonal cuts about 1/4 inch deep across the top of each loaf. Lightly beat the egg white with 1 tablespoon water and brush onto the bread. Cover with a damp cloth and let rise until nearly doubled, about 35 to 40 minutes. Bake for 20 minutes at 375 degrees. Brush again with the egg white mixture and then bake an additional 15 to 20 minutes. Remove from the baking sheet and cool on a wire rack.

Note: If you are strapped on time, mix the dough in a bread machine This bread also freezes so you can have it for more than one meal.

Lucille Wohler, Clay Center:
BUFFET POTATOES
2 pounds frozen hashbrowns, thawed
1/2 cup melted margarine
1 cup sour cream
1/2 cup chopped onion
1 can chicken or mushroom soup
10 ounces grated cheddar cheese

Mix all ingredients together and bake at 350 degrees for 1 hour. Serves 10 to 12.

Millie Conger, Tecumseh:
ASPARAGUS & SWISS QUICHE
1 pound asparagus, trimmed & cut into 1/2-inch pieces
(2) 8-inch pie crusts
1 egg white, beaten
10 slices bacon, crisply cooked & crumbled
2 cups shredded Swiss cheese
4 eggs
1 1/2 cups half & half
1/4 teaspoon nutmeg
Salt & pepper to taste
Place asparagus in a steamer over one inch of boiling water. Cover and steam until tender but still firm, 2-6 minutes. Drain and set aside. Place pie crusts into separate ungreased pie plates. Brush pie crusts with egg white, sprinkle with asparagus, bacon and cheese. Set aside. Blend eggs, half & half, nutmeg, salt and pepper in a medium bowl, pour over cheeses. Bake uncovered at 400 degrees for about 35-40 minutes until firm. Let cool to room temperature before serving.

Debbie Rogers, Independence, Mo.:
HOT HAM SANDWICHES
1/3 cup minced onion
1/3 cup vinegar
2 teaspoons mustard
2 tablespoons Worcestershire sauce
1/8 teaspoon salt
3 tablespoons butter
1 1/2 cups brown sugar
1/2 cup water
2 pounds ham cooked & diced (good way to use leftover Easter ham)
10 buns
In a skillet combine all ingredients but ham and buns. Cook until onion is tender. Add ham and heat through. Spoon onto buns.

Hot Tips On Safe Microwave Use

(NAPSA) — You can protect yourself and your family from the dangers of food-borne, illness-causing bacteria, such as salmonella, if you heed the "Cook It Safe" campaign by the experts at the U.S. Department of Agriculture. There are four things you need to do:

1. Read and follow package cooking instructions. Most frozen or refrigerated convenience foods must be properly cooked before you can eat them. The label can tell you whether the product needs to be thoroughly cooked or simply reheated. Uncooked meat or poultry, for example, must be cooked to a high enough temperature to destroy harmful bacteria.

2. Know when to use a microwave and when not to. Sometimes, thorough cooking requires the use of a conventional oven, not a microwave. Microwave oven

cooking times may not be enough to cook some foods to a safe internal temperature. Microwave ovens — even those equipped with a turntable — can cook unevenly and leave "cold spots" where harmful bacteria can survive. You may need to use a conventional oven, convection oven or toaster oven. So always follow the package cooking instructions.

3. Know your wattage. If your microwave's wattage is lower than that required in the cooking instructions, it will take longer for the food to reach a safe internal temperature. The higher the wattage of the oven, the faster it will cook food. If you don't know the wattage of your microwave, check the inside of the oven's door, the serial number plate on the back of the oven or the owner's manual.

You can also do a "time-to-boil" test to estimate the wattage: Measure a cup of plain tap water in a two-cup glass measuring cup. Add ice cubes; stir until water is ice cold. Discard ice cubes and pour out excess water so only one cup remains. Set the microwave oven on high for four minutes.

Watch the water through the window to see when it boils. If it boils in less than two minutes, its wattage is 1,000 watts or more. If it takes 2 1/2 minutes, its wattage is about 800 watts or more. If water boils in three minutes, its wattage is 650 to 700, and if it takes more than three minutes, it's 300 to 500 watts.

4. Always use a food thermometer to ensure a safe internal temperature. After the microwave or conventional oven cooking time is over, observe any "stand time" specified in the cooking instructions. During this time, the food continues to cook even with the oven off, and the temperature of the food continues to rise. No matter how you've cooked the food, use a food thermometer in several places to make sure the dish has reached a safe internal temperature.

You can learn more at www.fsis.usda.gov/Food_Safety_Education/Cook_It_Safe/index.asp and www.fsis.usda.gov/PDF/Microwave_Ovens_and_Food_Safety.pdf.

My Spring Affair

By Lou Ann Thomas

This early spring has meant I'm already mowing my grass. I don't mind mowing, at least not the first few times. It feels like the blush of new love when I drag my mower out of the corner of the shed where it has sat quietly all winter.

With the first tug of the rope a grinding sound comes out of the mower as it tries to wake up. I tug again. Nothing. I cuss a little and pull again. A cough and then silence. The mower is toying with me. I check all the connections and pull again. Another cough followed by a puff of black smoke. I cuss more and louder and remind myself I will not

let a silly mower make me cry. It will not break me! I check everything again and pull the rope one more time. The mower teases me with a sputter and I let out a victory yelp as the engine coughs again...then dies. I try not to hurt my foot when I kick it, but I do, and I can feel hot tears forming in my eyes. I give the rope one last yank that almost sends my fanny to earth and the mower finally heaves to life!

We are one as I make a couple of passes around the yard. It feels familiar and comfortable and the cut grass is cool as it swirls around my legs. We

are in rhythm. I stop, but only temporarily, because like any new love the tending and caring has just begun. My mower and I are now committed to being together every week.

By June my mower and I will be giving and taking, pushing and pulling with the cooperation and ease that comes from knowing each other well. But by late July the newness will begin to wear off. I will begin wishing I didn't see so much of my mower and resentment will grow. I want freedom and independence, but the mower will insist we stay together — for the lawn, it says.

But like any summer romance, when the leaves begin to fall we will say goodbye. On a crisp autumn day I will wheel my mower back into the corner of the shed, then turn and walk away. It will sit quietly and wait, because it knows that out of need or desire, I will be back next spring to begin our affair again.

THE WAY WEST

By Jim Gray

Roundup Time on the Open Range

Reginald Aldridge came from England to America in the late 1870s to experience the West for himself. His book *Ranch Notes in Kansas, Colorado, the Indian Territory and Northern Texas* provides a very honest and accurate observation of ranching and cowboy life. One of his favorite activities was the annual range roundup.

Timing for the roundup was planned according to the green-up of spring grass. Small outfits, such

as the one Aldridge was with, would "club" together to provide a chuck wagon filled with provisions. Big outfits provided their own wagon plus five or six riders. About two days before the beginning of the roundup the wagon was loaded with provisions. Usually each rider was allowed five horses. A wrangler was designated to look after the extra horses. When the outfit was ready to move out the horses were driven ahead

of the wagon. A mid-day camp allowed time to prepare dinner and change horses. That was accomplished by stretching a couple of ropes from the wheels of the wagon to form an open triangle shaped corral jutting into the prairie. While two men held the ends of the ropes the horses were driven into the makeshift enclosure. With lariat in hand each man threw his loop over the head of the horse he wanted for the afternoon. Once the selected horses were pulled out of the herd the rest of the horses were turned loose to graze until the outfit was ready to move on. As evening approached the horses were gathered once again in the rope corral. Each horse was hobbled by tying a short rope between its forelegs. Two horses were kept tied to a picket and the others turned loose to graze in their hobbles. The picketed horses were used to gather the scattered horses

the next morning when mounts were chosen and hobbles taken from the rest.

Aldridge was working the open range near Medicine Lodge in south central Kansas. After a certain section of the range was selected for roundup, a location on the Medicine River was "fixed" as the central point from which to commence work. The roundup camp was quite a sight. Wagons from each outfit gathered in a loose

community that looked as though a band of wandering nomads had settled in for a limited sojourn. Hundreds of horses grazed the surrounding prairie in smaller herds of fifty or sixty head. Aldridge explained, "The men are for the most part lounging round their campfires, discussing cattle, bragging of the speed of their horses, or describing the various brands of which they are in search." The rangeland fellowship generally continued well into the night.

The next morning all the camps were filled with activity. The range boss designated the area to be worked. As an example, two creeks might be on the agenda for the day. A "party" of cowboys would be sent to the head of each creek to collect and drive cattle toward the mouth of the creek on the Medicine River. Other cowboys were directed to collect cattle from the surrounding range and drive them to-

ward the creek. Most outfits would split their men between the separate roundups on each creek. The men knew the brands for their collective outfits and were prepared to "cut" any cattle belonging to their "wagon" at the appropriate time. Once the creek was thoroughly scouted the cattle were driven to a level piece of prairie and "rounded up" by posting riders around the entire circumference of a herd that might include seven to eight hundred head of cattle. The roundup on the other creek was achieving similar results at the same time.

Then the "cutting" would begin. One man from each outfit was allowed to ride into the cattle and sort animals into a common herd known as the "day herd." To prevent the sorted cattle from mixing with the other "cuts" each outfit drove their day herd to a safe location away from the main herd. At the end of the day the cuts

from both roundups were thrown together into one large day herd. Over the next few days the roundup moved on to other creeks. Cowboys herded the day herds around the clock until the entire range had been scoured. Each herd was driven toward its home range and the roundup was over. According to Aldridge the roundup and the cutting of cattle was "one of the pleasantest operations connected with the ranch business." Aldridge noted that fences were rapidly being erected and that "before many years" the roundup would become a thing of the past on the Kansas grasslands he had discovered on The Way West.

FSA announces application period for Biomass Crop Assistance Program Project Areas

USDA Farm Service Agency (FSA) administrator Bruce Nelson has announced the application period for the next round of Biomass Crop Assistance Program (BCAP) Project Areas. Proposals will be accepted until April 23, 2012. "BCAP provides incentives to farmers and forest landowners to grow non-food crops to be processed into biofuels – a critical element of our national energy strategy to address high fuel prices and reduce reliance on foreign oil," said Nelson. "Because most energy crops are perennial and take time to mature before harvest, BCAP is designed so that

sufficient quantities of feedstock will be available to meet future demand. And because these crops can grow where other crops cannot, it provides farmers with new opportunities to diversify into more markets."

The BCAP Project Areas where these crops are grown will be selected from proposals producers or biomass facilities submit to FSA. Information about submitting a proposal can be found on the www.grants.gov website. BCAP was created in the 2008 Farm Bill. USDA selected nine project areas in FY 2011, which resulted in the approval of more than 860 producer contracts to

grow camelina, hybrid poplar, warm season grasses and giant miscanthus on almost 50,000 acres. The total investment in those projects is estimated to be \$55 million. On Nov. 18, 2011, Congress enacted the Consolidated and Further Continuing Appropriations Act, 2012, limiting the total amount of funding available for BCAP to \$17 million. The Request for Proposal and additional information can be found at www.fsa.usda.gov/bcap.

To acquire information about grants available through the federal government:

Go to www.grants.gov

Click on "Apply for Grants" heading on the left side of page. Click on "Download a Grant Application Package." Type "10.087" in the box with the heading "CFDA Number" and click on "Download Package."

To create jobs in rural communities, drive economic growth, and help reduce our dependence on foreign oil, USDA is aggressively pursuing investments in renewable energy, investing in or making payments to over 5,700 renewable energy and energy efficiency improvement projects. To learn about other programs offered through FSA, visit www.fsa.usda.gov.

Auction raises money for Hereford youth

Another \$8,752 was raised for Hereford youth during the BuyHereford.com auction March 8. The 20 embryos donated for the 2012 Mile High Night National Hereford Sale in Denver as the surprise lot to benefit the Hereford Youth Foundation of America (HYFA) were resold in six lots after originally purchased by David McMahon, Belle Point Ranch, Ft. Smith, Ark., for \$20,000. The McMahon family graciously donated these 20 embryos back to HYFA.

There were 122 total bids on the lots. The high seller was Lot 6, three embryos donated by Topp Herefords, Grace City, N.D. This exciting mating between TH 71U 719T Mr Hereford 11X and GO MS 3196 Advance T90 brought \$2,220 from Raap Hereford Ranch, Gene Raap, Pierpont, S.D. Joseph Skavdahl, Columbus, Mont., paid \$1,650 for Lot 1, three embryos from Fawcett's Elm Creek Ranch, Ree Heights, S.D. They were from a mating of HH Advance 8050U ET and OXH Christi 0028.

The top bid on Lot 4 was \$1,560 for six embryos from a mating of CRR About Time 743 and Ankony Miss Excel 011U ET donated by Sunset Ridge Herefords, Billy Martin, Cumming, Ga. Iron Lake Ranch, Dimitri Matargas, Dallas, Texas, purchased this lot.

Two embryos from TH SHR 605 57G Bismarck 243R ET and KJ 520E Pure Vickie 750P ET sold as Lot 2 from Jensen Bros., Kevin and Sheila Jensen, Courtland, for \$1,300 to Elm Tree Farm LLC, Jody Huckabay, Paris, Ky.

Solsma Show Steers, Jay Solsma, Sanborn, Iowa, stepped up and purchased Lots 3 and 5. Lot 5 brought \$1,240 for four embryos donated by Mill Creek Ranch, Dave Breiner, Alma/Pied Piper Farms, Bob Moore, Hamlin, Texas, from a mating of TH 75J 243R Bailout 144U ET and MCR Harlands Dominet 682ET. Lot 3 was two embryos also from Jensen Bros. from a mating of TH SHR 605 57G Bismarck 243R ET and KJ HVH 33N Radisson 471T ET. Solsma paid \$782 for this lot.

Marshall County to host 52nd annual Quality Beef Day

The 52nd Annual Quality Beef Day will be held on Saturday, April 14, 2012 at Hedstrom Hall in Marysville. The event will start by holding a livestock judging contest. The livestock judging contest will begin at 9:15 a.m. Registration for the livestock judging contest will begin at 8:30 a.m. Anyone can participate in the livestock judging contest.

Following the livestock judging contest, the livestock show will begin. The show order will be bulls, market beef, showmanship, and breeding beef. The following breeds will make up the classes for Quality Beef Day: Angus, Hereford, Charolais, Shorthorn, Simmental, Crossbred/AOB (Market

Beef only), Commercial (females only), and Registered All Other Breeds. There will be three classes of beef showmanship: juniors, intermediates, and seniors.

Six \$50 Valley Veterinary Supply Gift Certificates and/or awards will be presented to the Champion Overall Market Beef, Champion Junior Showman, Champion Intermediate Showman, Champion Senior Showman, Supreme Heifer, and Top Youth Livestock Judge.

Unlike many spring livestock shows that charge entry fees, Quality Beef Day has awards that are donated by many Marshall County and area businesses, which will be

awarded to the champions of the various classes. Also, ribbons will be given to participants.

Check-in will be from 7:00 to 9:00 a.m. and the show will start at 10:00 a.m. The livestock judging contest will start at 9:15 a.m.

If you are interested in showing cattle, or would like to see good cattle; then you should make plans to attend the 52nd Annual Quality Beef Day.

Contact the Marshall County Extension Office at (785) 562-3531, or you may e-mail questions or entries to mvogt@ksu.edu or download information from the Marshall County Extension website at www.marshall.ksu.edu.

Keep Your Hat On

Have you ever wondered how some riders never lose their hats when the action gets really fast? Here are tips from a wide array of riders, trainers and rough stock competitors that will help you keep your hands on the reins and not on your hat when the speed of your horse threatens to blow it off.

Making a run-down for a sliding stop or chasing a cow down the fence can deteriorate into a bungled run if your hat goes airborne at high speed. You feel it starting to lift as your horse gains speed. When you reach up to attempt a quick fix, your rhythm is lost and telegraphs to your horse, throwing you both out of sync resulting in a less than perfect maneuver. If you ignore the warning when you feel the first subtle clues of your hat's imminent departure, the results could be even worse. As it helicopters off your head, the surprise and distraction can cause your horse to spook, break the pattern or run off in a completely different di-

rection. The worst case scenario could develop if you're on a colt and he uses the threat of a flying hat as an excuse to break in half and send you airborne with your hat in front of an appreciative audience. If you're lucky and stay in the saddle and the hat crash lands safely in the dirt, you'll probably be able to wear it again after a bit of cleaning. If luck isn't on your side, the hat could get trampled by other horsemen, a herd of cows or even by your own horse if you have to pass the same way again. If you're in competition and can't stop to retrieve it, you can bet your horse will have his attention on the hat lying in the dirt and not on your driving instructions as you continue your pattern.

Like the cost of a gallon of gas, hats are getting expensive so it might pay in more ways than one to keep it on your head when you climb in the saddle. Barrel racers are dead serious about keeping their hats on while in the arena. Barrel racing associations around the world impose

fines from \$5 in South Australia to \$10 in North America for any contestant who loses their hat while in the arena. There's a big line-up of racers waiting for their go and if they have to wait while hats are retrieved, the delay could double the time needed for hundreds of riders to make their runs.

The fines must work. Over four hundred riders raced around the barrels at an Ocala, Florida barrel race and only one fine was imposed on a rider who had the misfortune of losing her hat.

Working behind the scenes in the rodeo pens can reveal how rough stock competitors manage their hats during the most grueling rides in the business. While working the stripping chute one weekend at an NRA rodeo in Montana, I had the opportunity to talk with a few saddle bronc riders when they made their way back to the chutes to retrieve their gear. Some came in with their hats in their hands and others wear them pulled down far enough to bend their ears over. Most of the bare-headed riders showed a deep crease on their foreheads where a too-tight hat had been crimped around their heads.

I asked one rider if wearing such a small hat wasn't uncomfortable. His answer was to the point. "When I went to rodeo

school, I was taught that if my hat hit the ground, my head better be in it. If I was worried about uncomfortable, I wouldn't be riding bronses. I want my hat to stay on at any cost."

At speed, your brim turns into an airfoil like the wing of an airplane and wants to fly. You can't stop the brim from threatening to fly your hat but you can take measures for your hat to resist the pressure and remain firmly on your head. Stampede strings to duct tape are a few of the ways riders overcome the effect of speed on the brim of their hats. I talked with riders from many different callings and learned how they secure their hats before stepping in the saddle.

World Champion calf roper Jack Hennig's method is basic but works. He has two hats. One to wear when working or going to town and another to wear when he rodeos or shows cow horses. He wipes the perspiration from the sweat band and pulls it down tight. When

he buys a hat he tries on several of the same size. Jack says all hats, even though they're marked the same size, aren't built the same and if you try a few on, you'll find one that is just a tad smaller than the rest. Buy that one to wear during your high speed runs.

Texas cutting horse trainer Tom Ryan punches holes in his hats. I caught up with Tom one afternoon while he was resting on the porch of his bunkhouse. I asked him how he keeps his hat on when he trains fast-moving cutters. He said, "Let me see your hat and I'll show you." He took my hat and disappeared in the barn. A few seconds later he came strolling back with his leather punch in one hand and my hat in the other. He was calmly destroying the band in my new Stetson with the punch. He uses his leather punch to perforate the sweatband with numerous holes. The holes create suction between the skin of your forehead and the sweat band. Use

the biggest hole on your punch for best results and leave enough room between holes for the band to do its job. Tom punches seven or eight holes on the front of the band to help secure his hat. He doesn't care what kind of hat it is or how much it costs. It doesn't bother him to punch holes in other people's hats either. I took my hat and left when he asked me, "Do you want your horse branded too?" If you're near Millsap, Texas, you may be able to have your hat perforated at no charge if you stop by Tom's ranch.

Jay Holmes of the Triple J Ranch won the World Championship in the Open Hackamore class during the National Reined Cow Horse Association show in Stephenville, Texas in February 2004. Jay's blistering high speed turns on the fence on DUN IT BIG helped secure the world title. His hat never budged during the record run. Back in Sarasota, Florida, Jay never said what method he

AUCTION

SATURDAY, APRIL 14 — 9:30 AM

Location: Sterl Hall, 619 N. Rogers — ABILENE, KANSAS

RED WING CROCKS: (Approx. 11:30 AM) 2 Waconda Springs water jugs 5 and 3 gallons; 3 gal. salt glaze blue slip Drop 8 and Bullseye pattern crocks; 5 gal. uses but did make a few suggestions when asked about hats.

If you buy a hat a size bigger than what you normally wear, you'll have room to add a strip of foam inside the band. "Western stores sell foam strips for that purpose. The foam will force the sweat band to conform to your head, making a tighter fit. Some manufacturers accept special orders for hats with lambskin sweat bands. If you get the right fitting hat with a lambskin sweat band, you won't have to worry about your hat," Holmes said. One rider's approach is simple but effective. "Tape it on!" he says with enthusiasm. "I take a piece of duct tape about 3 inches long and carefully secure half of it on the front of the band and fold the other half up toward the top of the band. Put on properly, the ends are at the top and the fold of the tape is at the bottom of the band. Using both hands, I carefully place

the hat on my head and pull it down tight. The tape sticks to my forehead and the sweat band and my hat doesn't move."

Another way is to spray the inside of the hat and the sweatband with hair spray. It works like glue and if it can keep some of those wild hairdos in place during a hurricane, it sure ought to keep your hat on.

If you have a flying hat problem, maybe these suggestions of duct tape, hair spray, foam inserts or a stampede string might help keep your hat on your head and save you the trouble of dismounting every time it flies off. If none of these work, just buy a good-fitting hat with a high crown that you can pull down tight until your ears fold over. You won't be able to hear anybody but your hat will stay on.

National Research Committee discusses safety of National Bio- and Agro-Defense Facility

Recently a committee of the National Research Council (NRC) and the Department of Homeland Security (DHS) held a meeting in Washington D.C. to discuss the updated risk assessment for the proposed National Bio- and Agro-Defense Facility (NBAF) that is scheduled to be built in Manhattan.

The meeting focused on a report made public last month about NBAF regarding the accidental release of animal diseases from the lab. Last month's report by the DHS stated that over the 50-year lifespan of the facility, the likelihood of an accidental release of a foot-and-mouth outbreak is less

than .11 percent. That percentage takes into consideration possible catastrophic events such as tornados and earthquakes. Not taking into account catastrophic events, the risk assessment is less than .008 percent.

During the meeting, experts reviewed the updated risk assessment and addressed concerns previously raised in an NRC review of the initial site-specific risk assessment for the NBAF. DHS provided the committee with a presentation on the contractor's approach for developing the work plan for the updated assessment. Following the completion of the final as-

essment, the committee will review the document and prepare a report for DHS and Congress containing its findings on its adequacy and validity. The report is expected to be provided within four months of receiving the final updated assessment from DHS.

NBAF is expected to cost \$650 million and will replace the animal research

facility at Plum Island, New York. Last month, the Obama administration cut next year's federal funding for NBAF. However, evaluations, assessments, and hearings will continue as mandated by Congress. At this point in time, the facility is still expected to receive accreditation in 2017 with operations fully transferred from Plum Island by 2018.

Farm Credit joins Kansas Foundation for Agriculture in the Classroom Ag Advocate Team

The Farm Credit Associations of Kansas are pleased to provide financial support toward increasing agriculture literacy in Kansas. They have joined the Ag Advocate team and invested \$5,000 in educational programs provided by the Kansas Foundation for Agriculture in the Classroom (KFAC). Their contribution to the Ag Advocate Challenge pooled together with other donations will allow KFAC to reach over 25,000 Kansas students and their teachers this year. Donor dollars help pay for printing of lesson plans, educator guides and Kansas Kids Connection Magazines. Additional dollars are leveraged as teachers attended summer graduate courses and in-service trainings. Funding is also used to perform research and development activities to create new delivery methods for agriculture literacy lesson plans.

“Farm Credit is pleased to help advance the understanding of agriculture in schools and among teach-

On hand for the presentation of the Farm Credit Association's donation to Kansas Foundation for Ag in the Classroom were, from left: Mick Gechter, Farm Credit of Southwest Kansas; Tammy Birkbeck, Frontier Farm Credit; Cathy Musick, Kansas Foundation for Ag in the Classroom; and Stuart Hays, Frontier Farm Credit.

ers,” said Mick Gechter, vice president, Correspondent Lending, Farm Credit of Southwest Kansas. “Basic understanding of agriculture and science is critical for young people to develop so that they can make informed decisions throughout their

lives. With one in five people employed in agriculture, agriculture education also opens the door for kids to dream about possible careers in the industry.”

The KFAC mission is to connect classrooms to Kansas Agriculture. “We teach about the importance of food production and delivery systems and use agriculture as a tool to reach core curriculum goals in math, reading, science, history, and social studies,” said Cathy Musick, executive director for KFAC. “Currently, we reach about five percent of Kansas elementary students. Our goal is to double that in the next three years. Ag Advocate funding is critical in allowing us to increase our reach while maintaining excellent programming and developing new delivery methods that are efficient and effective for Kansas teachers,” noted Musick. “We are grateful to our donors and look forward to continued support as we continue to grow our program.” More information is available at www.ksagclassroom.org.

Barton County Fair goes green with soy-based products

With soy biodiesel powering trams and carnival rides, soy-based paint freshening up show barns and soy-based cleaning products getting the fairgrounds ready, 13 fairs will be a little greener this year with the help of the United Soybean Board (USB) and the soy checkoff.

“U.S. soy feeds the animals that provide the meat we eat, but soy does a lot more than that,” says Geno Lowe, a soybean farmer from Hebron, Md., and USB farmer-director. “U.S. soy is increasingly popular as a ‘green’ ingredient in everything from biofuel to paint to cleaning products and more.”

Lowe and his fellow USB farmer-directors selected the 13 fairs as part of a competitive application process. Through the

Green Ribbon Fairs reimbursement program, now in its second year, the check-off works with fairs across the country to promote the use of soy-based products such as biodiesel, paint, cleaners, hand sanitizers and more. The following fairs will use soy-based products and help educate fair-goers by participating in the 2012 Green Ribbon Fair Reimbursement Program:

Barton County Fair (Kan.); Delaware County Fair (Iowa); Dutchess County Fair (N.Y.); Dyer County Fair (Tenn.); Houghton County Fair (Mich.); Indiana State Fair; Minnesota Fairs; North Carolina State Fair; Ohio State Fair; Saunders County Fair (Neb.); South Dakota State Fair; State Fair of West Virginia; St. Mary's County Fair (Md.)

Ag groups host Seward County Farm Education Day

On March 20, 2012, early elementary students from Seward County schools toured animal and natural resources exhibits at the Seward County Community College Agriculture Building for Seward County Farm Education Day. Members of local agricultural organizations including: the Seward County Farm Bureau, the Southwestern Heights FFA, the Seward County Community College Collegiate Farm Bureau, the Natural Re-

source Conservation Service, the Seward County Conservation District, and the Seward County Extension Office hosted events to teach more than 1300 pre-schoolers, kindergartners and first grade students about agricultural industries in the state of Kansas. "The goal of the activity is to develop agriculturally literate consumers by making the connection between food production, food consumption, and agriculture,"

said Carmelita Goossen, Southwestern Heights FFA Advisor.

All teachers of pre-school, kindergarten, and first grade within Seward County are invited to bring their students to experience Seward County Farm Education Day to help Seward County kids identify agriculture within their community. The event takes place from 8:30 a.m. to 2:30 p.m. More than 1300 kids participate in this event annually.

Each class is given a guided tour led by a Southwestern Heights FFA member or Seward County Community College agriculture student. Kids learned about foods and agricultural commodities that are produced in the state of Kansas and kids were educated on how to make healthy food choices. They also experienced farm animals, equipment, foods, & natural resources.

Fifteen Southwestern Heights FFA members and three sponsors helped with Seward County Farm Education Day by leading animal and natural resource exhibits or serving as group leaders. Cassandra Sponsel, Southwestern Heights FFA reporter, shared her poultry project with children at Farm Education Day by hosting a poultry exhibit that contained chickens, ducks and geese. "It was fun helping children experi-

ence hands-on exhibits to expose them to animals and other parts of agriculture that they may not get to experience if they live in town," said Cassandra. FFA members Breanna Butler and Jacie Butler also displayed a horse exhibit with Breanna's Red Roan Quarter Horse from her Equine Science Supervised Agricultural Experience (SAE) Project.

In addition to serving as group leaders, Southwestern Heights FFA members were also responsible for teaching a station to educate kids about water and

its importance to agriculture.

Southwestern Heights FFA members Amy Spurgeon, Johnny Rodriguez and Seth Beaver conducted the Clean Water Academy to teach children how to protect local water sources such as Arkalon from pollution. Prior to the activity the Southwestern Heights Agricultural Education students made over 1300 snack bags of Goldfish crackers to give to students as a reminder that they can help prevent water pollution to protect wildlife in Arkalon Park.

Fifteen Southwestern Heights FFA members educated 1300 kids about agriculture during the Seward County Farm Bureau Farm Education Day at SCCC on March 20th. They were, from left: Amy Spurgeon, Dianna Royall, Makaila Furman, Tucker Thorp, Seth Beaver, Devin Walker, Janet Paris –Sponsor, David Stout, Jared Eakes, Steven Paris, Caleb Tatro, Breanna Butler, Jacie Butler, Johnny Rodriguez, Carmelita Goossen – FFA Advisor, Lane Paris, Cassandra Sponsel, and Ashley Pearce.

Earthworm populations reduced by soil cultivation

Earthworm populations generally become reduced in cultivated agricultural fields, said Peter Tomlinson, K-State Research and Extension environmental quality specialist.

Several explanations for the decline and loss of earthworms have been proposed, he said.

"It could be that tillage implements cause physical injury to earthworms, resulting in mortality. Also, reductions in residue and soil organic matter associated with long-term tillage restrict the earthworms' food supplies," Tomlinson said.

"A change in soil temperature resulting from the loss of insulation provided by the vegetation could also be reducing earthworm populations. Another possibility is increased predation from birds when the soil is turned over," he added.

It is likely a combination of these factors leads to reduced earthworm populations, the K-State agronomist said.

In studies comparing adjacent cultivated and uncultivated soils, population reductions are wide-ranging, he said. In one five-year study, the population was reduced by 70 percent by tillage but in a different series of 25-year studies the population was only reduced between 11 and 16 percent, he said.

When tillage practices are reduced or eliminated as a result of conversion to a minimal or no-till system, earthworm populations generally begin to increase, Tomlinson said.

"Earthworms play an important role in no-till systems as they redistribute organic matter. They are important in soil fertility, and their burrows play an important role in soil aeration and drainage," he concluded.

BAXTER BLACK

ON THE EDGE OF COMMON SENSE

“Et Tu, Uteri!”

Many country veterinary practitioners have invested money in their clinics for facilities to handle cattle and horses. It is for the convenience of the vet but also for the restraint and treatment of the patient. However, there were those clients that assumed it was so the vet could charge them for an office call. Dr. Blaine took an after-hours call from a third generation cattlemethod in the rolling foothills of western Alber-

ta. “We’ve got a prolapse and need you to come to the ranch straight away,” she said.

“I’ve got this clinic here, eh?” he offered.

“Nay, it’s too far, she’s too big and she’s down!”

An hour later Doc pulled into the pasture where the cow lay. Due to the mud, slush and frozen snow he was only able to get within 30 meters of the 1500-pound Simmental cross. He positioned his vehicle so that he would have some light on the area.

The cow lay on a sloping hillock with her head to the upside. The prolapse, which he named Polly, as in, “Let’s get Polly back in there!” was proportional to the size of her cow. That is to say, it was comparable to a four-foot-long, 50-pound breakfast burrito!

In spite of their efforts to manhandle the cow to face downhill so gravity was on their side, they were unable. The rancher brought a

Polaris ATV from the barn. Using a rope, they successfully moved the cow into the desired position. Doc knew better than to tie the rope to his vet truck. It was already missing one side mirror and the passenger door didn’t close properly from the previous cow encounter. They tied it to the Polaris and snugged it. At that moment the cow rose up and stood. She appeared to be in a trance. Quickly taking advantage, Doc smoothly injected an epidural. With the rancher’s help they inverted Polly in a matter of minutes. As soon as it plopped in, the cow had a miraculous recovery! She suddenly became aware of her situation, causing her to attempt an escape dragging the Polaris behind her. They looked like two elephantine ice skaters in a post-partum ballet!

The cow finally tangled in the line and they managed to slow her down. At that point she turned her newfound fury on her tormentors, attacking the good doctor and turning the four-wheeler into a 3-wheeler!

Doc was leaning up against his pickup trying to catch his breath while the unladylike rancher turned the air blue with curses, lamentations, and threats of bovine felonies! “Why does this always happen to me?!” she moaned, “Why me?”

“I’ve got this clinic now, eh?” said Dr. Blaine.

“Et tu, uteri!” Shakespeare (1598)

Borck named to Bioscience Authority

Kansas Gov. Sam Brownback has announced the appointment of Lee Borck as a member of the Kansas Bioscience Authority (KBA).

“Lee is a well-qualified and highly respected advo-

cate for Kansas agriculture interests,” Brownback said. “I appreciate his willingness to serve the state of Kansas in this important role.”

Borck earned his Bachelor of Science degree in

Agriculture Economics at Kansas State University in 1970. He is chairman of Innovative Livestock Services and of the Beef Marketing Group Cooperative. In 2011, Borck was named to Ingram’s “50 Kansans You

Should Know” and was elected into the Cattle Feeders Hall of Fame.

Borck’s appointment must be confirmed by the Kansas Senate. He succeeds KBA board member John Carlin.

Tight turns, no chatter

GMD Trailed Disc Mowers
with new, wider working widths
10' 2" – 13'

Invest in Quality!

The Gyrodine swivel-hitch allows turns in excess of 90° for outstanding maneuverability in the field. It eliminates PTO chatter and minimizes U-joint wear and problems.

TIFFANY CATTLE CO., INC

A Complete Cattle Feeding and Marketing Service

Tiffany Cattle Co.
Family Owned
And Operated

With a 15,000 head capacity, Tiffany Cattle Company is large enough to have economics of scale but small enough to provide personal attention. Pen sizes range from 50 to 200 head. A computerized summary of feed, cattle processing, veterinary services and other costs are easily accessible on each pen of cattle.

PRODUCTION SERVICES

Objective is simply: Least Cost Per Pound of Gain!
Ration formulation and cost analysis, health program designed and maintained by veterinarian, special pens and attention to sick animals, feed financing, and cattle purchasing available.

MARKETING SERVICES

Marketing finished cattle is top priority at Tiffany Cattle Company. You have the option of selling on the cash market, forward contracting or grid pricing through US Premium Beef.

- Risk management handled by Tiffany Cattle Company
- Locked commodity prices • Complete profit/loss statement for each pen
- All marketing decisions discussed with and approved by cattle owner
- Reward for your efforts in producing a quality product by selling your cattle on an industry competitive grid
