Meat workshop offers insight on new cuts, cooking styles

By Lucas Shivers

Flat Iron, Denver, Delmonico, San Antonio and Ranch steak samples were served to more than 20 participants at a workshop called Cooking with New and Different Cuts of Meat at Kansas State University.

The March 10 workshop in Weber Hall focused on unique cuts of meat available at the retail counter, said Travis O'Quinn, assistant professor and meat specialist with the Department of Animal Sciences and Industry at K-State.

"Our goals were to help teach consumers about all of their options when it comes to purchasing, selecting and cooking meat products," said O'Quinn. "Many consumers are overwhelmed by the number of options they have with meats and the high costs for most meats makes this process further intimidating."

Consumers tasted beef strip loin steaks of different USDA quality grades from prime, choice and select. They also tried inside round

Graduate student Lauren Prill presents at the Cooking with New and Different Cuts of Meat Workshop at Kansas State University on March 10 in Weber Hall.

steaks cooked with four different methods to demonstrate how cooking impacts tenderness.

"Trying the samples allows the consumers to see and most importantly taste the differences we talk about in the lecture format," said O'Quinn. "Nothing replaces the hands-on experience of seeing the concepts in prac-

K-State Research and

Photo by Lucas Shivers

Extension organized the opportunity to attend the session specifically for a north central Kansas group called Women Involved in Agricul-

"Extension plays a critical role in connecting the latest research findings with producers and consumers," said O'Quinn. "This occurs through a variety of platforms including internet sites, fact sheets, regional and local meetings such as this one."

Along with several graduate students, participants learned about meat cuts, grades, tenderness, and cooking options.

"Both beef producers and beef consumers loved this workshop," said Karaline Meyer, Wabaunsee County agriculture Extension agent. "It's very hands-on, meaning we sampled lots of meat."

O'Quinn said he hopes consumers gain the confidence to go out and try new products and cooking methods to better help them meet their and their friends' and family's needs. He noted many misconceptions about meat by consumers.

"Consumers have misunderstandings about meat labeling, meat cookery, meat cuts, grass versus grain feeding, the harvest process, health and nutrition, and of course livestock production

practices," said O'Ouinn. "The list really is endless."

Many consumers can be reactionary on "hot button" topics. In most cases, consumers would find that both meat and livestock producers go to great lengths to ensure that only the safest and highest quality products ever reach the end consumers.

"Almost all practices that are done in livestock and meat production are done for good reason," he said. "I would encourage consumers to first ask the 'why' on such topics and more than likely they will gain an understanding and be supportive of the topic."

In addition to having their questions answered, participants were asked to go back into their communities and share what they have learned to hopefully help spread this knowledge.

"Whether we are talking about marbling in beef steaks or cooking methods and tenderness, when consumers taste the difference, it always leaves a lasting impression," he said.

Ag foundation's Teacher of the Year wins national teaching award

The Kansas Foundation for Agriculture in the Classroom (KFAC) Janet Sims Memorial Teacher of the Year, Denise Scribner, was recently named one of eight recipients of the 2017 National Agriculture in the Classroom Organization (NAITCO) Excellence in Teaching About Agriculture award. Scribner is a biology, ecology and forensic crime science teacher at Eisenhower High School in Goddard.

The award program honors outstanding teachers who bring innovation and practical teaching about agriculture into the classroom. It is sponsored by the Agriculture in the Classroom Program

Denise Scribner was named a recipient of the 2017 National Agriculture in the Classroom Organization "Excellence in Teaching About Agriculture" award. The award is sponsored by USDA's National Institute of Food and Agriculture and Farm Credit.

of the USDA National Institute of Food and Agriculture, NAITCO and Farm Credit.

Scribner will be recognized during the NAITCO conference in Kansas City, Mo. June 20-23, 2017. As a recipient, Scribner will receive a \$500 honorarium and up to \$1,500 for travel-related expenses to attend the national conference.

exemplifies "Denise going 'all-in' with agriculture in her classroom," said Cathy Musick, KFAC executive director. "She is empowering her students to think beyond the farm and have a greater understanding of our food system through her use of agriculture and environmental science resources and tools."

This is the second year in a row that a Kansas teacher has received this award.

"It's a validation of something we already knew and that is Kansas has impactful, passionate and deeply committed teachers," said Musick. "That is something all Kansans can be proud of."

Roan calf holds special memories

By Donna Sullivan, Editor

Eleven-year-old Kaley Chambers loves her cattle, and she loved her grandpa. The two of them shared an interest in roan-colored cattle, and one December night, as they sat discussing the uniquely colored animals, she made him a promise. "I said, 'I'm going to get some someday, Grandpa," Kaley recalled.

Soon after, her grandpa, Dennis McKale, passed away.

She made good on her promise when she purchased two bred roan heifers from Lyle Longenecker, after having spent months driving past his pasture and admiring them. One is a fall calving heifer and the other was due to calve this spring.

On March 3, after Kaley spent many nights checking on her, the heifer gave birth to a little bull calf.

"He had a lot of gunk in his lungs when he was born and Kaley was really on edge,'

said her mom Amy. But the calf survived and Kaley named him Thunder. Thunder joins the Chambers' herd of Simmental and Angus cattle. The Wakefield fifth-grader is happy to have kept her promise to her grandpa. "I liked

them because they were unique and my grandpa thought they were unique. So after he

passed away, I really wanted to get one because they reminded me of him," she said. Courtesy photos

Agriculture is amazing

By John Schlageck,

Kansas Farm Bureau In case you hadn't noticed, agriculture provides almost everything we eat, use and wear daily. This industry is increasingly contributing to fuel and other bioproducts.

Still, too few people understand and appreciate this contribution. This is particularly true in our schools today where students may be exposed to agriculture only if they enroll in related vocational training - if it even exists.

March 20 marks the first day of spring. It falls during National Ag Week, March 19-25. This is a time to recognize and celebrate the abundance provided by this nation's farmers and ranchers.

National Ag Week encourages each American to understand how food and fiber products are produced; value the essential role of agriculture in maintaining a strong economy and appreciate the role agriculture plays in providing safe, abundant and affordable products.

During this period we as agricultural associations help those in our communities understand how food, fiber and renewable resource products are produced. We must highlight the essential role agriculture plays in maintaining a strong Kansas economy as well as our U.S. economy.

It's up to us to foster an appreciation of the role agriculture plays in providing safe, abundant and affordable food, fuel and fiber among today's citizenry. Also, we must inform this same population about the career opportunities in the agricultural industry

Agriculture is too important a topic to be taught only to a small percentage of students considering careers in agriculture and pursuing vocational agricultural

County Farm Bureaus across the state will be celebrating National Ag Week. Activities include radio programs on farming and ranching, breakfasts,

book distributions, library displays about agriculture, newspaper ads, farm tours, ag implement dealer tours and farm and ranch safety programs.

These activities are intended to increase the knowledge of agriculture and nutrition among today's consumers to help them make informed personal choices about diet and health. Informed citizens will also be better able to participate in establishing the policies that will support a competitive agricultural industry in the country and around the world.

A few generations ago, most Americans were directly involved in - or had relatives or friends involved in agricultural-related endeavors. Today, that's no longer the case.

That's why it is so important we join together on this special week devoted to telling the story of this unparalleled success story. Remember, celebrate agriculture this March 19-25.

Agriculture is truly amazing.

John Schlageck is a leading commentator on agriculture and rural Kansas. Born and raised on a diversified farm in northwestern Kansas, his writing reflects a lifetime of experience, knowledge and

Every time I send a text message to someone and it takes them hours to respond – which seems to happen frequently, especially with my family members - when the response finally comes, I always say, "Well, if I'm ever stuck in the bottom of a well, I'm not going to text YOU for help."

Why I'm fixated with the unlikely possibility of falling into wells can be a subject for some other deep psychological discus-

On the other hand, I'm going to be entering the names and numbers of every 4-H'er I know into my cell phone, because if I ever DO fall into a well, that's who I'm going to call. I'm confident I would be rescued promptly.

A couple of weeks ago, *Grass & Grain's* publisher Tom Carlin and I were dis-

cussing how, as one of the state's ag newspapers, we could help with wildfire relief. We tossed around a couple of ideas and were heading in a certain direction when Tom said, "Do you think there's anyone we could partner with?"

Our original plan was to send milk replacer to the 4-H'ers in Meade County who are fostering orphaned calves. So the logical partners for the project were, in our minds, 4-H'ers.

I made a few phone calls and within a day had a very good response. Joe Ebert at Key Feeds in Clay Center mentioned that milk replacer might not be as needed as calf starter feed. A phone call to Rachelle Schlochtermeier in Meade County, the 4-H mom who is coordinating the foster calf effort, confirmed that. Joe said he would sell us the feed at cost and would deliver it for free if we sold twelve pallets.

Twelve pallets? The response had been good, but was it "twelve pallets"

And if it wasn't, how was I going to get however many pallets we did sell down there?

"You've created a monster," one of my co-workers told me.

Yes, I may have created a monster, but in the back of my mind, I knew better than to ever underestimate 4-H families.

River Valley Extension District director John Forshee ended one of his emails to me with, "We WILL get twelve pallets."

Working with River Valley District, Riley County and Marshall County 4-H, our original donation more than quadrupled and we got to the necessary twelve pallets. There was even some money left over from the River Valley District, which will be used to buy medications or other supplies for the

John had many people tell him they had been wanting to help, but just didn't know the best way. 4-H'ers helping other 4-H'ers, who were helping the victims of the fire, was a really good way.

My kids were 4-H'ers and soon my grandkids will join the ranks. This is just one example of why 4-H is a program that will always have my support and deep, deep respect.

And why, from now on, I will always have 4-H'ers on speed dial on

Spring has sprung and so have my cows. The grass has started to green up and the temptation was just too much for my old cows and they finally broke through the electric fence separating them from the brome. I suspect they got some of their calves to do the dirty work and that says a lot about the character of my cows. They fear the electric fence and the ensuing shock but they have no problem sending Junior into the fence. The calf then gets caught up in the fence, breaking the wire and allowing mama to waltz right through the opening and onto the brome.

I must admit that I find this morally reprehensible. Don't get me wrong, my cows are perfectly fine mothers with this one exception. I guess they are going with the idea that the calves won't be around next year and therefore they will not get culled for being fence jumpers. Maybe they know that if I culled every cow that got out I would put myself out of the cattle business.

In the grand scheme of things, it is not the end of the world either. When they get out on the brome they are not off my place, they are just not where I want them. Every night I go out with a bale of hay and unroll it in the pasture I want them in. Every night they file back through the hole in the fence that they have had one of their unsuspecting calves create. Once inside the confines of the pasture, I mend the fence while they munch their hay. The next day, someone nudges their calf through the fence and we are at it all over again.

Yes, I have tested the fence and it has plenty of spark. I am also aware that if I built a permanent fence I would not have this problem. I have, however, decided that my cows are evil and they would find some other way to get under my skin. I have also entertained the idea that maybe the calves know what they are doing and the evil in them is genetic. Sometimes I even wonder if instead of sending their calves through the fence that maybe the cows have gotten a hold of one of the many pairs of fencing pliers that have disappeared from my truck over the years and are cutting their own way through the fence. I know cloven

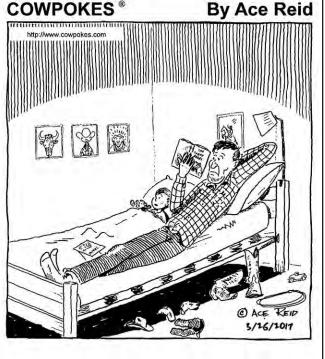

hooves and working pliers kind of shoots holes in that theory, but I would not put it past them.

They have made me mad enough that I have finally started work on building that permanent fence. It is a long, arduous process. All of you who have tried to dig postholes in the Flint Hills know what I mean. In any case I have started the process of building a better fence. This has led to the cows coming up and watching me put the fence in. I have decided that they are doing one of two things: first, I am sure they are mocking me. I am not exactly sure what they are saying about me, but I know for sure that they are making fun of me. I am also certain that they are passing this lack of respect on to the juvenile delinquent offspring, thus perpetuating the cycle of disobedience. I know they may look like they are chewing their cud and watching the fence building progress but I also know it is much more.

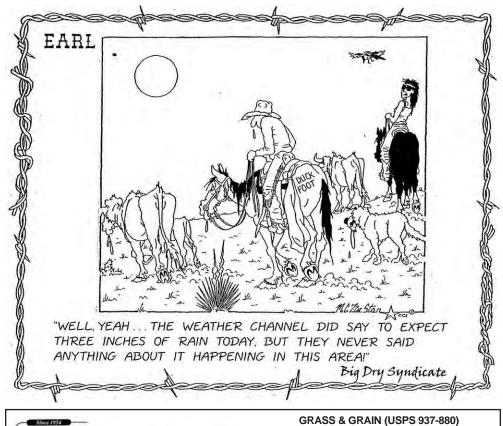

I suspect they are also looking for weak spots in the construction of the fence They are probably already plotting where they can make an escape from the new reinforced fencing. I am sure they are taking notes and holding strategy meetings on how to break back out into the green brome grass.

As mad as they make me I have tried hard to appease them by feeding them only the best hay. I make sure their feeders are full and I even roll some hay out for them to lounge on in the sun. Yet they insist on ignoring my good faith efforts and continue to trample my fence and eat my brome mocking me the whole time.

I have concluded that as much as I love my job and I really enjoy running cows, they do not reciprocate the feelings and are very self-centered. The only real satisfaction I have is the fact that I know that no matter what they may do, in the end I will win. Because no matter how many times they foil my well-made plans and circumvent my authority, they might win the battle. However, I smile with satisfaction each night as I look at my hamburger on my plate, because I have won the war.

"GranPaw, wuz the porridge made with all natural ingredients?"

USDA on tainted Brazilian meat: none has entered U.S., 100 percent re-inspection instituted

The U.S. Department of Agriculture's (USDA) Food Safety and Inspection Service (FSIS) has announced additional steps to keep the food supply safe for American families in light of the recent investigations of Brazil's meat industry.

While none of the slaughter or processing facilities implicated in the Brazilian scandal have shipped meat products to the United States, FSIS immediately instituted additional pathogen testing of all shipments of raw beef and ready-to-eat products from Brazil upon hearing reports of the Brazilian investigation. FSIS has also increased its examination of all these products at ports-of-entry across the country. The agency will indefinitely maintain its 100% re-inspection and pathogen testing of all lots of FSIS-regulated products imported from Brazil.

"Keeping food safe for American families is our top priority," said Mike Young, acting deputy secretary of the U.S. Department of Agriculture. "FSIS has strengthened the existing safeguards that protect the American food supply as a precaution and is monitoring the Brazilian government's investigation closely."

The FSIS import inspection system (including equivalence determinations, in-country audits, and re-inspection processes) is designed to ensure that imported meat, poultry, and processed egg products are safe and wholesome. FSIS works closely with the U.S. Customs and Border Protection (CBP) and the Animal and Plant Health Inspection Service (APHIS) to ensure that these products are safe before they enter the coun-

"FSIS will take any additional actions necessary to protect public health," said Al Almanza, acting deputy under secretary for Food

Safety. "It is our mission to keep the food on American dinner tables safe."

Although none of the establishments implicated in the Brazil scandal have shipped meat products to the United States, effective March 18, FSIS instituted 100% point-of-entry re-inspection of all Brazilian beef imported into the United States, including conducting product examination on 100% of the lots. This re-inspection includes 100%

testing of beef trimmings from Brazil for Salmonella, E. coli O157:H7, and non-O157 shiga-toxin producing E. coli (STEC). The 100%re-inspection also includes 100% testing of ready-to-eat products from Brazil for salmonella and listeria monocytogenes. FSIS will take immediate action to refuse entry of product into the United States if there are findings of food safety con-

KARL program accepting applications through April 15 for 2017-2019 class

and Rural Leadership program will accept applications through April 15 from state residents interested in participating in KARL's 2017-2019 class.

The two-year program includes three study tours, as well as nine winter, 48-hour seminars at sites across the state, said KARL director Al Davis. The program schedules its in-state seminars plus two national seminars and a "capstone" international tour for November through March. The program has consistently taken the production agriculture's "off season" into consideration in its structure.

"KARL alumni and current class members all go out of their way to tell us that the 54-day commitment is well worth the investment. and quite easy to manage since it is dispersed over a two-year period. They also submit that the intensive training is much more needcompetitive environment," Davis added.

"Since moving back to Goodland, I have been asked by numerous people to serve on various boards and community positions, which range from church activities to school board and even county commissioner." said Tim Franklin, farm producer from Goodland and KARL Class XII member. "Every organization wants to hear new ideas from young people returning to their rural communities. I have had to learn to say 'no' so as not to be overwhelmed. As a result, I am seeing the need for strong individuals in our communities which motivated me to apply for the KARL Program in order to improve my skills as I assume leadership roles in my community. By broadening my experiences and increasing my knowledge, I have become a well-rounded person for my business

The Kansas Agriculture ed in today's changing and and community and I have accepted statewide and national leadership roles during the process. KARL is important to me to continue to learn and challenge myself throughout life. KARL training, networks and experiences help me do that by the diversity of experiences represented in my class and by the extensive curriculum the program provides."

> To be considered for the next KARL class, applicants must submit a completed profile form, available online at www.karlprogram. com/

> KARL's board of directors will screen the profiles and select the top 45 applicants to be scheduled for interviews in early May. The program will announce its 30-member Class XIV on June 1. Tuition for the notfor-profit training program is \$2,500 per year or a total of \$5,000. KARL donors contribute the remainder of the expenses to cover a fellow

ship valued at \$21,000. The overall experience, budgeted over \$26,000 per person, allows for the volunteer board of directors to select participants based on leadership ability and anticipated return on investment.

Rose Edwards, Stillwater, Oklahoma Wins Weekly G&G Recipe Contest Winner Rose Edwards, Stillwater, Óklahoma: STRAWBERRY TRIFLE

2-layer white cake mix

4 cups fresh strawberries, sliced

2 tablespoons sugar

1/3 cup strawberry jam

1 package vanilla instant pudding

1 1/2 cups cold milk

1 1/2 cups Cool Whip

Prepare cake batter and bake in (2) 9-inch round cake layers. Cool cakes in pans 10 minutes. Invert on wire racks and gently remove pans. Cool cakes completely. Toss berries with sugar. Refrigerate 30 minutes. Wrap 1 cake and freeze for another use. Cut the one cake horizontally in half. Spread bottom layer with jam. Top with remaining cake layer. Use 2 1/2-inch cookie cutter to cut circle from center of cake. Set aside. Cut remaining cake into 2-inch pieces. Beat pudding mix and milk in bowl with whisk 2 minutes. Stir in Cool Whip. Layer half each of the cake pieces, berries with juices and pudding mixture in a large glass bowl, repeat layers. Top with reserved cake round. Refrigerate 4 hours.

Lydia J. Miller, Westphalia:

RANCH POTATOES

4 medium potatoes, peeled & cut into 4-inch wedges 1 cup Ranch dressing

1 teaspoon salt

1/4 teaspoon pepper

1/3 cup dry bread crumbs

Place potatoes in a 9-by-13-by-2-inch pan. Pour dressing, salt and pepper over top and mix. Sprinkle with bread crumbs. Cover CENTRAL KANSAS

Spring Spraying needs!

and bake at 375 degrees for 30 minutes. Uncover; bake for another 20 minutes until potatoes are tender.

Kellee George, Lawrence: RASPBERRY LEMON **CHEESECAKE BARS**

- 2 cups graham cracker crumbs
- 1 cup plus 2 tablespoons sugar, divided
- 6 tablespoons butter, melt-

3 cups raspberries, divided 1 tablespoon each zest & iuice from 1 lemon (4) 8-ounce packages cream cheese 4 eggs

Heat oven to 325 degrees. Line a 9-by-13-inch pan with foil, with ends of foil extending over sides. Combine graham crumbs, 2 tablespoons sugar and butter. Press onto bottom of prepared pan. Bake 10 minutes. Reserve 1/2 cup raspberries and 1 teaspoon lemon zest for later use. Beat cream cheese, lemon juice, remaining zest and remaining sugar in large bowl with mixer until blended. Add eggs, one at a time, mixing on low speed after each just until blended. Gently stir in remaining raspberries, pour over crust. Bake 35-40 minutes or until center is almost set. Cool completely. Refrigerate 4 hours. Top with reserved raspberries and lemon zest. Use foil handles to remove cheese-

cinnamon and sugar. Cut each tortilla into 8 wedges. Place on a single layer in an ungreased 15-by-10-by-1-inch baking sheet. Bake at 400 degrees for 8 to 10 minutes or until lightly browned. Remove to wire rack to cool.

Barbara Barthol, Olathe: POTATO CHIP **COOKIES**

3/4 cup oleo or butter 3/4 cup sugar 1 egg yolk

3/4 cup crushed potato chips

1 1/2 cups flour

1 teaspoon vanilla

1 cup nuts

Cream butter and sugar; add other ingredients. Shape into balls and press down with a fork. Bake at 350 degrees for 15 minutes. Makes 4 dozen.

Millie Conger, Tecum-

CHICKEN GARLIC

BREAD BAKE 2 pounds boneless skinless chicken breast, cooked & shredded

24-ounce jar fire-roasted tomato & garlic pasta sauce 16-ounce package shredded mozzarella cheese with a touch of Philadelphia, divided

11.25-ounce package frozen garlic Texas toast

Heat oven to 400 degrees. Combine chicken and pasta sauce in bowl then stir in 1 1/2 cups cheese. Spread onto bottom of 9-by-13-inch baking dish which has been sprayed with cooking spray. Bake 15 minutes. Arrange toast slices over casserole then sprinkle with remaining cheese. Bake 15 minutes or until casserole is heated through and toast is crisp and golden brown.

How To Have A Great Game Watching Party

(NAPS) — When the gang gathers at your house to watch the game, heeding three hints on how to throw a terrific party can help you really score compliments.

1. Figure not everyone has an equal interest in the actual game itself. Consider setting up a second party room, maybe even with another TV.

2. Set up soft drinks, water and fruit juices as well as beer.

3. Go for the traditional but with a twist. Serve chicken wings that just about everyone can enjoy, such as these:

Gluten-Free Crispy BBQ **Chicken Wings**

(2) 4.5-ounce bags Crunchmaster Sea Salt Multi-**Grain Crackers**

1 cup gluten-free barbecue sauce — use divided 1/2 cup honey — use divided

4 pounds chicken wing drumettes

Pour 3/4 cup of the barbecue sauce and 1/4 cup of the honey in a large plastic storage bag and mix. Add the chicken wings, close the bag and toss several times to coat the wings with the sauce. Let sit in the refrigerator for at least 30 minutes or up to 24 hours. Preheat oven to 450 degrees. Spray two baking sheets with gluten-free, nonstick cooking spray. Grind the Crunchmaster Sea Salt Multi-Grain Crackers in a food processor or blender to fine crumbs and pour onto a dinner plate. Remove a chicken wing from the marinade, roll in the cracker crumbs to coat and place on prepared baking sheet. Repeat with remaining

chicken wings. Discard the marinade. Spray the tops of the wings lightly with gluten-free, nonstick cooking spray. Bake for 25-30 minutes or until browned and cooked thoroughly (registering 165 degrees on an instant-read thermometer inserted into the thickest part of the wing). Combine the remaining 1/4 cup barbecue sauce with the remaining 1/4 cup honey and serve with the wings for dipping.

Makes about 30 wings. You can use other Crunchmaster crackers for dipping and for hors d'oeuvres. Varieties include Multi-Seed Crackers, Multi-Grain Crackers, Multi-Grain Crisps, 7 Ancient Grains Crackers, and Popped Edamame Chips.

Crafted to fit a mindful, modern life-style, they're full-flavored snacks, oven baked, and varieties are made with brown rice, quinoa, flax, corn, amaranth, millet, sunflower, chickpea and edamame.

They're certified gluten-free and kosher, with no artificial colors or flavors. Many are also non-GMO Project Verified, 100 percent whole grain, low in sugar, and free of saturated and trans fats.

The 23rd Annual Herb Day will be held on Saturday May
6 from 7:00 a.m.-1:00 p.m. in 4-H Hall at the Sedgwick County

Extension Education Center at 21st Street North and Ridge

Road in Wichita. You will learn about selecting, planting, maintaining, and cooking with herbs! The National Herb of

the Year for 2017 is Cilantro / Coriander, which will be fea-

Extension Master Gardeners, and Extension Agents will cover topics relating to growing and cooking with herbs. Plant

vendors from around the region will have herbs and other

Herb Day Events:

• Seminars in the Sunflower Room & the Demonstration Garden

Kansas Grown! Farmers' Market will be going on in the

Seminars in the Sunflower Room:

• 8:30 Herb of the Year - Growing & Using Cilantro / Corian-

• 9:30 Chef Demonstration by Charlott Knapic from Beautiful

Seminars in the Demonstration Garden:

 \bullet 8:00 Composting Demonstration \bullet 9:00 Making Herb Breads

• 10:00 Container Gardening with Herbs, Veggies and Flowers

• 11:00 Making and Using Herb and Fruit Vinegars

• Vendors selling herbs and other garden related items

The featured chef is Charlott Knapic of Beautiful Day Café.

In addition, seminars by members of the Herb Society,

tured in the demonstrations and seminars

By Ashleigh Hett

You know how sometimes you get a wild hair and want to try a new recipe? That's what happened to me a couple of years ago when I went looking for a soft pretzel recipe! After looking at a variety of different methods and recipes, I finally settled for a mix of a few different ones. To me, the pretzel had to be soft and chewy on the inside, yet slightly crisp and salty on the outside. We've made several batches, and they seem to just keep getting better and better. So I'm sharing our recipe with you today!

Soft Buttered Pretzels You'll Need:

- Dough:
- 2 1/2 cups flour1/2 teaspoon salt
- 1 1/2 teaspoons sugar
- 2 1/4 teaspoons instant yeast 1 cup warm water (might
- need a tad more, but wait and see until after you get to mixing the dough together)
- 3/4 teaspoons vegetable oil Wash:
- 1/2 cup very warm (but not boiling) water
- 1 tablespoon baking soda
- Veggie oil (for greasing the cookie sheet)

Coarse Sea Salt Butter

To get started, combine flour, salt, sugar, and yeast in the bowl of a stand mixer.

Pour in the warm water and mix together with a wooden spoon until just combined. Then put it on the mixer and use your dough hook for about 4-5 minutes on medium-low speed.

When the dough is done, it should be soft and smooth. You should be able to touch

it and not have it stick all over your hand!

Now pour your little bit of vegetable oil into a ziplock bag and coat the inside liberally. Place your dough in the bag and set in a warm place to rise for 35 minutes.

Once the dough has finished rising, place it on a greased cookie sheet. This will be your workspace (This way it won't get your table all dirty!) Divide the dough into halves, halve it again, and then halve each glob one more time.. You should end up with 8 pieces of dough.

Now in a shallow bowl or dish, combine the very warm (but not boiling) water and baking soda for the soda wash (It won't dissolve all of the baking soda, but that's okay!) Some people omit this step and don't want to deal with it, but if you want that genuine pretzel taste, you'll want to go ahead and do the wash... It's really very simple to do and makes them taste much better!

Once your wash is mixed, set aside and start forming the pretzels by rolling each piece of dough out into a long rope. Then take the one end and fold it around like you were making half of a heart or circle and press the dough pieces together

Now do the same with the other end - Bring it up

and around like you were finishing a circle, but crisscross it over the other piece of dough.

Now it's time to dunk the pretzels in the soda wash! Just gently set them in the bowl, flip to the other side and remove. Don't leave them in there too long, just a couple seconds on each side will do. (I got to the point where I had to dunk the pretzels while they were still in rope form, before I formed them into a pretzel shape. This seemed to be easier for me!)

Once your pretzels are all formed and dunked in the soda wash, place on a greased cookie sheet and sprinkle with some coarse sea salt. Let rest for 5 minutes and then you'll want to pop them in a 450-degree oven for about 9-11 minutes or until just golden brown.

Pull out of the oven and brush them with some melted butter while they're still

These are a lot of fun to make (you can even do it with the kids!) but they're best eaten right away as they don't store very well.

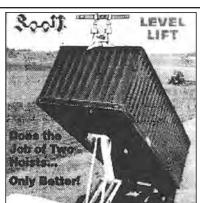

But I can imagine that with how good they are, you won't have any leftovers to store!

Enjoy!

A Complete Cattle Feeding and Marketing Service

Tiffany Cattle Co. **Family Owned And Operated**

With a 19,000 head capacity, Tiffany Cattle Company is large enough to have economics of scale but small enough to provide personal attention. Pen sizes range from 50 to 200 head. A computerized summary of feed, cattle processing, veterinary services and other costs are easily accessible on each pen of cattle.

PRODUCTION SERVICES

Objective is simply: Least Cost Per Pound of Gain! Ration formulation and cost analysis, health program designed and maintained by veterinarian, special pens and attention to sick animals, feed financing, and cattle purchasing available.

MARKETING SERVICES

Marketing finished cattle is top priority at Tiffany Cattle Company. You have the option of selling on the cash market, forward contracting or grid pricing through multiple packers.

- Risk management handled by Tiffany Cattle Company
- Locked commodity prices
 Complete profit/loss statement for each pen · All marketing decisions discussed with and approved by cattle owner
- Reward for your efforts in producing a quality product by selling your cattle on an industry competitive grid

You all know I have a passion for small towns, out-of-the-way places, and unique sites tucked away from the highways. Kansas is full of them and I love discovering them and the people who keep them going. One such person is Debra Parmenter and her special place is Denmark.

The passion expressed by Debra for Denmark, Kansas, would lead one to

613 5th Street, Greenleaf, KS • 5 Bedroom • 2 Bath • Dining Room • Laundry Room Large fenced in yard • 3 car garage. **DONALD PRELL REALTY & AUCTION** Steve Prell 785-713-2191 • Don Prell 785-562-6787 **Vallery Prell 785-713-1466**

believe that she must have grown up there even though San Diego, California, is her home. Alas, no, she did not spend her childhood in Denmark, yet her roots in this small Kansas town go back five generations.

Danish Lutherans established Denmark in Lincoln County in 1869, one of the first permanent settlements in the county while the Plains Tribes were still trying to keep white settlers away. The Danes were fleeing their own troubled homeland in the south of Denmark where Germans laid claim to the land. For these Danes, like thousands of other Europeans, America was the promised land.

It seems to have become that for Debra as well. She explained that the original town location, or "upper Denmark" was going to be bypassed by the Railroad's coming through so the town folk began building "lower Denmark," a mile or so away, in 1917. A hotel, post office, bank, and commercial building -- the Andreason Building -- were constructed. As its heydey came and went, the structures began to crumble. Debra bought the hotel ten years ago and remodeled it for a residence, where she divides her time between Denmark and San Diego.

But across the street, her own family story, in the stones and mortar of the Andreason building, was falling down. Debra spearheaded the creation of the Denmark Preservation Foundation which is dedicated to saving this and other structures. It has asked Greg Rud to be its official photographer, documenting the transformation.

Denmark is one of those places with only a few folks remaining. dozen There is no post office, no school, Denmark is not even officially any longer a town. Yet the Lutheran Church thrives as does the community center beside it. The

annual Pheasant Day Lunch and the Festival of the Nativities are two events that bring visitors to the town.

There are two Facebook pages to follow the success of the project or to learn how to become involved: Get Denmark (Kansas) and the Denmark Preservation Foundation.

Better yet, just head out Highway 18 and drop in. Tell them Around Kansas sent you!

I want to give a shoutout to my media colleague, Dr. Dan Thompson, host of DocTalk. Dr. Dan is always the first person to respond when ranchers are in need and the situation facing ranchers in the recent wildfires is no exception.

DocTalk has filmed two back-to-back episodes featuring interviews on the

wildfires. Dr. Dan interviewed Dr. Randall Spare from Ashland Veterinary Center, Kendal Kay from the Stockgrowers State Bank in Ashland, and and Mark Gardiner who is with Gardiner Angus.

"We wanted to to back to bring you up to speed on what happened," said Dr. Dan, "what's going on in that region now and what you can do to help."

"It's something that has affected many people within the region of southwest Kansas, the Panhandle of Oklahoma, and West Texas," added Dr. Dan. "The heritage and the belongings and the acres and the cows and the homes and the different things that, we as a family in agriculture, this is a moment to bring the people that have been affected by this to your homes, an opportunity for us to have a frank and truthful discussion without any filtering from the media and let you all get the real story.'

For those of us in the Agricultural/Ranching community, these stories are wrenching, but also exhibit the stuff people are made of. Tune in on Mondays or catch Dr. Dan's interviews on YouTube or on our FB pages.

God bless our friends who were devastated by these fires.

Deb Goodrich is the cohost of Around Kansas and the author of The Civil War in Kansas: Ten Years of Turmoil. She may be contacted at author. debgoodrich@gmail.com. Deb appreciates your kind words and letters VERY much!

Taming the Texas Cattle Trade

When Joseph McCoy opened his cattle market at Abilene in 1867 he brought a solution to a vexing situation for everyone in the cattle business. The shortage of beef in the northern states created a great demand for cattle. At the same time, Texans had an abundance of cattle. However, Texas was a long way from lucrative markets in the north. McCoy's "cattle depot" on the Union Pacific in Abilene brought the Texas cattlemen and the northern buyers together in a way that had not been done before. The early trickle of thirty-five thousand head of cattle in 1867 rose to a reported one hundred ninety thousand head on the range around Abilene in 1871. A number of additional markets were in operation by that time to absorb the total drive for 1871 estimated at a record six hundred thousand head!

When McCoy proposed his plan to railroad officials, they doubted he could attract any cattle at all. Now cattle covered the Kansas prairies and glutted shipping corrals. The flood of

cattle exceeded all expectations. What would 1872 bring?

That was the subject of a letter penned on April 1, 1872, by E.S. Elliott, Industrial Agent for the Kansas Pacific Railway. The letter was published in the April 13th edition of the Railroad Gazette in response to a March 16th article that predicted the coming season would see even more cattle on the trail than in 1871 noting, "...after the open lands on the great trail have become too limited for all the cattle...it is probable the cattle will be shipped either as soon as they have crossed the Kansas border, or in Texas itself."

Elliot doubted that would be the case. Cattle were generally put on the trail early in the season. Many of the herds were already well on the way north by the time his words were published. Elliott continued, "...as a general rule, the cattle are not in good shipping condition when they reach the Kansas line. Hence, they must be herded in that region or be kept moving northward. In the

northward progress they get fresher and better grasses. and in a great measure escape the torment of flies, which are much more numerous and vicious in Southern than in Central Kansas." As a representative on the Kansas Pacific, Elliott quite naturally argued to the advantage of his company, writing that even though a new railroad corral had been built south of Abilene on the Santa Fe line at Newton, most of the cattle on the trail continued northward to Abilene. Surprisingly, he supported his argument with the observation that, "Some herds even continued on northward to the Union Pacific." 1871 saw a significant drive all the way north to Schuyler, Nebraska, two hundred miles beyond Abilene.

What may have concerned Mr. Elliott more than the Nebraska market was the mention of the many "shipping stations" south of Abilene vying for the Texas cattle trade. Railroads had recently reached Baxter Springs, Chetopa, and Coffeyville in southeast Kansas served by the old Shawnee Cattle Trail. That was concerning, however, the bulk of the trail herds had shifted to the Chisholm Trail after Abilene became the preferred destination for Texas cattlemen. Mr. Elliott's main concern was Newton, the new town developed by the Santa Fe Railroad sixty-five miles south of Abilene. Newton was directly on the Chisholm Trail, offer-

ing cattlemen the choice to load out on the Santa Fe "shipping station" instead of the using the Kansas Pacific facilities at Abilene. Not only that, but the Railroad Gazette article that had prompted Elliott's letter revealed Santa Fe plans to build a new line to Wichita, even further south on the Chisholm Trail. The implication suggested was that the Kansas Pacific would soon be cut off from the lucrative Texas cattle trade. as evidenced by the observation that the cattle would be shipped soon after their arrival in Kansas. Elliott noted that Abilene

handled one hundred sixty thousand head of cattle in 1871 despite the new shipping facilities in Newton where "one-fifth that number" were shipped. Elliott assured the readers that the 1872 season would provide "a similar experience" even though Abilene was no longer the primary destination for cattle shipped on the Kansas Pacific. Elliott noted that the progress of settlements had driven the Texas cattle trade westward to Ellsworth and Bosland (Wilson) and a terminal between the two known as "New Abilene". Elliott knew there was no rush to sell cattle when they were growing fat on good Kansas grass. Railroads and grass were all Texans needed to successfully market their cattle on The Way West.

Sorghum Checkoff releases videos on sugarcane aphid management

The United Sorghum Checkoff Program recently released eight videos on sugarcane aphid management for 2017. The video series provides growers with information received from Sorghum-Sugarcane Aphid Research Exchange Meeting held in January of this year where nearly 60 researchers from across the country shared the results of Sorghum Checkoff-funded research conducted in

"These sugarcane aphid

videos are a way to provide growers with the information they need to have a successful growing year with sorghum," said Brent Bean, Sorghum Checkoff agronomist. "The sugarcane aphid continues to affect sorghum growers, and we want to make sure farmers are equipped with the latest information on how to best identify and manage this pest."

The video series discusses topics such as sugarcane aphid biology, tolerant versus susceptible hybrids, insecticide rates and applications, control with other pests, late season control. integrated pest management and pre-planting decisions. In the videos, Bean summarizes the research data and best practices concluded from the research exchange meeting and provides growers with steps they should take to defend against the sugarcane aphid.

"The key to managing the sugarcane aphid is having access to all available information," said Bean. "There are numerous factors involved with managing this pest including hybrid selection, planting date and thresholds. Growers should understand all factors that can affect sugarcane aphid management in sorghum."

The Sorghum Checkoff is committed to meeting producer needs through research and education. This sugarcane aphid management video series serves as an opportunity for the checkoff to provide this needed information to growers in a convenient and easily-accessible way. The full video series can be found on the Sorghum Checkoff's YouTube channel.

Pasture management and brush control meeting set for March 30

Recent cattle prices have created a more challenging economic climate for beef producers. A major way to be more competitive in this time of tighter margins is to manage pastures more efficiently. A meeting which will discuss methods to do just that, is set for Thursday, March 30 beginning at 6:30 p.m. This meeting will be held at the Labette County High School Cafeteria located at the corner of High School and 6th Street in Altamont.

Items to be discussed at this event include: "Getting the Most From Your Fertilizer Dollar," "Suppressing Fescue Seedheads to Reduce Fescue Toxicosis" and "Brush Control in Pastures." Speakers for this meeting are Keith Martin, Wildcat Extension District; Dale Helwig, Cherokee County Extension; and Dr. Doug Shoup, KSRE Area Agronomist.

For more information about this meeting please contact the Wildcat Extension, Altamont Office at (620)784-5337 or the Cherokee County Extension office at (620)429-3849.

Kansas State University is committed to making its services, activities and programs accessible to all participants. If you have special requirements due to a physical, vision, or hearing disability, contact Keith Martin, Wildcat Extension District, 524 Huston, Altamont (620)784 5337 or email rkmartin@ksu.edu

NJHA scholarship deadline April 1

This summer, more than \$25,000 of scholarship money is available for active National Junior Hereford Association (NJHA) members who are seniors in high school or currently enrolled in a college program. In addition to scholarships, the NJHA also honors deserving members with junior and senior prospect awards as well as the prestigious junior golden bull award and B.C. Snidow Awards. All scholarship and award applications are due April 1.

The list of scholarships made possible by the Hereford Youth Foundation of America and National Hereford Women include: The Bluegrass and Buckeye Scholarship, Ed Bible Memorial Scholarship, Golden Bull Achievement Award, Hereford Herdsman Scholarship, John Wayne Memorial Scholarship, National tificial insemination studs, Junior Merit Scholarship and the Poll-ette Founders Scholarship Award will be given away at the 2017 Junior National Hereford Expo in Louisville, Ky.

A new addition to the spring scholarships this year is the \$1,250 Charles E. Boyd Memorial Scholarship. Boyd passed away in 2015 and his family and friends have endowed a scholarship in his memory to carry on his legacy in the Hereford breed. Boyd, Mays Lick, Ky., was a third-generation Hereford breeder and past board of director's member for the American Hereford Association. He was a prominent beef cattle judge at all major livestock shows, exhibited several international and national champion Hereford cattle and bred and raised over twenty bulls in major ar-

which is one of the most significant achievements of any Hereford breeder.

"Opportunities are limitless for National Junior Hereford Association members to apply for scholarships and awards made possible by the Hereford Youth Foundation of America and National Hereford Women," said Amy Cowan, AHA director of youth activities and foundation. "This spring we streamlined the process and combined a majority of the spring scholarship applications, so this should make applying easier than ever. Also for younger members, please don't forget about the Prospect and Junior Golden Bull Awards."

Applications for the spring scholarships are due April 1 to the scholarship site, hereford.myreviewroom.com.

REAL ESTATE AUCT

CTI presented 2017 River Valley Extension Appreciation Award

Each year the Governing Board of the River Valley Extension District honors an individual, group, or business who has provided outstanding service to the program with the annual River Valley Extension District Appreciation Award. The recipient of the 2017 River Valley Extension District Appreciation Award is CTI, Harley and Darla Adams, and John and Ann Adams.

Concordia Tractor Incorporated was established in 1967 and is celebrating 50 years of service to the Concordia market area. Harley Adams is an owner partner and the CEO, John Adams is an owner partner and the Concordia branch manager, Darla Adams is the office manager, and Ann Adams is in charge of accounts receivable. Over the years the company has become known as CTI as they expanded the footprint with purchases of the Clay Center, Abilene, and Wamego John Deere dealerships and now has market responsibilities

Harley, Darla, John, and Ann Adams from CTI accept the River Valley District Extension Appreciation Award from District Director John Forshee.

in 13 counties throughout north central Kansas.

The objective of CTI is to enhance and improve the business operations of our customers and raise their level of success. The dedication to producer education is evident through the incorporation of training and meeting rooms in the new facilities in both Concordia and Clav Center. CTI makes these rooms available for any ag producer education-

al program. CTI is a strong supporter of K-State and sponsors and hosts a variety of K-State Research and Extension education programs. CTI goes above and beyond as they have rolled out the cooker and provided the meal or hung around after hours and personally welcomed meeting participants to the facilities, making sure all accommodations are met. With safety as priority. CTI provides not only the facility but also staff to help conduct the Hazardous Occupations Training for youth ages 14 and 15 in the River Valley District each spring.

Beyond program spon-

sorship, CTI is a regular at the 4-H and FFA Livestock auctions of the local county fairs each summer, supporting the agricultural projects of our 4-H members.

Congratulations thanks to CTI for the outstanding contributions to the River Valley Extension District educational program.

USTR nominee shows support for agriculture

U.S. Trade Representative nominee Robert Lighthizer highlighted support for agriculture during his hearing with the Senate Finance Committee recently. During his questioning, he told the Committee that he has a long history with agriculture dating back to 1983 with the Reagan administration, and he acknowledged the potential benefit of the Trans-Pacific Partnership to U.S. agriculture. He also recognized Japan as an important market to access for U.S. agricultural commodities.

"...We need a trade representative who understands the importance of abiding by rules-based trade, who is willing to rigorously enforce agreements with our trading partners, and who will work with the U.S. beef industry to address our many unresolved barriers to trade," said NCBA president Craig Uden. "We look forward to

learning more about Mr. Lighthizer's views on these important issues during the confirmation process."

Senators introduce legislation to support young people in ag U.S. Sens. Jerry Moran terested in a career in agri- projects. By investing in our live. My generation is ready

(R-Kan.) and Joni Ernst (R-Iowa) and U.S. Representative Michael McCaul (R-Texas) recently introduced legislation to support young people in agriculture by creating a tax exemption for the first \$5,000 of income students 18 years of age or younger earn from projects completed through 4-H or FFA. Their bills, the Agriculture Students Encourage. Acknowledge. Reward. Nurture (EARN) Act (S. 671) and the Student Agriculture Protection Act (SAPA) (H.R. 1626), enable students to keep more of the modest income they earn, which can then be invested in education savings or future agricultural projects.

"With the number of new farmers trending downward and more mouths to feed than ever across the globe, Congress must support young people who are inculture," Moran said. "This bill is one step we can take to encourage those involved in FFA and 4-H to turn their modest income from the agricultural projects into savings, money for education and training, or toward a future project. Farming kids across the country represent the future of a critical industry and way of life, and this legislation represents an important investment in the next generation."

"Ensuring members of student organizations like 4-H and FFA are afforded every opportunity to succeed is not only important for the student's future, but the future of our nation's agriculture," said Ernst, a former member of the 4-H. "I'm proud to support the Agriculture Students EARN Act to allow our future farmers to gain valuable experience and skills through hands-on

students' futures, we are in- to accept the challenge of vesting in the next generation of our nation's leaders that will be on the forefront of agricultural innovation and production for years to come."

"We must do more to encourage our future farmers to stay in the farming business so our country can maintain a secure and steady food supply," said McCaul. "These students across the nation today represent the future of agriculture, and enabling them to succeed means we all succeed. That is why I am proud to reintroduce the Student Agriculture Protection Act. This bill would eliminate unnecessary barriers for our young farmers to ensure the U.S. remains outfitted with innovative minds that have allowed us to be the world leader in the agricultural industry."

"Recruiting and retaining the next generation of young people to the family farm or to other agricultural pursuits starts here; it starts with legislation like the Agriculture Students EARN Act and the Student Agriculture Protection Act," said National FFA Western Region vice president Trey Elizondo. 'This proposal would undoubtedly enable me and other agricultural education students to strengthen agriculture and support the communities in which we

feeding, clothing, and sheltering our world, and this legislation helps us accept that challenge."

Typical 4-H and FFA projects include showing animals at local and state fairs, growing and harvesting crops, building agricultural mechanic projects and many others. Ag Students EARN would lower the tax burden on the students and give them an opportunity to invest more of what they've earned in future projects, college funds or savings accounts.

"The Agriculture Students EARN and Student Agriculture Protection Acts will significantly impact student agriculturists." said Chapman, Kansas, FFA Member Natalie Harris. "Lots of young people across the nation, like me. are trying their hardest to begin their own supervised agricultural experiences. Any help we can get to make it easier on us to apply what we are learning, to eliminate paperwork, and to strengthen agriculture would be extremely beneficial and appreciated."

Supporters of the legislation include National FFA Organization, National 4-H Council, American Farm Bureau Federation, National Farmers Union and National Young Farmers Coalition.

SELLER: HOWARD NEFF

Agricultural Business Council honors three agribusiness leaders

The Agricultural Business Council of Kansas City honored three of the region's leading business figures on March 16 at a luncheon in the Chamber Board Room in Kansas City's historic Union Station. Agricultural Business Council chairman Cliff Becker noted the honorees are champions for agriculture in separate but very key areas in the region.

The honorees were:

Glen O. Klippenstein, Klippenstein Farms, Maysville, Mo. Klippenstein rose to prominence as the partner/operator of GlenKirk Farms which was one of the nation's top purebred cattle operations. From 1966 to 1993, GlenKirk Farms sold more than 7,000 bulls and 7,500 females into all 50 states and 22 countries. His industry and civic service has included: two-term chairman of the National Beef Promotion and Research Board; chairman, American Polled Hereford Association; director, National Cattlemen's Association; member and vice chair of the Federal Agricultural Mortgage Corporation Board; CEO of the American Chianina Association; and as a member of both the Missouri State House of Representatives (2011-2013) and Missouri Senate (1993-94)

Ken McCauley, K&M Farms, White Cloud. Mc-Cauley, along with his wife, Mary, and son, Brad and his wife, farm corn and soybeans on 4600 acres of no-till cropland. McCauley is a past president of the National Corn Growers Association (2007). He is also a member and past chairman of the Kansas Corn Commission, former board chair of the Kansas Corn Growers Association, member of the National Association of Farm Broadcasters Board. and trustee of Iowa Township, Doniphan County, Kansas.

Dr. Thomas L. Payne, College of Agriculture and Natural Resources (CAFNR), University of Missouri. Dr. Payne has just retired from his position as vice chancellor and dean of CAFNR, a position he held since 1999. An entomologist by training, he was head of the Entomology Department at Virginia Polytechnic Institute from 1987-1993, before moving on to the Ohio State University where he was associate vice president from 1993-1998. His tenure was marked by growth in the college's research programs, recruitment of world-class faculty members and an increase in private funds raised in support of the college.

The honorees received the Council's highest award, the Jay B. Dillingham Award for Agricultural Leadership

and Excellence. "These individuals have had a positive and lasting effect on our community, said Becker. "They are strong examples of what being an advocate for agriculture can accomplish."

Pictured are, from left: Cliff Becker, Farm Journal Media & chairman, Agricultural Business Council of Kansas City; John Dillingham, JoDill Corporation; Ken Mc-Cauley, K&M Farms; Glen Klippenstein, Klippenstein Farms; Dr. Tom Payne, University of Missouri; Bob Petersen, executive director, Agricultural Business Council of Kansas City.

Kansas State University animal science students earn spot in nationals

A team of Kansas State University animal sciences and industry students won the 2017 Midwest Regional Animal Science Academic Quadrathlon, earning them a spot in the national meet this summer.

Kansas State beat 12 teams from other universities. The competition includes four events: laboratory practicum, written exam, oral presentation and quiz

Team members include Jenna Chance, sophomore, Lebanon, Ind.; Cameron Hayden, junior, Cassopolis, Mich.; Taylor Ochsner, junior, Andover; and MaRyka Smith, senior, Hoyt. The team is coached by assistant professor Karol Fike.

In the laboratory practicum, the team demonstrates its ability to perform physi-

mi. S, 1 mi. W, ½ mi. N

cal skills. The work at each station usually involves a species such as beef or swine or a disciplinary area such as nutrition or meats.

The written exam questions may involve any area related to animal production and products. Each team works on one exam, dividing the questions as they wish.

In the oral presentation, the students may choose from a list of topics related to animal agriculture. They have 60 minutes to prepare the presentation. This is an exercise in cooperative problem solving.

In the Quiz Bowl, questions may be on any topic that relates to animal agriculture and that can be answered in a short period of time.

Kansas State won the lab-

Pictured is the champion team with team sponsors, from left are Jim & Carol Brown, Fourth & Pomeroy president; Joe Ebert, Fourth & Pomeroy vice president and general manager; MaRyka Smith, ASI senior from Hoyt; Cameron Hayden, ASI junior from Cassopolis, Michigan; Taylor Ochsner, ASI junior from Andover; Jenna Chance, ASI sophomore from Lebanon, Ind.; Zita Milligan, Fourth & Pomeroy CFO; and Karol Fike, KSU ASI assistant professor and quadrathlon coordinator.

Competitive Trail Ride returns to Sand Hills "Come Ride With US!" rides, we have been edudistance within a specified

The North American Trail Ride Conference (NA-TRCTM) will be holding its fourth annual competition April 21-23, 2017 at the Sand Hills State Park in Kansas. The event goals are to increase awareness about NATRC, to showcase the wonderful equine camping facilities at Sand Hills State Park and to raise funds for 4-H through a tack sale. Exploring Sand Hills has been the largest trail ride competition for the past 3 years in a 9-state region, NATRC's Region 6

is a non-profit organizariders of all equine breeds over 55 years, through these

folks about how to care for and manage horses ridden over long distances. The competitors are friendly and helpful to new contestants. NATRC is offering a free membership to all first time members." An NATRC competitive trail ride covers a measured and marked

window of time. The judging begins at the preliminary examination and ends at the final examination one or two days later. Judges evaluate the equines (horses. ponies, and mules) on condition, soundness and trail manners. They evaluate the riders on horsemanship as it applies to trail riding and

oratory practicum and written exam, placed fourth in the quiz bowl and fifth in the oral presentation to win the regional competition. The team is sponsored by

Fourth and Pomeroy Associates, Inc. of Clay Center. Joe Ebert, vice president and general manager, is a 1971 Kansas State graduate in animal sciences and industry, and Jim Brown, retired president, is a 1959 graduate in feed science and management.

The regional competition followed a local quadrathlon in February, where 17 teams of Kansas State students competed to move on to the regional competition. The national competition will take place in July in Baltimore, Md., held in conjunction with the American Society of Animal Science meetings.

State Park

caring for a horse naturally (without drugs or artificial appliances) during and after a day on the trail. The emphasis is on education, safety and sportsmanship in a fun, family-oriented environment. The novice and competitive pleasure classes compete about 15 miles per day, which is about four to five hours of riding at an average pace of roughly 4 mph. The open classes ride about 27 miles per day at an average pace of around 5 mph. The management team has gone all out to make Exploring Sand Hills a great introductory ride. Anyone age ten or older is welcome to compete. There will be a coach available to help first time competitors. All contestants will receive gift bags with coupons, samples and literature from sponsors. Some of this year's sponsors include Allen Samuels auto dealership, Riding Warehouse, Purina Mills, Platinum Performance, Morton Salt, Midwest Super Store auto dealership, and Valley Vet and Dillon's Market Place.

Meals are available for purchase. Bryton Stoll, http://brytonstollmusic. com/, will provide live entertainment during dinner Saturday evening. After dinner, Air Force Captain Tim Finley will talk about his experiences competing in the Mongol Derby, the longest horse race in the world spanning 621 miles over ten days on 28 different horses. In addition, there are great awards and door prizes, a silent auction, and a tack sale. The 4-H is in need of tack consignments.

Campsite and ride reservations are required. Spots fill up fast. Horses will have their own individual corrals For more information, go to www.natrc.org or contact Liz Klamm at lizandvk@att net or call/text 620-694-9336. To view an introductory video, go to http://www.natrc.org/ what_to_expect_Video.htm.

Surveys look at what makes farmers try new practices

Change is never easy. But when it comes to adopting new agricultural practices, some farmers are easier to convince than

A group of researchers at the University of Illinois wanted to know which farmers are most likely to adopt multifunctional perennial cropping systems trees, shrubs, or grasses that simultaneously benefit the environment and generate high-value products that can be harvested for a profit.

"We surveyed farmers in the Upper Sangamon River Watershed in Illinois to learn their attitudes about growing MPCs on marginal land. We then looked at their demographic data to classify people into different categories related to their adoption potential." says University of Illinois agroecologist Sarah Taylor Lovell.

Using statistical clustering techniques, the team discovered that survey

categories. The "educated networkers" and "young innovators" were most likely to adopt MPCs. On the other end of the spectrum, survey respondents classified as "money-motivated" and "hands-off" were least likely to adopt the new cropping systems.

The goal of categorizing farmers was to tailor strategies for each group, given their general attitudes. "If they're very unlikely to adopt at all, we probably wouldn't spend a lot of time worrying about those groups," Lovell explains.

However, Lovell thinks some low-likelihood adopters could be swayed. "One of the groups—the one we called "money- motivated"-was really connected with GPS in their yield monitoring, so we thought we could target that. We could review high-resolution maps of their farms to point out the areas that are unproductive for corn and

respondents fell into six the case that alternative perennial systems could bring in profits," Lovell

> High-likelihood adopters were motivated by environmental concerns, and were especially interested in converting marginal land to bioenergy crop, hav. or nut production systems. "Farmers were probably most familiar with bioenergy grasses and hay," Lovell explains. But it was important to them that an existing market was in place for MPCs products.

> Another major factor was land tenancy. Considering that most MPC crops don't mature for years after planting, rental contracts would need to account for the long-term investment.

> "The person leasing the land might be really interested in agroforestry or perennial cropping systems," Lovell says. "The

4-H Inc. Building. WATCH FOR SIGNS!

lease arrangement has to be long enough that the farmer will get back their investment in that period. For example, some of the nut crops take a long time to mature. But if you integrate some of the fruit shrubs, they'll become productive in maybe three to four years. You could get an earlier return on investment in those cases.'

Lovell's graduate students—housed in the crop sciences department at U of I—are now following up with several of the farmers who were interested in MPCs and offering custom designs to establish the new cropping systems on their land.

"That was part of the overall goal for this study. We wondered if the barrier to adoption is a lack of information about design options and the economic potential," Lovell says. "If we

overcome that barrier by developing good planting plans, projecting the market economics, and providing them with that information, will that help them implement the change?'

Stay tuned.

The article, "Identifying barriers and motivators for adoption of multifunctional perennial cropping

systems by landowners in the Upper Sangamon River Watershed, Illinois," is published in Agroforestry Systems. Lead author Chloe Mattia and co-author Adam Davis are also in the Department of Crop Sciences at U of I. Funding was provided by the US-DA's National Institute of Food and Agriculture.

89 ACRES ON ROCK CREEK IN CHASE CO. WILDLIFE & ROCK CREEK, SELLS AT NOON

SATURDAY, APRIL 8, 2017 — 10:00 AM Auction Location: 1339 Rock Creek Rd., COTTONWOOD FALLS, KS DIRECTIONS: From Cottonwood Falls, go 7 miles South on Hwy. 177 to Rock Creek Rd. (Bazaar Schoolhouse) Turn west on Rock Creek Rd. go 4 miles to property.

Property of ELIZABETH "BETTY" J. PINKSTON & the Late PHILL PINKSTON

DESCRIPTION: This property has it all! Approx. 89 acres of beautiful Flint Hills in Chase Co with Rock Creek flowing through the property. There are approx. 63 acres of Native Grass and timber and 26 acres of cropland. The Native Grass pasture sits to the south and rises high above the valley with beautiful views in every direction. Rock Creek flows from west to east and is spring fed with a rock bottom and a small waterfall. The timber lines the creek and covers the foot of the pasture that transitions into the cropland. With abundant wildlife, you will want to watch the video of some large whitetail bucks we have seen! The cropland lays south of Rock Creek and consists of the following soils: 63.2% Ivan Silt Loam, occasionally flooded and 36.8% Reading Silt Loam, rarely flooded. Located 4 miles west of Bazaar rarely do properties in the Rock Creek Valley ever come available don't miss your opportunity to own a piece of the Flint Hills!

lansas State teams with ag research sites

acreage south of Hutchinson has been an outdoor classroom for farmers.

Those first years, it was wheat and fertilizer research, along with studies on alfalfa, oats and sorghums - all in an effort to equip farmers with the best

information and tools to help boost productivity and feed the world.

Decades later, the idea is the same, said agronomist Gary Cramer. He and his technicians still investigate fertilizer use, along with tillage methods, seeding rates, cover crops and crop rota-

challenges, Cramer, along with others here, is working to make the South-Central Kansas Experiment Field a premier research center. "We are just trying to

continue to do something that helps the farmer," said Cramer as he surveyed a plot of canola.

"What I want to do is make this a regional educational center – expand it not just for research where no one shows up until you have a field day." he said. "We are always open to the public. I'd be happy to show anyone around the place and what we have going on.'

The Hutchinson News reports Kansas had just become a state when President Abraham Lincoln signed into law an act that would transform agriculture and education. The Morrill Act of 1862 directed states to create institutions of higher learning for the study of agriculture and engineering, with each eligible state receiving 30,000 acres of federal land for that purpose.

Kansas State University, established in 1863, became the nation's first land-grant university.

The land-grant concept was a success, but it was determined that it was incomplete, according to K-State. While agricultural could be taught in the classroom: in real life, farming, ranching and other research was conducted in highly variable and localized outdoor environments, according to the college. To expand the landgrant mission, the Hatch Act of 1887 was passed which provided federal funds to states to establish a series of agricultural experiment stations under the direction of

each land-grant university.

was further expanded by the Smith-Lever Act of 1914 to include cooperative extension, the sending of agents into rural areas to help bring the results of agricultural research to the end

A network for research centers and fields now spans across Kansas, including in Garden City, Colby, Hays and Parsons, said Gary Pierzynski, the head of Kansas State's agronomy department. By having multiple locations in different climates and soils, researchers are able to determine what works best in each area.

These research sites focus on three different missions, he said.

One is what is affecting farmers at present - such as sugarcane aphids and the

Another is what producers might need three to five years down the road, or longer – such as new varieties and genetics.

Also, research is done on new, alternative crops. Over the years that has included canola, cotton and sesame.

"It is a very important system to Kansas agriculture," Pierzynski said.

The South-Central Experiment Field is part of this mission. The 160-acre parcel on South Dean Road was established in 1951 on the U.S. Coast Guard Radio Receiving Station southwest of Hutchinson. The two-story brick home that was part of the Coast Guard station still stands, remodeled into offices and meeting space.

In March 2004, the field expanded. About 300 acres of land near Partridge was donated by George V. Redd and Mabel E. Bargdill for use in developing and improving plants and crops.

Cramer has been managing these locations for four years, continuing the effort by his predecessors to expand Kansas agriculture.

While he didn't grow up on a farm, Cramer lived in a small, rural town in Oklahoma. At 14, he began working eventually earned his doctorate in agronomy from the University of Nebraska.

He worked for Monsanto for 17 years, doing field research. Among his duties was research with grapes, orchards and forestry in New England, no-till work in Kentucky and then to Kansas where he helped develop the weed compound Maverick - an herbicide for wheat.

After operating his own contracting research company for a while, he took the job as the Sedgwick County Extension Agriculture Agent in 2001.

He moved into the agronomist in charge position at the south-central field in 2013.

"I have a natural curiosity of how things work," he said. "I like doing research and I like working with the farmers, as well."

Among the research done here includes everything from wheat and canola rotations to variety improvement, seed selection and alternative crops.

Experiments deal with problems related to production of wheat, grain and forage sorghum, oats, alfalfa, corn, soybeans, cotton, rapeseed/canola and sesame, among others, said Cramer. A large portion of the research program is dedicated to wheat and canola breeding and development and cropping systems.

He said some of the work deals more with yield and quality traits.

Cramer said he is working with Dow Agrosciences on short-season cotton varieties suitable for this area - which is the northern boundary of cotton country.

"We really push the envelope when we are waiting for harvest," said Cramer. "We could potentially get caught early with a freeze, but the shorter maturing varieties are really working well.'

Also among the cotton traits is a variety with 2,4-D resistance, which could

solve an issue causing havoc in many Kansas cotton fields.

"I'm surprised we get the yields that we have with cotton," he said. "We will get hit with 2-4D drift at least once if not multiple times in a year. But it is working - the new variety. ... It's night and day what it is going to yield. I'm getting anywhere from one to three bales an acre."

Kansas State wheat breeder Alan Fritz also is doing research on different varieties he is developing, as well as Mike Stamm, a canola breeder. The U.S. Department of Agriculture also does research at the

Cramer said he also plans to do research looking at sorghum and the sugarcane aphid.

He is also is doing research for a company in Wichita that grows the organisms for seed treatments.

"I do some work with them on new micro-organisms on soybeans, wheat, triticale," Cramer said. "We are looking for, ultimately, increases in yields - that is the major objective.'

Cramer said the research farm doesn't get any funding from the state. Limited funds are funneled from K-State, but a majority of the farm is funded through the crops it grows, as well as grants.

The purpose of the field is to evaluate crops in various environments, including different soil types and irrigation.

'The objective is to help the farmers make as much as they can off the crops they grow," said Cramer.

He has two full-time technicians, as well as student workers. Teaching others is one of the joys of the job, as well as continuing to learn new things every day.

"I enjoy it," he said of his job. "I enjoy getting outside and working with the crops and working with the students from Hutchinson. I try to help them in terms of increasing their knowledge."

spice tins); DeLaval inc.: (no

The Flint Hills Beef Fest Olma Peak Award for the pen of steers with the highest combination of placings – first in the grass futurity, twelfth in the live show, fifth in the feedlot and eighth in the carcass - was presented to F&F Feeds, Harry Fowler of Emporia.

ON THE EDGE OF COMMON SENSE

Grandpa's Time

A friend and I were reminiscing about our old folks; simple farmers. Life today is more complicated today, we observed, more stress-

He talked about his Grandma keepin' house in the hill country of Texas. Simple, he said. No electricity, no phone, a hand pump outside for water.

Saturday was wash day. A big kettle over an open fire, the men sliverin' homemade lye soap for the kettle. Washin' clothes in the boiling water and wringin'

'em out in the gas-powered Maytag. Goin' to church on Sunday. Grandpa choppin' wood, doin' chores, whackin' cedar for spendin' money.

I remember my Dad's family. Milkin,' cannin,' choppin,' cotton. Grandma lived for 85 years in a house with no runnin' water. Killin' a chicken for Sunday dinner. Musicals anytime a fiddler rosined up. Plowin' with a span of mules. Sellin' eggs in town for pocket money.

Yeah, the good life.

I look around at the pressures of farming today and on the surface, it does seem more demanding. programs. Government environmental considerations, public land use, the EPA, unwanted horses, and the I.R.S. Commitments to home, church, county and country, the Soil Conservation Service, the P.C.A., school board, Stockgrowers Assn., and the Fair Board. Kids with band practice, basketball practice, 4-H meetings, car payments and peer pressure. The constant barrage of national issues that the television insists we be concerned about!

But, do we really work harder and worry more than Grandpa did?

I ascribe to the Coyote Cowboy Proverb: "Be it work or worry, people expand to fill the vacuum."

Does a family tryin' to make a livin' on 180 acres work or worry less than the C.E.O. of General Motors? Does a migrant worker sleep any easier than the Chief Justice of the Supreme Court? Does the editor/owner of a local newspaper put less effort into his job than the editor of the N.Y. Times?

I think it's probably easier to raise twenty acres of corn today than it was in the old days. Just the hand labor alone would support my statement. But no modern farmer would raise only twenty acres of corn! He expands to fill the vacuum! Gotta justify the machinery!

But failure of the crop, regardless of size, kept Grandpa awake at night just like it does us.

So, was life less stressful in the good ol' days? It's hard to say.

Choppin' wood to heat the house in 1935 required as many hours as it takes to raise the 100 extra acres we have to grow to pay the electric bill. It's just that a tractor, a plow, a planter, and a combine cost more than an axe.

USDA announces \$6 million to aid fire-affected farmers and ranchers in midwest

The U.S. Department of Agriculture (USDA) announced the availability of more than \$6 million in funding to implement practices that will help private farmers, ranchers and forest

landowners affected by the wildfires in Kansas, Oklahoma and Texas.

"We have seen the devastating effects of these wildfires on agricultural operations and the funding

announced today can help communities of farmers and ranchers start the process of recovery," said Acting Deputy Agriculture Secretary Michael Young. "USDA is here to offer assistance, and I encourage producers who experienced losses to take full advantage of our financial and technical assistance to aid in their recovery efforts and alleviate part of the financial burden caused by these tragic events."

The funding, made available by the USDA's Natural Resources Conservation Service (NRCS) through the Environmental Quality In-

centives Program (EQIP),

as they begin to restore scorched grazing land, rebuild fencing, protect damaged watersheds, and implement various conservation measures to mitigate losses. EQIP is a voluntary program that provides financial

will assist local producers

and technical assistance to agricultural producers to help plan and implement conservation practices that address priority local and state resource concerns Producers must submit a complete program appli-

cation, establish "farm records," and other documentation to support eligibility to be considered for financial assistance through EQIP. Step-by-step assistance can be found at http:// www.nrcs.usda.gov/getstart-

States will begin accepting applications in the near future. Producers in the affected counties are encouraged to check with their local NRCS service centers for additional information.

In the steer carcass contest at the Flint Hills Beef Fest, first place was entered by Matt & Stacie Horton of Americus.

It's time to come home.

You are certain to find several bulls that meet your goals. Listening to the needs of the commercial producer drives every decision we make

- Year-around Resources -
