

Collaboration is key when dealing with challenges

By Donna Sullivan,
Editor

Mike Teague knows a thing or two about dealing with disasters. Following a nearly 30-year career with the Army Corps of Engineers, where he worked to mitigate the effects of drought in the state, he was appointed Oklahoma's first Secretary of Energy and Environment. "I retired from the army, went to work for the state as the secretary of energy, and oil prices tanked and earthquakes spiked," he told the audience at the Governor's Water Conference held recently in Manhattan.

Whatever the disaster, Teague believes getting all the stakeholders together to work on the problem is critical. But groundwork needs to be laid ahead of time. "If there's a slogan around disaster response," he said. "It's don't be trading business cards at the disaster site. You're too late."

He recalled several years ago when CBS news sent a crew to Oklahoma to cover the drought. "We went out to Lake Tenkiller and their whole theory of the story was, Oklahoma is in a drought and Lake Tenkiller has a hydropower plant, so Oklahoma had no electricity because they were in a drought." As they toured the power plant and the turbines spun and generated power, they spent the next hour with the producer and Jim Axelrod, explaining how you manage drought in a state like

Michael Teague, Oklahoma's first Secretary of Energy and Environment, spoke at the Governor's Water Conference earlier this month. His message was one of collaborating with stakeholders when dealing with disasters, as well as being proactive and heading off potential problems.

Oklahoma. "You get all the stakeholders together and you talk about who needs water, when, where, how much and what water quality it needs to be and you just figure it out," Teague explained. "But if you're walking into the room with those stakeholders and it's the first time you're introducing yourself, you're late. It's way too late." According to Teague, Axelrod kept pushing, unable to believe that the answer to the water problem was to sit everyone around a table and figure it out. He asked what they would do in thirty days if there was still no rain and the drought continued to worsen. "The answer is still and will al-

ways be the same," Teague insisted. "If you want to solve something, you put the right stakeholders at the table and you figure out how to get to 'yes.'"

Teague saw his philosophy tested again when the ground beneath him started shaking. "When I started with the state, I had no idea that Oklahoma had an earthquake problem," he admitted. Historically the state had experienced approximately three or four earthquakes over 3.0 magnitude per year. Starting in 2012 they went from 36 to 180, then from 585 to 907 earthquakes above a 3.0 in a single year.

"So I bring all these state agencies in this new

job of Energy and Environment and we sit around the table," he described. When he asked each agency to name the top three things they were working on, he learned that four agencies were working on earthquakes, but none of them were working together. "That's not the right example of state government," he asserted. "It's also not the right example that just those state agencies can solve all the problems by themselves."

In 2014 Oklahoma governor Mary Fallin announced a Coordinating Council on Induced Seismicity, with Teague at the helm. The group has met every month for three years and along with the state agencies includes representatives from the oil and gas industry. Teague said initially the response

to their inclusion was that it was a little like letting the fox into the henhouse, since their injection wells are linked to the increase in earthquakes. "But who do you think knows best what's underneath the ground under the state of Oklahoma besides the guys that are thumping around looking for oil and gas?" he asked. "They've been great partners."

Oklahoma State, Oklahoma University and Texas University are also part of the council, as a great deal of research on earthquakes is taking place on college campuses.

With all of the efforts, the state has gone from 907 earthquakes to 623. "We're not done yet," Teague said. "We're going to keep meeting and keep talking about it every single month until we get this problem fixed."

When assembling any problem-solving committee, Teague says it's important to remember that the first meeting is going to be a little rough. "There's going to be folks that are going to sit there with their arms crossed," he illustrated. "They really don't want to be here and they definitely don't want to sit next to 'that person.'" He continued that the first meetings are about bringing the problems to the table and building collaborations. Eventually the collaborations begin happening outside of the meetings and solutions are brought to the table.

Teague believes the work put in by the Kansas Water Office to address diminished capacity and subsequent dredging of

the John Redmond Reservoir is a good example of collaborative thinking. He adds that it was a proactive approach rather than a reactive one, and has changed Corps policy on a national level. "You can take this exact same idea of bringing people together to solve problems and look forward," he said.

He pointed out how the Water Board began working on the Governor's 50-Year Vision for the Future of Water in Kansas by bringing all the stakeholders together, from ag users to municipalities and university researchers. "Everyone at the table comes with a different 'why,'" Teague said. "We should be grateful that people show up to the meetings for different reasons. We should not only accept it, we should embrace it. If you're sitting at your table and everybody thinks the same as you do, you need to move tables. Because you're not getting anywhere. We should embrace the people that have different opinions."

Pointing out that along with our people, water continues to be one of the state's most precious resources, Teague emphasized the importance of ongoing work and collaboration. "We've got to start planning now what we're going to do in the future," he said. We shouldn't wait until it's a disaster to solve some of these problems. If you bring everyone in and get everyone leaning towards how do we get to 'yes,' we really can solve a lot of different problems."

Sec. Perdue: U.S. farm exports climb to third highest level on record

U.S. agricultural exports totaled \$140.5 billion in fiscal year (FY) 2017, climbing nearly \$10.9 billion from the previous year to the third-highest level on record, U.S. Secretary of Agriculture Sonny Perdue announced. As it has done for well over 50 years, the U.S. agricultural sector once again posted an annual trade surplus, which reached \$21.3 billion, up almost 30 percent from last year's \$16.6 billion.

"U.S. agriculture depends on trade. It is great to see an increase in exports and we hope to open additional markets to build

on this success," Perdue said. "I'm a grow-it-and-sell-it kind of guy. If American agricultural producers keep growing it, USDA will keep helping to sell it around the world."

China finished the fiscal year as the United States' largest export customer, with shipments valued at \$22 billion, followed closely by Canada at \$20.4 billion. U.S. agricultural exports to Mexico reached \$18.6 billion, a six-percent gain from last year, while exports to Japan grew 12 percent, to \$11.8 billion. Rounding out the top ten markets were the European Union (\$11.6 billion), South Korea (\$6.9 billion), Hong Kong (\$4 billion), Taiwan (\$3.4 billion), Indonesia (\$3 billion) and the Philippines (\$2.6 billion).

U.S. bulk commodity exports set a volume record at 159 million metric tons, up 11 percent from FY 2016, while their value rose 16 percent to \$51.4 billion. The surge was led by soybean exports, which reached a record 60 million metric tons, valued at \$24 billion. Exports of corn, wheat and cotton all grew as well, with the value of cotton exports climbing 70 percent, to \$5.9 billion, wheat exports up 21 percent, to \$6.2 billion, and

corn exports up six percent, to \$9.7 billion.

A number of other products saw significant export increases as well. U.S. dairy exports grew 17 percent to \$5.3 billion, beef exports were up 16 percent to \$7.1 billion, and pork exports rose 14 percent to \$6.4 billion. Overall, horticultural product exports increased three percent to nearly \$33.9 billion, largely driven by an eight-percent increase in exports of tree nuts, which reached \$8.1 billion, the second-highest total on record. Processed food and beverage exports rose two percent to \$39.2 billion.

Exports are responsible for 20 percent of U.S. farm income, also driving rural economic activity and supporting more than one million American jobs both on and off the farm. USDA continues to work to boost export opportunities for U.S. agricultural products by opening new markets, pursuing new trade agreements, enforcing existing agreements, and breaking down barriers to trade.

Complete FY 2017 (Oct. 2016-Sept. 2017) agricultural export data are available from the Global Agricultural Trade System (GATS) database: <https://apps.fas.usda.gov/gats/>.

K-State Livestock Judging Team named reserve national champions

The K-State Livestock Judging Team completed an amazing 2017 season by being named Reserve National Champions recently in Louisville, Kentucky. The team recorded an amazing consistent day with second place finishes in sheep, cattle and oral reasons along the way. Additionally, KSU had a nation's leading four members named to the 2017 All-American Team based on judging accomplishments, academic excellence and industry leadership.

The team earned: Reserve National Champion Team Overall; Champion Team Performance Cattle; Reserve Champion Team Oral Reasons; Reserve Champion Team Cattle; Reserve Champion Team Sheep; Reserve Champion Team All-Performance Classes

Individual Results:

Brooke Jensen – 6th Overall, 5th Sheep, 10th Performance Swine, 7th Beef, 8th Beef Reasons, 1st Performance Beef, 4th Total Reasons

Matt Marion – 9th Overall, 1st Sheep, 1st Beef Reasons, 7th Performance Beef, 6th Total Reasons

Callahan Grund – 6th Performance Swine, 2nd Beef, 3rd Beef Reasons, 4th Performance Beef, 8th Total Reasons

Emily Voris – 8th Swine Reasons

2017 All-American Team: Chase Gleason, Callahan Grund, Brooke Jensen, Leah Scholz

Team Members include: Trevor Birky, Geneva, Neb.; Chase Gleason, Uniontown; Callahan Grund, Sharon Springs; Lauren Ivey, Montpelier, Va.; Brooke Jensen, Courtland; Matt Marion, Montzema, Ind.; Austin Matheny, Mayslick, Ky.; Cole Renner, Norton; Leah Scholz, Effingham; Jessie Vallejo, Gridley, Cal. and Emily Voris, Atwater, Cal.

The Senior Livestock Judging Team is coached by Chris Mullinix and assisted by graduate student Spencer Scotten.

Fat Rats Get Cancer

By John Schlageck, Kansas Farm Bureau
It's holiday time with Thanksgiving just past and Christmas and New Year's Day just around the corner. This means all sorts of good-tasting food – ham, roast turkey, bread stuffing, green beans, cranberry sauce, sweet potatoes, wine and pumpkin pie.

What better time than during this festive period to give thanks for the most wholesome food supply in the world? Yes, Americans enjoy one of the best food supplies on this planet

not only in terms of abundance, variety and cost, but also in terms of safety. A closer look at a typical dinner menu reveals that Mother Nature and her chemicals will be joining all of us who partake of the traditional holiday fare in this country. In a typical soup-to-nuts holiday menu, here are some of the natural chemicals, which in large quantities could be hazardous to a person's health, according to the American Council on Science and Health (ACSH). Such effects

would occur only if the concentrated substances were consumed in excess. Saying this is not intended to frighten some who are already chemical-phobic. For centuries, humans have eaten potentially toxic substances that occur naturally in food.

The natural and man-made toxins, carcinogens and mutagens in the U.S. food supply remain so small they pose no known health hazard, the ACSH reports. A toxic dose of caffeine requires 96 cups of coffee and you would have to eat 3.8 tons of turkey this holiday season to deliver a toxic dose of malonaldehyde.

Mushroom soup, for example, contains hydrazines, which are potent animal carcinogens.

A fresh vegetable tray is chalked full of nitrates. The main entree, roast turkey with stuffing and cranberry sauce, contains heterocyclic amines and malonaldehyde, eugenol and furan derivatives, according to the ACSH.

It's way past time for the American public to stop acting on the presumption that "natural" is safe and "man-made" is always suspect. While both can be toxic in excess, present scientific knowledge indicates neither natural nor man-made food chemicals are hazardous in the quantities we consume on a daily, monthly or yearly basis.

Toxins, carcinogens and mutagens are everywhere in Mother Nature's food supply. It is unwise to panic over minute levels

of man-made chemicals such as the traces of pesticide residues occasionally detected.

If there is a health problem we should be concerned about during this upcoming holiday season, it may be overeating. If you don't watch yourself, you can gobble down more than 2,000 calories easily at one sitting. It doesn't take a food scientist from ACSH to tell you you'll wind up stuffed like a turkey if you eat like that during the holiday season.

As most of us know, excessive eating has been called the "most striking" carcinogen ever discovered in rodent carcinogenicity studies. In other words, "fat rats get cancer."

Remember, when you sit down at the holiday

table this season, leave that last leg of turkey or piece of pie for someone else. You don't have to eat every last roll on the plate, and yes, Fido, the family dog, might enjoy those last three or four spoons of gravy.

Eat moderate quantities of a wide variety of foods this holiday season and throughout the entire year. Despite the presence of Mother Nature's toxins, they are not dangerous when consumed in moderation as part of a balanced, varied diet.

John Schlageck is a leading commentator on agriculture and rural Kansas. Born and raised on a diversified farm in northwestern Kansas, his writing reflects a lifetime of experience, knowledge and passion.

Sen. Moran calls on Commerce Secretary Ross to conduct economic analysis of NAFTA changes to agriculture sector

U.S. Sen. Jerry Moran (R-Kan.) recently signed a bipartisan letter to Commerce Secretary Wilbur Ross asking the administration to conduct a robust economic analysis to evaluate how any changes to the North American Free Trade Agreement (NAFTA) would affect changes to the nation's crop and livestock sectors.

"It is imperative that before any changes are made to NAFTA, or any other free trade agreement, that economic analysis that illustrates the impact on the full supply chain of the industries involved be shared. As such, we request an economic analysis that examines and evaluates the impacts to crop and livestock sectors as a result of any change to NAFTA," the senators wrote.

As the world's top exporter of food and agricultural products, U.S. agriculture depends on access to international markets in which to sell their products. With the fifth round of NAFTA renegotiations under way, the senators were clear that any changes to U.S. trade policy must be positive for agriculture, especially in a time when many farmers and ranchers are struggling financially.

The bipartisan group of senators who wrote to Ross included Sens. Jerry Moran (R-Kan.), John Boozman (R-Ark.), Roy Blunt (R-Mo.), John Cornyn (R-Tex.), Steve Daines (R-Mont.) Joni Ernst (R-Iowa), Jaeff Flake (R-Ariz.), Chuck Grassley (R-Iowa), Heidi Heitkamp (D-N.D.), John Hoeven (R-N.D.), Johnny Isakson (R-Ga.), Claire McCaskill (D-Mo.), Rob Portman (R-Ohio), Pat Roberts (R-Kan.), Mike Rounds (R-S.D.), Luther Strange (R-Ala.), John Thune (R-S.D.) and Thom Tillis (R-N.C.).

The full text of the letter is below:
Dear Secretary Ross,
As Senators representing states with significant agricultural economies, we write to you today to underscore the vital role that agriculture plays throughout our home states and across America. Given your recent comments regarding agriculture and international trade, we find it essential that Congress' voice be heard.

The U.S. is the world's top exporter of food and agricultural products and is an important economic driver that stimulates prosperity and jobs throughout rural America. According to USDA, every \$1 in agricultural exports generates an additional \$1.27 in economic activity, and every \$1 billion in farm exports supports 8,000 jobs. In fact, the data shows the benefits of agricultural trade align with many of the administration's

goals and priorities – supports U.S. jobs, encourages U.S. investment, and fosters economic growth within the U.S.

The agriculture industry does not want to see momentum hindered especially at a time when net farm income has declined by approximately 50 percent over the past four years. It is imperative that before any changes are made to NAFTA, or any other free trade agreement, that economic analysis that illustrates the impact on the full supply chain of the industries involved be shared. As such, we request an economic analysis that examines and evaluates the impacts to crop and livestock sectors as a result of any change to NAFTA.

With 95 percent of consumers residing outside of the U.S., farmers and ranchers must have access to export markets to sell their high-quality product. Free trade agreements have allowed the U.S. agriculture industry to establish itself as a trusted supplier. International markets have taken years to build, and it is imperative that no steps be taken to jeopardize these gains. We must continue to move the global presence of U.S. agricultural products forward, not backward.

As the administration works to strengthen current trade agreements and negotiate new agreements, we ask that you support the important role that agriculture plays in the nation's economy. We look forward to working with you to ensure a strong marketplace for our farmers and ranchers.

Register now for 21st annual Agricultural Technologies Conference January 18-19

More than 175 farmers, researchers, producers, and university folks will gather in Junction City for this two-day event featuring top-notch speakers, delicious meals, and ample time for networking. Hosted by KARTA and K-State Research & Extension, this event always draws a crowd because of its

unique focus on the latest technology and cutting edge precision ag practices, but with a down-to-earth atmosphere. In addition to several noteworthy speakers, the conference also includes research presentations from grant recipients and an interactive evening discussion that is always a

crowd favorite. The funds generated through annual dues and the winter conference are used to provide grants for on-farm research projects and to underwrite workshops throughout the year that help producers learn about new hardware and software in the ag industry.

You can save \$50 on the conference registration by signing up before January 10th, and you can save another \$50 by joining KARTA with an annual membership. Members receive free admission to workshops hosted throughout the year. For agricultural students at post-secondary educational institutions, KARTA offers a discounted student rate of \$75 per person.

In addition to saving \$50 by registering early, you can also save \$25 on your hotel room by taking advantage of a special room block at the Courtyard by Marriott, which closes January 10th. To reserve a room, please call (785) 210-2714. For more information or to register, visit www.kartaonline.org. Follow KARTA on Twitter and Facebook.

This week I was talking to a gentleman with young children. I must confess that I don't remember their ages exactly, but they were all in grade school or younger. He made the comment that they were going to be chasing kids around for a long, long time and it seemed like forever. My response was that it may seem like it when you are looking at it from his end, but you will blink, and they will be grown and leaving home.

Then, just a couple of days later, I was reminded of this myself. Tatum and I were on a road trip to Grandma and Grandpa's house for Thanksgiving. She was driving, yes, I said she was driving, and we were listening to the radio and talking. That was when it hit me, I wasn't just talking to my child, I was having a real live adult conversation with one of my kids.

Don't get me wrong, those kinds of conversations happen all the time and this wasn't the first one, but it was the first time I had ever stopped and taken the time to think about it. I guess it was like the parent lamenting about it being seemingly forever until their kids were grown. As parents we can be right in the middle of life with all its hustle and bustle and not realize just how fast things are changing. In a blink of an eye you go from discussing Hank the Cowdog books to talking about water policy.

The teenagers that you feared would always stay squirrely suddenly become productive members of society who might admit that you are right sometimes (Okay, my kids aren't that old yet, but I can dream of the day). You start hearing from people about how well your kids are doing and suddenly you realize a couple of things. One, that your kids are different in public. More importantly, that despite your parenting skills and mistakes they might turn out okay.

Recently Jennifer and I have been talking about how we are soon to be empty-nesters and just exactly what that might be like. We even got a taste of it about a month ago when Tatum was gone for ten days to the National FFA Convention. I feel guilty, but I must admit that I am looking forward to

having more control over my calendar and not being ruled by kid's activities. I think I am supposed to be sad and sappy about it and I am sure I will be in time, but right now I have seen the future and it is good.

I shared those thoughts with some friends who are empty-nesters and expressed that I was feeling a sense of guilt. Their response was that I should not feel guilty but rather have a sense of accomplishment. We have one purpose as parents and that is to raise our kids, so they can go off on their own and live their lives. An empty nest simply means that we have done our jobs.

It amazes me just how fast we went from new parents to nearly empty-nesters, it truly was a blink of an eye. I enjoyed each phase of parenthood, but I do have a tinge of regret when I look back and see how fast it went. Jennifer and I tried to be intentional about being there as much as we could for our kids but there still are things that we could not attend, and I still feel guilty about those. If I could have any advice for new parents it would be to not pass up anything and take time to enjoy each phase, they pass too quickly.

I apologize if I am being too sappy and I am warning you that this will probably happen again in the upcoming year. However, I had one of those moments on that trip to Grandma and Grandpa's house that make you realize just how fast life is passing you by. I am sure there will be many more of them. It is funny how seemingly slow time moves when you are in the middle of it. However, take a moment to reflect and you understand just how fast time passes you by. I am also sure that there are many of you out there thinking that I have not seen anything yet and you are right.

So, what is my point with all of this? I am not sure other than time passes quickly, and we need to make sure we take the time to stop and enjoy the moment and time we are in. One minute you are talking to the little kid in the back seat and the next you are conversing with the adult in the driver's seat and all you will have done is blink.

TPP trade deal moves forward without U.S.

The 11 members of the Trans-Pacific Partnership agreed on elements of a new trade framework this week without the United States, which pulled out of the pact in January, a

move experts say will put U.S. meat exports at a disadvantage.

"Leaving TPP left the United States at a disadvantage," said Phil Seng, U.S. Meat Export Fed-

eration CEO, noting that U.S. competitors are paying lower duties to export their products in many Asian markets than U.S. producers. "The only bad trade agreement is the one

you're not in," he said. The U.S. meat industry has been pushing for a bilateral trade deal with Japan, one of the largest markets that would have opened to the U.S. under

TPP. Experts say that without the umbrella of TPP, Japan is less likely to enter into agreements with the U.S.

TPP will ease trade among Australia, Brunei,

Canada, Chile, Japan, Malaysia, Mexico, New Zealand, Peru, Singapore and Vietnam. A formal agreement is expected to be signed early next year.

USRSB announces alignment to Sustainability Metrics for supply chain

Recently the U.S. Roundtable for Sustainable Beef (USRSB) announced the release of USRSB Sustainability Metrics, the latest outcome of a full supply chain effort to demonstrate how all participants in the beef industry continue to strive toward improving efficiency, ensuring proper health, nutrition and care of cattle, protecting natural resources, providing jobs, contributing to the economy and improving the financial bottom line.

In 2016, the USRSB released High Priority Indicators to address areas of sustainability most important to the beef industry. Those areas include: Efficiency & Yield, Animal Health & Well-being, Employee Safety & Well-being, Land Resources, Water Resources and Air & Greenhouse Gas Emissions. The USRSB Sustainability Metrics accompany the High Priority Indicators and will provide the basis for operations throughout the supply chain to evaluate their respective operations using a voluntary self-assessment approach.

TCFA is an association member of the roundtable,

Walmart advocates for more third-party certification to measure agricultural sustainability in suppliers

Walmart Stores, Inc. wants a third-party certification process to confirm that production agriculture is addressing climate change and using practices that are deemed sustainable. That's the message Brittni Furrow, senior director of Sustainability of Global Food Business for Walmart, told producers at the Sustainable Agriculture Summit in Kansas City, Missouri.

"We can't come to every one of your operations and check them out," Furrow said. "Within our industry, a lot of agricultural commodities around the world who have created third-party verification create a standard of good products and worth with the non-government officials (NGOs) and the industry to certify your products. It's done with other commodity markets that are traded all over the place."

Furrow noted Walmart is often asked what the retailer is doing to educate consumers. Consumers are driven by various influencers beyond Walmart, especially in the social-media space. She said, that's an area farmers need to watch because younger consumers, like investors, are keyed into issues around sustainability right now.

"Our millennial consumer will be 35 percent of our retail sales by 2020, and they are making it very clear that sustainability matters," Furrow said. "Lots of studies tell us climate change is the number one global concern that the millennial generation cares about, and they are looking to purchase with a brand they trust doing the right work on the issues they care about."

In related news, as a member of the U.S. Round-

table for Sustainable Beef, Walmart and 100-plus other entities representing the entire supply chain, announced the release of a Sustainability Indicator and Metric Report. While that report focuses in great detail on the metrics developed for all segments of the supply chain, it also highlights the USRSB Sustainability Assurance Framework. A framework to provide indicators, metrics and sustainability assessment guides to all types of businesses engaged in cattle and beef production, intended to be driven by voluntary adoption and implementation. At the same time, that framework does not preclude businesses from funding their own efforts around supply chain verification. However, the USRSB as an organization has specifically outlined in the framework that it will not be in the verifica-

tion business.

To read more about the panel, visit the full story by the panel moderator Chris Clayton, ag policy editor for DTN, at <http://tinyurl.com/2018-Walmart-Clayton>.

these metrics resided with the members that represent each segment."

The USRSB hopes this work will continue to demonstrate that the U.S. beef industry is a global leader when it comes to being economically viable and addressing social and environmental issues. To learn more about the USRSB and explore the USRSB Indicator and Metric Summary visit www.usrsb.org/.

2017 Grass & Grain Holiday Recipe Contest

Joyce Jandera, Hanover Wins Holiday Contest

"This is a very quick recipe for apples. Have all ingredients measured ahead of time. May use a colander over water if you don't have a double boiler."

VANILLA APPLE GRATIN

5 apples (about 2 1/2 pounds Gala)
2 tablespoons butter
1 vanilla bean or 1 tablespoon vanilla extract
2 pinches of salt
1/4 cup whipping cream
3 egg yolks
2 tablespoons sugar
1/4 cup sparkling wine (Prosecco) optional

Peel and core the apples and cut each into 12 wedges; set aside. Melt butter in 12-inch broiler-safe skillet over medium-high heat; if using a vanilla bean, split lengthwise and scrape the seeds out into the skillet. Toss the bean in top; if using vanilla extract add at this time. Add apples and sprinkle with a generous pinch of salt. Cook stirring occasionally for 10 to 12 minutes or until apples are golden and just tender. Remove vanilla bean. Meanwhile preheat broiler. In a medium bowl whip cream to soft peaks. Keep chilled. Heat 1 inch of water on bottom of a double boiler; bring just to a simmer. In top of double boiler whisk egg yolks, sugar and a pinch of salt; add wine (if using) and whisk constantly until mixture is thick and doubled in volume (do not boil), 3 to 5 minutes. Remove from heat and whisk 1 minute to set and cool. Fold in chilled whipped cream. The cream may deflate a bit. Spoon the cream mixture over apples in the skillet. Broil 4 to 5 inches from the heat for 1 to 2 minutes or until the topping begins to turn golden (watch carefully). Makes 6 servings. Serve immediately. Wonderful after a heavy meal!

Darlene Thomas, Delphos:

7up SALAD

2 cups hot water
2 packages lemon gelatin
1 bottle 7up
20-ounce can crushed pineapple
2 large bananas
1 cup small marshmallows

Mix together above ingredients and chill.
1 cup pineapple juice
1/2 cup sugar
2 tablespoons flour
1 egg, slightly beaten
2 tablespoons butter
1 cup whipped cream

Combine pineapple juice, sugar, flour and egg and cook until thick. Add butter. Chill and then add whipped cream. Spread over top of gelatin mixture. Chill overnight.

Beth Scriptor, Abilene:

"Here is a good slow-cooker breakfast casserole."

SLOW-COOKER HASHBROWN CASSEROLE

32-ounce package shredded hashbrowns
1-pound package sausage, browned
Green/red pepper, diced (to taste)
Onion, diced to taste (usually a whole one that is not too big)
1 1/2 cups shredded sharp Cheddar cheese
1 dozen eggs, well beaten
1 cup milk
Salt & pepper

Stir all the ingredients together in a large bowl until well mixed (I use a crock-pot liner). Put all in the slow-cooker and set on low for 8-10 hours. This is so nice because breakfast is ready in the morning! Should serve 8-10 people.

Kimberly Edwards, Stillwater, Oklahoma:

ORANGE SPICED SWEET POTATOES

4 tablespoons butter, melted plus more to butter dish
2 pounds sweet potatoes
2 oranges
3 tablespoons honey
1 teaspoon vanilla
1/2 teaspoon cinnamon
1/8 teaspoon nutmeg
10-15 whole cloves

Preheat oven to 400 degrees. Butter the bottom and sides of 9-by-13-inch baking dish. Peel and cut the sweet potatoes into large wedges of equal size and set aside. Zest the oranges into large mixing bowl, then cut them in half. To the bowl add the juice of 1 1/2 oranges and slice the remaining half into 1/4-inch rounds. Set aside the sliced rounds. Add the melted butter, honey, vanilla, cinnamon and nutmeg to the bowl and whisk together. Toss the sweet potatoes in the butter mixture until coated. Transfer the potatoes and butter mixture to the prepared baking dish in a single layer. Pierce the reserved orange slices with the whole cloves and scatter around the potatoes. Bake for 45-50 minutes basting the potatoes with the honey butter mixture about halfway through baking by spooning the liquid from the pan over the top of the potatoes. Potatoes are done when the sauce has thickened and the potatoes are fork tender. Let rest for a few minutes before serving and refrigerate any leftovers.

Dona Schultz, Miltonvale:

FRESH MUSHROOM SOUP

4 tablespoons butter, divided

2 teaspoons chopped onion
1/2 pound fresh mushrooms, chopped
1 quart chicken stock
2 tablespoons flour
1 teaspoon salt
1 cup light cream

Melt 2 tablespoons of butter in a skillet. Add the chopped onion and saute until soft. Next add chopped mushrooms and saute for 2 minutes. Then add chicken stock, cover and simmer for 15 minutes. Melt remaining 2 tablespoons butter. Add flour and salt then cook until bubbly. To this add the mushroom mixture and light cream. Stir the mixture occasionally and heat through. The soup will slightly thicken. Serves 4.

Mary Hedberg, Clifton:

HOLIDAY COFFEE CAKE

2 cups biscuit mix
14-ounce can Eagle Brand sweetened condensed milk (not evaporated milk)
3/4 cup sour cream
1/4 cup (1/2 stick) butter or margarine, melted
2 eggs
1 1/2 teaspoons ground cinnamon, divided
1/2 cup chopped pecans
2 tablespoons firmly packed light brown sugar
1 tablespoon butter or margarine, melted

Preheat oven to 350 degrees. In a large bowl beat biscuit mix, Eagle Brand milk, sour cream, 1/4 cup butter or margarine, eggs and 1/2 teaspoon cinnamon until smooth. Pour batter into a lightly greased 11-by-7-inch baking pan. In a small bowl combine pecans, brown sugar, 1 tablespoon butter and remaining cinnamon. Sprinkle mixture evenly over batter. Bake 40 to 45 minutes or until wooden pick inserted in center comes out clean. Cool in baking dish on wire rack for 10 minutes. Yields: 8 servings.

Linda Kepka, Dorrance:

CHEERRY FLUFF

14-ounce can condensed milk
21-ounce can cherry pie filling
20-ounce can crushed pineapple
8-ounce carton Cool Whip

Drain pineapple well; then combine all the ingredients and mix together. Keep refrigerated.

JoAnne Breault, Wamego:

WHITE CHOCOLATE BROWNIES

1 cup unsalted butter
6 ounces white chocolate, coarsely chopped
1 1/2 cups sugar
4 large eggs, room temperature
2 teaspoons vanilla (real extract)
1 1/2 cups flour
1/2 teaspoon salt

Preheat oven to 350 degrees. Grease a 9-by-13-inch pan or line with aluminum foil or parchment for easy removal and easier cutting. In a microwave-safe bowl combine the butter and chopped white chocolate. Melt in 30-second increments, whisking after each until completely smooth. Whisk in the sugar until completely combined then whisk in the eggs and vanilla. Whisk in the flour and salt. Batter will be thick. Spread evenly into prepared pan. Bake for 30 minutes, covering loosely with aluminum foil halfway through. Test brownie with a toothpick at the 30-minute mark. Insert into center of pan; if it comes out with wet batter the brownies are not done. If there are only a few moist crumbs, the brownies are done. Remove from the oven and cool completely on wire rack. Drizzle melted white chocolate on top of brownies.

NOTE: May add sprinkles on the drizzle before sets up to add a little holiday flair.

Lucille Wohler, Clay Center:

YUM YUM SALAD

16-ounce can crushed pineapple
16-ounce can cherry pie filling
12-ounce can condensed milk
8 ounces Cool Whip Nuts, optional

Drain pineapple. Mix pie filling, milk and pineapple. Fold in Cool Whip. Add nuts if you want them.

G&G Announces Its Annual Holiday Recipe Contest

Nov. 21 through Dec. 19

In observance of the holiday season, Grass & Grain will award the weekly winners \$35 in addition to the prize gift. Recipes received NOW through DECEMBER 12 will be entered in the holiday contest. Enter as often as you like during this period.

BONUS DRAWING

Second chance to win! The names of all contestants will be entered in a drawing from which four names will be chosen. Each of these four contestants will receive \$35. Winners will be announced Dec. 19.

Hometown Heroes 1,000 piece Puzzle

Features a lovely image that celebrates the brave men and women that keep us safe! This classic illustration is sure to give you a sense of nostalgia!

- Once it's completed, put it in a frame for an interesting piece of wall art.
- Artwork by Dan Hatala.
- 26 3/4"W x 19 1/4"L. • Ages 13 and up.

The winner each week is selected from the recipes printed. Send us your favorite recipe. It may be a main dish, leftover, salad, side dish, dessert, or what-have-you. 1. Check your recipe carefully to make certain all ingredients are accurate and instructions are clear. 2. Be sure your name, address and phone number are on the entry. Please include a street address with your recipe entries. A post office box number is not sufficient for prize delivery. Allow 3-4 weeks for delivery. 3. Send it to: Woman's Page Editor, Grass & Grain, Box 1009, Manhattan, KS 66505. OR e-mail: auctions@agpress.com

"Leading the way to your success!"

Amy Feigley, Enterpriser: "My mom would make these dinner rolls at Christmas, Thanksgiving and Easter. They were always a hit with the family and we really enjoyed them with a little leftover turkey in them the next day."

DINNER ROLLS

2 cups milk, scalded
1 cup butter
2/3 cup sugar
2 packages active dry yeast
3 eggs
1/4 cup warm water (110 to 115 degrees)
7 to 9 cups all-purpose flour
Add butter to scalded milk; let cool and pour into a bowl. Add sugar and stir. In a separate bowl, dissolve yeast in warm water. When the milk has cooled, add eggs, yeast and then flour, as needed. Let the dough rise until double. Preheat oven to 375 degrees. Shape dough into balls and bake for 10 to 15 minutes.

Note: Brush melted butter over the rolls right after taking them out of the oven.

Shirley Deiser, Kanopolis:
PUMPKIN DUMP CAKE
29 ounces pure pumpkin
3 eggs
3 teaspoons cinnamon
1 teaspoon salt
1 cup sugar
1/2 cup evaporated milk
3/4 cup melted margarine
1 box yellow cake mix
Cool Whip

Preheat oven to 350 degrees. With a spoon stir first 6 ingredients in a large bowl. Pour mixture into a greased 9-by-13-inch

pan. Sprinkle cake mix on top of mixture. Pour melted margarine on top of cake. Bake for 50 minutes. Top with Cool Whip.

Rose Edwards, Stillwater, Oklahoma:

HOLIDAY PUNCH

6-ounce package cherry gelatin
3/4 cup sugar
2 cups boiling water
46-ounce can unsweetened pineapple juice
6 cups cold water
2 liters ginger ale, chilled
In a 4-quart freezer-proof container dissolve gelatin and sugar in boiling water. Stir in pineapple juice and cold water. Cover and freeze overnight. Remove 2 hours before serving. Place in punch bowl; stir in ginger ale just before serving.

Lydia Miller, Westphalia:

LIGHT CHOCOLATE TRIFFLES

1/3 cup semisweet chocolate chips
4 ounces reduced-fat cream cheese
1/3 cup plus 2 teaspoons baking cocoa, divided
1 1/4 cups plus 2 teaspoons confectioner's sugar, divided

In microwave melt chips until smooth. In a bowl beat cream cheese until fluffy. Beat in 1/3 cup cocoa and melted chocolate. Gradually beat in 1 1/4 cups sugar. Coat hands with powdered sugar and roll chocolate mixture into 1-inch balls. Roll in remaining cocoa or powdered

sugar. Refrigerate at least one hour. Yield: about 1 1/2 dozen. Prep time: 25 minutes plus chilling.

Nutrition Facts: (1) truffle equals: 62 cal.; 2g fat (1g sat. fat); 4mg chol.; 24mg sodium; 11g carb; trace fiber; 1g protein. Diabetic Exchanges: 1/2 starch, 1/2 fat.

Kellee George, Lawrence:

HOLIDAY SALSA

1 package fresh or frozen cranberries
1 cup sugar
6 green onions, chopped
1/2 cup cilantro leaves, chopped
1 jalapeno pepper, seeded & finely chopped
8-ounce package cream cheese
Pulse cranberries and sugar in food processor until coarsely chopped. Stir together with onions, cilantro and jalapeno. Cover and refrigerate several hours or overnight. To serve place cream cheese on serving plate. Drain salsa and spoon over cream cheese. Serve with crackers.

Millie Conger, Tecumseh:
GUMDROP CANDY
2 tablespoons butter
2 bags mini marshmallows
2 bags white chocolate chips
2 cups gumdrops
Melt together butter, marshmallows and chips until smooth. Stir in gumdrops. Spread on parchment paper lined 9-by-13-inch pan. Chill overnight in refrigerator.

Home and Away

Trip to the Dentist

By Lou Ann Thomas

There are few things that cause me as much distress as going to the dentist. I like my dentist as a person, but — he's a dentist. However, I am fully aware there are some good things about going to the dentist. For one, I like chewing so want to keep my teeth healthy and working well.

My dental discomfort begins as soon as I take a seat in the reception area. Sharing space with others who are also feeling nervous does nothing to put me at ease. As I waited for my recent appointment, the man sitting next to me kept fidgeting, talking to himself and moving between chairs. When the dental assistant called my name, I felt relieved to follow her to the back room.

My dentist is fluent in a variety of grunts, monosyllables, hand signals and eye communications, which comes in handy when, after numbing my mouth then filling it with his hands and metal instruments, he starts asking me questions.

"So, how's the writing going?" he asks.
I answer: "Glough."
"Good, good. What are

you working on?"
"Ahh, bleatchur un the fwirr dpareuemut."

"That sounds interesting," he says and I look at him in total awe for apparently understanding what I just said.

But this practice of speaking while numb came in handy later, when I decided to stop by the grocery store on my way home. As soon as I pulled my cart up to the deli department I knew I had made a mistake. "Awhh'll ave ah hawf ouwun auv fladami."

The clerk hadn't had the same training in comprehending garbled speech as my dentist so when she just stared, I pointed to

the salami. She ended up giving me two pounds of Chinese vegetable salad, for which I half-smiled and said, "Haanck uooo."

The rest of my shopping went smoothly until I reached the checkout area where I unfortunately had a chatty cashier.

"Hi! How are you today?" she asked.

"Phhinne."
She looked at me closely and began speaking more deliberately in an attempt, I assume, to help me better comprehend.

"It sure is a nice day, isn't it?" she said slowly.

"Ah yussth came phrum ba dimntist,"

"Oh wow, I can't believe you're driving."

"Oooo nooo, Amn mot drifing, Ahm ah?" I said with a half-laugh indicating I was joking. When my feeble attempt at humor was met with a confused stare I decided to shut both sides of my mouth until I got home.

Once there I discovered the best part of going to my dentist — a well-deserved nap.

Farm Building Edition

Morton Buildings, Inc. becomes 100% employee-owned through stock ownership plan to benefit customers and employees

Morton Buildings, Inc., the industry leader in post-frame manufacturing and construction, earlier this year announced that 100% of the company is now owned by its employees. Prior owners sold their shares to the employees' Employee Stock Ownership Plan (ESOP) Trust, giving current and future employees full ownership of the company. As an employee-owned company, Morton Buildings will continue to operate under its existing business model

and management structure. "This ESOP transaction will have an overwhelmingly positive effect on the company by further strengthening the historical bond among our very capable and committed employees," said John Russell, president and CEO of Morton Buildings. "Full ownership will not only increase retirement security for our Employee Owners, but will also reinforce their commitment to our loyal customer base. Employee

ownership stimulates enthusiasm and changes lives." Morton's ESOP is a qualified retirement plan that can generate significant retirement benefits for Morton Buildings' 1,700 Employee Owners. It is not uncommon for owners of private companies to sell their stock to an ESOP as a means of handling intergenerational wealth transfers, and for Morton Buildings it was the perfect succession plan. The former owners wanted to share

the wealth with the employees who had worked so hard to make the company successful. The result is that Morton's employees will now own one of the 75th largest ESOP companies in the United States, according to The National Center for Employee Ownership. Since its inception in 1903 as the Interlocking Fence Company, the company built its reputation by serving customers and empowering its employees. In 1963, when Henry A. Getz became president,

the business grew dramatically as he restructured the company around the construction business. Mr. Getz changed the name to Morton Buildings in 1965 and continued to lead the company until he retired in 2002. He was highly supportive of the sale to the employees. Today, Morton Buildings is the leader in the post-frame segment of the construction industry, operating in 43 states with 103 construction centers and eight manufacturing plants. Since its incep-

tion, the company has been at the forefront of innovation, allowing talented individuals to take risks and pursue ideas to enter new market segments and new geographic areas. The entrepreneurial spirit that shaped what Morton Buildings has become today is not a product of chance, but a result of a management style inspired by Mr. Getz's leadership. His leadership fostered a work environment where innovation was encouraged and rewarded.

CFTC and Kansas State University announce 2018 Agricultural Commodity Futures Conference

The Commodity Futures Trading Commission (CFTC) and the Center for Risk Management Educa-

tion and Research at Kansas State University will jointly host, "Protecting America's Agricultural

Markets: An Agricultural Commodity Futures Conference," on April 5 - 6, 2018, in Overland Park,

Kansas. This first-of-its-kind conference will include robust presentations and discussions on current macro-economic trends and issues affecting American agricultural futures markets and the importance of these markets for managing risk and protecting participants from manipulation, fraud and other unlawful activities.

"It is both fitting and appropriate to hold our first conference focused on derivatives-markets issues impacting the agricultural community in America's Heartland. I look forward to this opportunity to join our partner, Kansas State University, to learn more about these vitally important issues and listen to the concerns of this communi-

ty," said CFTC Chairman J. Christopher Giancarlo. "One of our main priorities at the CFTC is to ensure regulatory barriers do not stand in the way of long standing hedging practices of American farmers and ranchers, who depend on our markets."

"Kansas State University is pleased to partner with CFTC on this important and timely conference addressing issues affecting market performance, as well as the value of our commodity futures markets in managing risk," said John Floros, dean of the College of Agriculture and director of K-State Research and Extension. "This conference complements our land grant mission and Global Food Systems initiative by advancing knowledge discovery and dissemination to the agricultural community. The need to effectively manage risk in commodity markets has never been greater, and this conference provides a forum for

open dialogue about critical futures market issues." CFTC's Kansas City (Missouri) Office and Kansas State University's Center for Risk Management Education and Research are collaborating to bring together people across federal, state, and local governments, with voices from agribusiness and academia to discuss a range of topics of interests to the agricultural community, who use the markets, including the global markets' impact on agricultural futures markets; potential market manipulation; spoofing; the lack of convergence between cash and futures prices in certain markets; and other ways in which market participants and consumers can protect themselves against fraud and violations of the Commodity Exchange Act. A conference agenda with additional details and information about registration will be released in the near future.

Steel Buildings vs Pole Barns

Which Building System is Right for You?

- **Steel Buildings Can Be Clear Span Up to 300'** giving you an uninterrupted interior space
 - > Pole Barns feature interior columns throughout
- **Steel buildings are anchored into concrete piers or a concrete slab**
 - > Pole Barn poles are placed directly into the soil exposing the primary framing to rot and expansive soils
- **General Steel buildings come with a 50 year structural, 40 year paint and 20 year roof warranties**
 - > Pole Barns?

Steel Building Quick Facts:

- **Custom designed according to your unique needs**
 - > Hay & grain storage, livestock, tractor and combine garages, personal barns, riding arenas, you name it
- **Can cost up to 50% less***
 - > When compared to traditional construction
- **100% American Made, I-beam construction, 26 gauge sheeting**
- **All bolt together construction (all welding done at the factory)**
- **Framed openings are pre punched**
- **Steel prices are expected to rise next year, contact us today to lock your price**
 - > Lock your price now and deliver in the spring

The most recognized name in prefab metal building systems

General Steel discusses advantages of steel buildings

General Steel shares the following article on the advantages of steel buildings.

1. Steel is a Proven High Grade Material

Steel has been the preferred material for commercial buildings since the late 1800s, when its durability and safety were recognized as an upgrade to cast iron. According to the Steel Recycling Institute, steel is the leading framing material for buildings and infrastructure in North America, with nearly a 50% market share for non-residential and multi-story residential construction.

2. Fire Resistance

No building material is truly fireproof, meaning any building is vulnerable to a destructive blaze. But steel is fire resistant, which means a fire would spread at a slower rate through a steel building than a wood building such as a pole barn, for example. That extra time could be the difference between life and death. The relationship between steel and fire has been rigorously tested for decades, and those tests ensure steel structures are designed and constructed to the strictest standards.

Expert Insight: You can

save on insurance costs by choosing steel as a primary building material because of its fire resistance qualities.

3. Wind Resistance

Steel performs well under high winds due to its ductility, which is the ability to bend without breaking. Steel is able to absorb more energy than its less sturdy counterparts, meaning your facility is safe under the most extreme conditions.

Expert Advice: You may like the look or functionality of a canopy building but canopies cost much more than enclosed buildings because the

canopy structure must be engineered to withstand upward wind loads.

4. Strength-to-Weight Ratio

Steel has the highest strength-to-weight ratio of any material used in construction, according to the American Iron & Steel Institute. That means that steel components are stronger without adding much weight. The versatility of steel makes construction easier, and gives engineers and architects more flexibility to design a building to maximize its safety features.

Is All Steel Equal in Strength?

At first glance all steel buildings may appear to be the same but the reality is not all metal buildings are created equal and making the wrong decision on what you believe is made of durable materials can cost you in the long run.

5. Less Maintenance

This advantage of steel is usually seen as a way to save time and reduce the stress of maintaining a facility. But it also makes your facility safer. Every building has natural wear and tear, but a less durable building material such as wood, will deteriorate at a much faster

rate than steel. As a facility deteriorates, maintenance is less likely to keep pace, contributing to less structural integrity and increasing the chances of permanent and dangerous damage.

Did you know? If you have been wondering what type of ongoing maintenance metal buildings require, you may be pleased to hear little (like clearing snow) or no maintenance is required to keep your building in good condition.

6. Sustainability

Steel is the world's most recycled material with more than 80 million tons of steel recycled annually, and the steel industry is a leader in executing eco-friendly initiatives across the world. That's great for the environment, but it also contributes to the safety of the material. Steel is a unique material that can be recycled for a number of purposes without ever sacrificing its integrity, which contributes to the long lifespan of a steel building.

Advice for Your Search for a Reliable Metal Building

Steel is the most reliable long-term solution for building a safe facility, but there are other factors. Adhering to federal safety standards, designing a building to suit your geographical situation and choosing a reliable steel provider can significantly increase the chances of building a sound facility that you can feel secure in. An investment in a high-grade steel building is an investment in the future of your franchise, company or even your family.

AROUND KANSAS

Greg Rud is not a native Kansan but he has come to love his adopted state, and to capture its beauty with his photography.

When he moved from Minnesota, the land of a thousand lakes, he thought he couldn't possibly live somewhere without water! But there was a heck of a bargain on a house in Lucas. When he saw Wilson Lake, he knew it was meant to be.

Wilson Lake has inspired his "Splash Art," these incredible captures of the sunset illuminating splashes of water on the lake. And then there are the sunsets - the trademark sky-scape of western Kansas. A cousin of the famous outlaw, the Sundance Kid, Greg adopted the moniker of "Sunset Kid." His photos of sunsets are jaw-dropping.

His images have been featured on the Russell County visitors' guide several times and on the state brochure for the Post Rock Scenic Byway. He is the official photographer for the Denmark (Kansas) Preservation Foundation.

His Facebook site is Rural Routes by Greg Rud and I often share his images on the Around Kansas Facebook page. He has a 2018 calendar featuring his photos available now as well as a 64-page full color book with rural images of Lincoln and Russell Counties. Both can be had for around \$50.

The 55-year-old Navy veteran puts his heart and soul and ability into his work as evidenced by the following he has cultivated. Whether his cowboy-hatted silhouette in front of a lightning-streaked sky or the limestone ruin of

homes and barns, Greg captures what is dramatic, poignant, and what might otherwise go unnoticed.

Greg and I both agree that it sometimes takes "outsiders" to see our surroundings anew. He has found a home in an incredible landscape and a town that fosters creative pursuits.

All Around Kansas, we are proud to call you our friend and neighbor, Greg.

Deb Goodrich is the co-host of the Around Kansas TV show and the Garvey Historian in Residence at the Fort Wallace Museum. Contact her at author.debgoodrich@gmail.com.

Lawrence to host 25th Anniversary Old Fashioned Christmas Parade

On Saturday, December 2, the 25th Anniversary Lawrence Old Fashioned Christmas Parade will usher in the holiday season as festively decorated, authentic horse-drawn carriages make their way down Massachusetts Street. The parade begins at 11 a.m. and will feature different breeds of draft horses and many other horses of all sizes and colors.

The parade began in 1993 with 21 horse-drawn vehicles and grew to include as many as 85 entries, with some coming from as far as Texas, Minnesota, North Dakota, and Arizona, as well as from all over the state of Kansas. It now attracts upwards of 10,000 attendees that begin

gathering hours before the start time to get good seats and settle into their lawn chairs with blankets and hot cocoa to enjoy the event. For more information about the parade, including parking maps, visit www.lawrencechristmasparade.org.

GRASSLAND AUCTION

WABAUNSEE COUNTY, KANSAS

281 Acres Excellent Native Grass • Tract in 33-11-10

SATURDAY, DECEMBER 16, 2017 • 10:30 AM

Auction held at Alma Community Center — ALMA, KANSAS

AUCTIONEER'S NOTES: This is one of the cleanest pastures in Wabaunsee County and most evenly grazed. It is accessible via a registered easement on east side of the pasture at the north spur on Low Water North Road. The pasture features beautiful views from the tops of the ridges. It is watered by springs that line the draws and a terrific spring-fed pond running out the trickle tube even in this dry time. **A great opportunity to purchase a piece of the Flint Hills!**

TERMS: 10% earnest money the day of the auction with the remainder at closing on or before January 16, 2018. Title insurance and escrow fees to be shared equally. The sale is not contingent on financing and all inspections should be conducted prior to the auction at bidder's expense. Murray Auction and Realty is acting as an agent for the seller. All information obtained from sources deemed to be reliable but not guaranteed. Statements made day of auction take precedence over printed material.

SELLERS: MEYER/HARRISON/STONE

The Right Tool For The Job

Clark owned a small dairy farm in Delaware. Thinking to add to his larder, he bought a black steer at Dill's auction down the road to fatten a beef for the family.

He put the steer in a grazing pasture with the dairy heifers. In a short time he noticed that the steer was trying to breed the heifers! Not a good thing on a dairy farm. He

decided to take him back to the sale the next week; in the meantime he needed to separate him from the heifers.

His son Bob and he managed to drive him into an old laying hen house they were using for hay storage. Over the week the steer's attitude began to worsen. Finally the day came. They decided they would try to rope him and

move him into a box stall in order to load him on a cattle truck.

Then the chaos began. The steer was bawling the walls, jumpin' the hay bales and charging anything that moved! Thinking clearly, Clark mounted the old tractor and parked it by the chicken house door. The right tool for the job, I say. Then he took his gun from the pickup and placed himself in front of the door.

His plan was to have Bob open the stall, the steer would run to the door and Clark would euthanize the steer humanely as he passed through at 35 hooves per hour. Hmm...?

Bob opened the stall and ran for cover. The

steer took one look at the tractor, then turned and dove under the chicken roosts! He was just tall enough to pop the 1x4's and 1x6's which were the frame of the platform. He ran the length of it, nails and pieces of board went flying! Next he jumped on the bales, stumbled and crashed through the back door on the other side of the shed, where Clark was not.

This was the year that they had pulled up all the old barbed wire fence from the Revolutionary War period. They had replaced it with little electric fences suitable for domesticated heifers. The crazed steer set about tearing the electric fence, t-posts, insulators and wire gates to piec-

es! His demolition included the pastures wherein the heifers abided. He finally calmed down, found the heifers and went back to sniffing and grazing.

Exhausted, they called the cowboy in the neighborhood who came and roped him. The sale barn's portable loading chute was summoned to take him back to the sale.

Well, the story got out. Next day Clark's neighbor cited a coincidence, "Black steer, huh. I sent a black steer to the sale two weeks ago. I'd banded him but I missed one of his test-tickles and pretty soon he was trying to breed all the dairy heifers on my place!"
