### K-State farm management economist tracks fuel price trends

By Shelby Varner, K-State Research and Extension news

Kansas State University farm management economist Gregg Ibendahl said the average price of gasoline and diesel the past five years gives a good indication of when to expect higher and lower prices.

"You can really see the seasonality the most if you look at (past) gasoline prices." Ibendahl said.

He said gas prices are almost guaranteed to be higher during summer when people are going on vacations. On the other hand, the lowest gasoline prices will be during the

**Toll-Free** 

According

Ibendahl, that trend still holds and will likely continue. "On the diesel

side, we also see

some seasonality,'

Ibendahl said. The seasonality of diesel has changed over the last decade or two because diesel used to be a close

sel prices to be highest in the winter. In a recent analysis, Ibendahl said the best time to buy die-

substitute for heating

oil, which caused die-

sel would probably be during the sum-"(Now) we see

more of a seasonal demand for diesel fuel in the spring and

fall," Ibendahl said. "Prices are probably 15-20 cents higher in October and November, but the rest of the year it is probably just a little bit below average."

Higher diesel prices during those times can be a bad thing for farmers as they are trying to get the crop in or out.

"Diesel doesn't show strong seasonality like gasoline does, but it's still there." Ibendahl said.

Ibendahl said cur-

rent events - such as the armed conflict between Russia and Ukraine – could push diesel and oil prices higher and result in even more price variability.

\$150-\$450.00

We had a lighter run of cattle and a good attendance of local and out of state buyers for our sale held on Friday, February 18th. Many cattle offered were in good condition and were selling at steady to \$5 higher on the 775 lbs. cattle and down. Heavier steers were steady to \$2 lower. Cull cows sold at steady to strong prices.

Grass & Grain, February 22, 2022

## Kansas Hay Market Report

Compared to the last report, hay market prices for the week ending February 5 remained mostly steady for alfalfa and grass hay; movement remains slow. Although there are some folks that are still trying to peddle hay, there have not been too many takers. In a "normal" year, we would see a decline in price but have not seen that yet. Worries of the current drought are keeping prices firm. According to the U.S. Drought Monitor for the week of February 8th, Nebraska and Kansas saw a broad expansion of moderate drought (D1) and abnormal dryness (D0). The 30-to-90-day precipitation totals rank in the top five driest on record. Fires on the rise in these areas and burn bans are going into effect. Currently, abnormally dry conditions (D0) decreased to 16%, moderate drought (D1) increased to 53%, severe drought (D2) increased to 11% and extreme drought (D3) remained near 6%. If you have any extra hay to sell and/or need hay here in Kansas, use the services of the Internet Hay Exchange: www. havexchange.com/ks.php.

\*\* Prices below reflect the average price. There could be prices higher and lower than those published.

### Southwest Kansas

## American lamb industry evaluates

The American Lamb Board (ALB) is working with Michigan State University (MSU) to evaluate the environmental footprint of the U.S. sheep industry in order to have accurate and robust data to contribute to this important issue. The initial focus of the study defines a comprehensive model of greenhouse gas (GHG) emissions for the diverse array of U.S. sheep production systems such as range, farm flock, pasture, intensive and feedlot. MSU will conduct a partial life cycle analysis of lamb production in these types of operations to quantify GHG

"It is extremely important for our industry to identify and evaluate our role in GHG emissions," said ALB chairman Peter Comino, Buffalo, Wyo. "Accurate data is the basis for improvement strategies and providing factual information to consumers and the media."

At the recent American Sheep Industry Convention, Dr. Richard Ehrhardt provided an informative presentation updating the industry of the progress of the study. MSU has collected the data and will now work on defining environmental improvement strategies that are the most feasible and impactful for sheep producers to implement according to their particular production system. A blueprint for producer education strategies to address these priorities will wrap up the project. For a copy of Dr. Ehrhardt's presentation email rae@americanlamb.

emissions.

Environmental concerns about livestock production have gained traction and the American lamb industry entered the spotlight when a 2011 Environmental Working Group Study characterized lamb as one of the largest contributors of GHG emissions. The study's outcomes are still cited at influential conferences and

## **KSU Cattlemen's Day** scheduled for March

Cattlemen's Day 2022 on Friday, March 4 at Weber Hall in Manhattan. A highlight of this year's event will be beef cattle research project updates by K-State ASI faculty. ASI faculty speakers will include: K.C. Olson, cow-calf and range management;

Dale Blasi, stocker, growing, and backgrounding; Jim Drouillard, feedlot and ruminant nutrition; and Michael Chao, meat science and muscle biology.

The program begins at 9:30 a.m. Following the K-State beef research update, Glynn Tonsor, K-State ag economics professor, will give a beef industry economic

We're excited to be back in person to host the 109th KSU Cattlemen's Day," says A.J. Tarpoff, K-State associate professor and Cattlemen's Day co-chairman. "Our annual program strives to address key issues and to provide current information that keeps our industry efficient and relevant. For many attendees, this may be their first time back to campus in over a year, so we wanted to ensure that this year's lineup will be well worth their trip.

The day starts at 8 a.m. with refreshments, educational exhibits and a commercial trade show. Tarpoff adds, "This year we have numerous participants signed up for our allied industry trade show. Hosted on the floor in Weber Arena, the trade show provides a forum for the attendees to observe what's new in the beef industry and network with key industry leaders.'

Lunch will be smoked brisket sponsored by U.S. Premium Beef and trade show exhibitors. Cajun-spiced catfish will also be available. The afternoon sessions will feature K-State faculty and industry presentations in Weber Hall 123, 146 and 111 discussing an array of topics, including:

What's Up with the Weather — Jeff Basara, University of Oklahoma School of Meteorology professor, will discuss weather extremes and outlook.

Rules of the Road for Kansas Farmers and Ranchers — Kansas Highway Patrol will give an overview of ways to utilize the road.

Reproductive Research Updates, All Things Reproduction Question-and-Answer Session — Sandy Johnson, KSU ASI Extension beef specialist, and David Grieger, KSU ASI professor, will outline advancements made in terms of reproductive research followed by an interactive discussion session focused on beef cattle repro-

Meat Alternatives, Taste Testing and Consumer Acceptance — Lane Eggers, KSU ASI Extension associate and graduate student, will discuss meat alternatives and their acceptance.E

The cost to attend Cattlemen's Day 2022 is \$25 if paid by February 25 or \$35 at the door. There is no charge for students who pre-register. For more information and online registration, visit KSUBeef.org or contact Lois Schreiner at 785-532-1267 or lschrein@ksu edu

The 45th Annual Legacy Bull and Female Sale will begin at 4 p.m. at the Stanley Stout Center (2200 Denison Ave). Visit asi.ksu.edu/legacysale to learn more about this year's offering and to request a sale catalog.

On March 3, the evening before Cattlemen's Day, Pat Koons will be honored as the Stockman of the Year at the Annual Stockmen's Dinner at 6 p.m. at the Stanley Stout Center. A separate registration is required for the dinner. Information can be found online at //asi.ksu.edu/stockmensdinner.

# 'Bringing the farm to school' producer training focuses on increasing local food sales

Farmers, ranchers and local food processors can learn strategies for growing and selling their products to school districts at the Bringing the Farm to School: Local Producer Training March 3 in Omaha hosted by the Nebraska Department of Education.

When area farmers sell their products to schools, everyone wins, said Sarah Smith, Farm to School Coordinator for the Nebraska Department of Education.

'Farmers have a reliable market, dollars get recirculated in the community, and, most importantly, students get to enjoy local, fresh, nutritious, and delicious food," Smith said.

The training will be held at the Douglas-Sarpy Counties Extension Office on March 3, from 9 a.m. to 5 p.m. To register, visit www.education.ne.gov/ ns/farm-to-school/ or contact Sarah Smith, Farm to School Specialist at the Nebraska Department of Education, 402-525-3128 or sarah.e.smith@nebraska.

Producers that attend this training will:

Learn about accessing school markets and growing products for schools;

Hear from producers that have successfully navigated school markets:

Gain new knowledge and resources for integrating school markets into a business plan:

Meet local peers and experts, and participate in a question-answer session.

Schools offer a strong market opportunity for local producers. More than 30 million students enjoy meals at school through the National School Lunch Program each day, and according to a USDA Farm to School Census, schools across the country purchased more than \$789 million in local foods during the 2013-2014 school year - a total that has continued to increase. At the state level, 553 Nebraska schools serving 235,367 students participate in Farm to School efforts. Farm to School is gaining momentum in Nebraska with more schools and produc-

The development of this training was funded at least in part with federal funds from the U.S. Department of Agriculture, Food and Nutrition Service through an agreement with the National Center for Appropriate Technolo-

ers partnering every year.

gy in partnership with the National Farm to School Network.

## **Design and Grow Gardening** Workshop planned March 5

Plan now to attend the 2022 Design & Grow Gardening Workshop, scheduled for Saturday, March 5th, 2022, from 9:00 a.m.-12:00 p.m. The workshop will provide ideas and information for beginning and seasoned gardeners alike. Attendees will have the opportunity to learn, collect new ideas, and find inspiration for both the garden and landscape.

This year's event will offer limited (and socially distant) seating for those who would like to attend in person, and also a virtual option for those who prefer to attend from home via Zoom. Zoom links and handouts will be emailed Zoom participants prior to the workshop. For in-person attendees, the event will be hosted at:

Sedgwick County Extension Education Center, 4-H Hall

7001 W. 21st Street North, Wichita, KS 67205 (21st & Ridge Road)

The Design & Grow Gardening Workshop will include the following topics/ presentations:

• Bug-O-Mania: Get to Know the Good and Bad "Bugs" in the Landscape - Learn about the major beneficial insects commonly found in the landscape. Dr. Raymond Cloyd, KSU Horticulture Entomology/ Plant Protection Specialist, will also share how to distinguish them from the top ten garden insect/mite pests that you may want to

manage. · Gardening the Naturalistic Way – Explore this trending gardening style with Extension Master Gardener Laura Knight, and discover how native non-native plants can increase biodiversity, provide better habitat for fauna, and increase yearround interest in our gar-

• Ten Critical Steps for Growing Healthy Trees and Shrubs - Learn about the important steps to fol-

low for growing healthier trees & shrubs in your landscape, in order to improve plant growth. Matthew McKernan, Horticulture Extension agent, will share tips for planting and caring for your trees and

The cost to attend, either in person or virtually, is \$5.00 per person until February 25th. After that date, the cost will be \$10 per person. Registration will close on Thursday, March 3rd.

Seating is limited, so register early at: https:// tinyurl.com/designandgrow2022

### Tractor safety class offered by Central Kansas Extension District and Minneapolis High School hosting a tractor safety class

This summer thousands of Kansas teenagers will begin their first job working for a farmer or rancher. For those that are ages 14 or 15, they must complete a tractor safety course in order to

be legally employed. To help prepare some of those youth for the upcoming work season, the Central Kansas Extension District (CKD) and Minneapolis High School FFA will be

tions Order for Agriculture (HOOA). The course will be held

to meet the requirements

of the U.S. Department of

Labor's Hazardous Occupa-

on Saturday, March 5th at 9:00 a.m. at the Great Plains Conference Center in Salina. The cost of the program is \$15.00. Lunch provided. Those wanting to enroll should visit www.centralkansas.ksu.edu for more information and registration. Enrollment is due by Tuesday, March 1st.

If you have any questions about the course or registration process, feel free to contact Justine Henderson (jwh04@ksu.edu or phone 785-392-2147), Cade Rensink (crensink@ksu.edu or phone 785-309-5850), or Jay Wisbey (jwisbey@ksu.edu or phone 785-309-5850).

### K-State entomologist urges growers to be on lookout for insect pest trio

**By Pat Melgares** 

A trio of pests could make early spring difficult for wheat and alfalfa growers in Kansas.

But until wheat begins to break its winter dormancy, Kansas State University crop entomologist Jeff Whitworth said there's not much that farmers can do about army cutworms, winter grain mites and the Hessian fly.

They're not going to cause a problem when the wheat or alfalfa is in dormancy," Whitworth said. "Once the crop starts to grow, that's when you need to get out and start looking.'

Army cutworms last caused big problems in Kansas wheat and alfalfa fields in 2018 and 2019. The insect carries a very important distinction from armyworms and fall armyworms, two pests that created headaches for many growers last fall.

"The army cutworm will over-winter as a worm," Whitworth said. "So, they're out there feeding on wheat and alfalfa anytime the temperature gets above 55 degrees Fahrenheit.

"Right now, that really doesn't matter because the crops are dormant. But when it warms up, and the crops break dormancy, that's when you'll notice the army cutworms feeding. If you had army cutworms last year, they're still going to be there in the spring."

An indication of army cutworms in the field: If birds are hovering and looking for meals, there's a good chance the army cutworm is their target.

"It won't be the fall armyworms; they don't come back into Kansas until mid-July," Whitworth said. "If you have feeding early on, it's army cutworms, and they are there as a result of the moth flying around last fall depositing

Winter grain mites often capitalize on dry conditions in wheat fields. As their name suggests, the little critters are most active in cold weather - typically 30-50 degrees, according to Whitworth.

"Generally, if we have good growing conditions, the wheat has no problem out-growing a hefty winter grain mite infestation," he said. "But if the wheat is struggling from a lack of moisture and you have winter grain mites sucking the juice out of each cell, that can really add to the stress of the wheat plant."

A good rain is the best protection for wheat and alfalfa from winter grain mites. Whitworth, with more than four decades of experience, says he rarely recommends

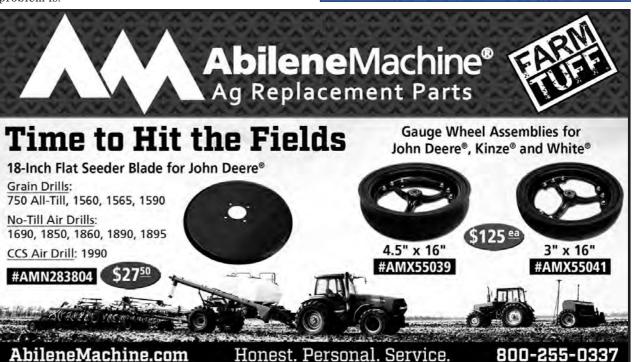

treating for mites with insecticides "because usually we get rain in some form or fashion."

The Hessian fly - a dark-colored insect about oneeighth inch long - prefers wheat as a winter home, but it is in the spring that its damage becomes most apparent. Females lay eggs in the fall and the larvae gradually build a protective capsule often referred to as a flaxseed.

"What I'm recommending right now is to wait until... plants start breaking dormancy," Whitworth said. "If any place in the field seems to be going backwards -- as the growers like to say, or it's not keeping up with the rest of the field - then check that area to determine what the problem is.'

Growers can contact their local Extension office for assistance in identifying insect pests in their fields. A weekly update on Kansas crops also is available in the K-State Department of Agronomy online newsletter, called the eUpdate.

### Keller Brothers Harvesting inducted into U.S. Custom Harvesters Hall of Fame

U.S. Custom Harvesters (USCHI) hosted their 38th annual convention January 27-29 at the Amarillo Civic Center in Amarillo, Texas. This year's annual convention saw a record-breaking auction and attendance. The awards banquet honored scholarship recipients, Hall of Fame inductees, and new Board of Directors members. Among this year's Hall of Fame inductees were Ray and Max Keller of Keller Brothers Harvesting, Hunter.

The U.S. Custom Harvesters Hall of Fame is the only nationwide honorarium in the United States which recognizes the top harvesters for their lifetime achievements and support of the business,

without regard to affiliation with commodity groups, membership organizations or industry sector. The Hall of Fame was founded in 1998 by the Board of Directors, who solicit nominations and oversee the selection committee, which reviews those nominations and names new inductees annually. Custom Harvesters whose lifetime accomplishments are noteworthy for their contributions to the harvesting industry or to the health of its rural communities which are dependent upon vital harvesting industry are eligible. Letters of recommendation were gathered from family, friends, employees, and customers. Ray and Max Keller are third-generation custom harvesters. Harvesting runs deep in the blood of the Keller family. Somewithin the family has been harvesting for a total of 70 years. Ray and Max's grandfather, John Keller, began Keller Harvesting with his brothers. Eventually, John's eldest sons, Harold (Ham) Keller, Leonard Keller, and Richard Keller took over the business and continued custom harvesting before their own retirement. In 1979, Harold's sons, Ray and Max purchased their first Massey combine and thus began the 40-year adventure.

For a majority of these years, Ray and Max's harvesting routes typically ran from Seymour, Texas

Max and Ray Keller of Keller Brothers Harvesting were recently inducted into the U.S. Custom Harvesters Hall of Fame.

through Oklahoma and southern Kansas clear up to Presho, South Dakota, one year even going as far north as Montana. Though times and farming have changed, one thing has always been consistent in the Keller family: equipment was (and is) to be red, and only red. Massey-Har-Massey-Ferguson, and Case-IH were the

three children: a daughter, Lacey and twin sons, Lee and Levi. Max and his wife Kally have two children: a daughter, Morgan and a son, Mitchell. Each of the boys became an integral part of the harvest crew at some point during their junior high, high school, and college years.

From the very first run with a Massey-Ferguson 750 to their last run with two Case-IH 7140s, after 40 years, Ray and Max have decided it is time to retire from custom harvesting and devote their time to their farm in Hunter, as well as traveling to visit their grown children. There is no larger, more meaningful honor than this induction into the USCHI Hall of Fame to serve as the capstone to an incredibly outstanding career for these two men. Congratulations to Keller Brothers Harvesting.

## Three facts about wintertime equine nutrition

stout yet entirely fragile, horses require a great level of care, especially as it relates to their nutrition over the winter.

"Many horse owners may not realize they actually need to feed horses differently in the wintertime than they do in the summertime," Jayme Nichols, PhD, director of nutrition at Stride Animal Health, shared in an interview with Valley Vet Supply.

For a better understanding, continue learning with these three facts.

Fact 1: a horse's "thermoneutral zone" directly impacts their nutritional

"The first thing that I think is important for everybody to understand is a term that sounds a little bit intimidating — thermoneutral zone," Dr. Nichols said. "This is basically the temperature outside in which a horse can maintain their own core body temperature without having to exert any extra effort to regulate either their heat loss or heat gain.'

Horses in the United States have an average thermoneutral zone between 40 and 80 degrees. which means horses near the low end of their thermoneutral zone will have to use extra energy (thus calories) to maintain heat.

identify whether your horse is outside of their thermoneutral zone, "You want to pay attention to whether or not they're using any natural defenses to that cold weather," encourages Brittany Rahm, nutrition consultant at Stride Animal Health.

These natural defenses can include:

Shivering

Standing with tail to the wind, head lowered Seeking shelter

Dr. Nichols followed up with, "Anytime you combine cold temperatures on top of moisture - wind, ice and of course snow - a horse will have to increase their heat production and will need to consume more Additionally, young horses or underweight horses are going to

hit that lower, critical temperature and get colder faster than a mature horse or a horse that's going into wintertime with really good body condition," Dr. Nichols said.

An especially important detail for those traveling for competitions or pleasure with their horses is that it takes two weeks to a full month for horses to readapt to a new ambient

temperature. "When traveling, be mindful if you're going a long distance or to a region that has a very different temperature range than what you're coming from - your horse may struggle a little bit more to retain heat or try to get rid of it depending whether you're going to a colder climate or a hotter climate," said Dr. Nichols.

Fact 2: a horse's feed sources will help them maintain warmth, in addition to weight.

It's important to understand "metabolic heat production" as it relates to increasing a horse's feed during cold temperatures.

Dr. Nichols explained, saying, "Think of a horse's digestive system, or their hind gut, as a furnace. The more the microbes in the horse's hind gut are able to digest and ferment - especially fibers - the more heat that can be generated for that horse. That's part of what goes into keeping them warm."

Fact 3: as weather changes, so should a horse's diet, but not in the way some may think.

"A lot of times, people can get hung up thinking, 'I need to change up (my horse's) grain, or I need to change how much grain I feed," Dr. Nichols said. However, is either necessary? Not exactly, but there are some other aspects for horse owners to consider.

While a well-meaning sentiment, increasing grain can be harmful to a horse's health - heightening colic risk and more – and secondly, doing so may not be enough to help a horse maintain their warmth when they need it most.

"Increasing the amount of hay is the best way to increase heat production and keep a horse warm during winter," Dr. Nichols said. "Horses will naturally increase the amount of hav that they eat, based on the temperatures dropping.'

Regarding how much more hay to provide - remember that the average thermoneutral zone for horses in the U.S. is between 40 and 80 degrees. Dr. Nichols said, as a general rule of thumb, for every one degree Fahrenheit below the lower range of 40 degrees, horses will need an extra 200 calories.

"So, to put that in perspective, your average hav is going to have between 800 to 1,000 calories per pound. Let's say you've got a 10-degree drop - you're going to need an extra 2,000 calories. All I did there was just take that 10 degrees times 200 calories, and that gets me to 2,000 calories, which is roughly two to three lbs. extra hay per day. So, if you're feeding small square bales of grass hay, that's probably going to be an extra flake, maybe an extra two flakes.'

Horse owners will need to increase their horse's hay intake, but what about their grain? When the temperatures drop, upping feed is a common practice (but not recommended). Dr. Nichols shared two specific horse health examples, should horses be fed either a fortified feed or cereal grains, such as whole corn and oats.

Example 1, fortified feed increase - say horsemen are feeding a fortified grain at a recommended level of four lbs. per day, then increase by one lb. per day. That feed is designed to meet all vitamin mineral requirements. amino acid requirements, etc., at four lbs. per day. While that extra pound may not be more harmful, it will provide some extra calories but the calories will be more quickly digested. This means the increased grain does not provide horses with longterm heat production, like hay does.

Example 2, cereal grain increase - say horsemen are feeding a whole corn/ oat mix at four lbs. per day and decide to double it. Corn and oats are really high in starches and sugars, which puts a really heavy load of sugar on the digestive tract that the small intestine can't digest very well, very quickly. You can then have an overspill of starch into the hind gut of the horse, impacting the balance of the good bacteria in that gut and presenting colic issues; it can also cause founder or laminitis issues in some horses.

"You want to keep your grain level the same. If you're going to up anything, the most important thing to do is up that hay and consider a supplement that will keep them

drinking, like Turbo Mag BCAA," Rahm said.

For senior horses or horses with poor dental conditions, both Rahm and Dr. Nichols recommend feeding forage pellets, such as Timothy or alfalfa hay pellets, or even beet pulp shreds, which all have similar benefits as long-stem hay forage.

"For horses who are underweight, it is important to try to improve their body condition, which will support their thermoregulation and overall health. In addition to increasing their total hay intake, we recommend adding a high-quality protein and energy supplement to help support healthy weight gain," said Tony Hawkins, DVM, technical service veterinarian at Valley Vet Supply.

Bundle up, stay safe, and keep in mind these three facts to help your horse weather the winter.

## Wheat Rx Seminars focus on improving wheat yield, protein quality and producer profitability

It's a well-known fact that wheat yield and protein have an inverse relationship - the higher the yield, the lower the protein content. But, what if you could have high yields and high protein quality,

Kansas Wheat Rx is a prescription for economical and sustainable production of high-yielding and high-quality wheat. Inaugural seminars in Wichita and Hays on February 8-9, 2022, focused on management practices to maximize yield and quality.

About 150 wheat farmers attended these sem-

cus, KS off of Rd 240/Locust St

**CHUCK MAGGARD** 

**RICK GRIFFIN** 

Associate Broker/

searchers at Kansas State University, as well as how to capture value from high-quality wheat from Grain Craft.

Reuben McLean and E.G. Herl, representing Grain Craft, gave an overview of the company, including the Grain Craft Innovation and Quality Lab which is now located in the Kansas Wheat Innovation Center, and their Preferred Variety Program.

When it comes to protein, quantity isn't always as important as quality. While protein content often changes with new crop wheat, McLean said

Office: 305 Broadway, Cottonwood Falls, KS

Phone: 620-273-6421 Fax: 620-273-6425

consistency in the flour they purchase. Over the past several years, Grain Craft has been bringing in spring wheat from the Northern Plains to increase the protein quality of the flour they mill. Ideally, they would be able to source wheat that meets their customer needs locally. But in a year like 2021, with low protein content in Kansas, they have to blend it with higher protein spring wheat. When

Over the past decade, consumers are looking for

share.

they must bring in hard

red spring wheat, that sub-

tracts from Kansas' market

so bakeries are trying to phase out the use of dough additives. The inherent properties of the wheat itself must produce a more consistent product.

Grain Craft said baking quality is very critical and asked, "What can be done on your farms to maximize vield and profitability but also make excellent baking quality?"

"Upstream Through Innovation," Grain Craft is working closely with breeding programs and farmers to deliver the quality and consistency their customers desire. Grain Craft's preferred variety list allows them to

panies and wheat producers those varieties that meet their end-product quality needs, even during vears that may have significant environmental effects. They recognize that 70-80% of wheat is based on environment and management, but the preferred variety program is trying to have a positive effect on 20-30% that is based on genetics. Grain Craft is currently offering a 25 cent premium for these varieties grown with Certified Seed. The Grain Craft preferred variety program is available at graincraft.

com/preferred-varieties. "Our hope with Wheat Rx and the research that Romulo is doing is to take marginal varieties and be able to add an Rx or a prescription of how to manage those varieties to maximize quality," Mc-Lean said.

At the Wheat Rx seminars, K-State researchers presented timely recommendations for variety selection and management practices that help improve these inherent properties of wheat.

K-State wheat breeder Allan Fritz said his team is working to increase the protein or functionality in the current wheat gene pool and to find new genes.

He and Dr. Mary Guttieri, USDA-ARS in Manhattan, are doing experiments with wild wheat relatives, especially wild emmer wheat. Wild relatives make good parents and can be crossed to wheat. Some of these lines have proteins that are 2.5 to three points above the mean.

Dr. Kelsey Andersen Onofre, K-State plant pathologist, said that in 2021. an estimated 14.4% of Kansas wheat yield was lost to diseases. Stripe rust caused the most loss. She said her research shows an average of 7.8% yield increase with fungicide treatments, emphasizing that there are a lot of products available for fungal diseases, and a lot of them work really well.

"It's not about finding the right product, as much as getting the product on the plant at the right time," she said. She recommends applying a fungicide at full flag leaf extension to maximize vield.

Dr. Dorivar Ruiz Diaz, K-State professor of agronomy, said research shows yield increases with nitrogen applications. Late application of nitrogen with fungicide applications has a positive effect on grain protein. In addition, sulfur application may show significant yield increase in some conditions. He emphasized the need to soil test every two to four vears. Even with high input prices right now, there are opportunities for higher yields and higher protein to improve producers' return on investment.

Dr. Romulo Lollato, K-State Extension Wheat and Forages specialist, shared the results of a grower survey of management practices on wheat vield. This research shows that managing fertility and applying fungicides can maximize both wheat yield and protein quality.

The results of these research projects are available to farmers at kswheat. com/wheatrx. More Wheat Rx seminars will be scheduled in future months.

With proper management of wheat, farmers will be able to maximize their profitability, and, at the same time, produce the quality that customers require for their end prod-

## Watch for navel and joint ill in newborn calves

By Lisa Moser

The smell of rubbing alcohol in a physician's office is a sign of a hygienic environment. Just as medical personnel work to maintain a sanitary exam room for their patients, those cleanliness principles also apply on the farm, said Kansas State University Beef Cattle Institute veterinarian Brian Lubbers on a recent Cattle Chat podcast.

"When calves are born in an environment that is dirty, it can lead to the development of navel ill and

joint ill, which are bacterial infections," Lubbers said.

He added that navel ill happens when the bacteria enter the calf's body through the navel, which was recently detached from the dam's placen ta; joint ill occurs in the bloodstream and can afflict the calf in one or many joints in its body.

"Signs of navel ill include an abscess on the outside of the body at the navel, but also it can be internal if the bacteria traveled up the vein from the navel to the liver," Lubbers said. "With joint ill, the calves have swollen joints that are warm to the touch and (the calf) can appear lame because it is painful for them to walk."

Lubbers said navel ill typically appears within the first one to two days of life, and the timing of joint ill symptoms appear within the first one to two weeks. Once the navel closes and the umbilical cord drops away from the body, the calf is no longer at risk of bacteria entering through that opening.

"If a producer suspects navel ill or joint ill happening in the calves, they should consult a veterinarian to see if the best treatment option is to drain the abscess or treat the calf with antibiotics," Lubbers said.

He said management practices should be evaluated in herds where many calves are experiencing these illnesses.

"If producers are seeing a lot of calves with navel and joint ill, it is often happening because the calves are being exposed to the same bacteria in a dirty environment," Lubbers said. "If cows calve in the same stall, make sure the bedding is changed out with each birth."

To hear the full discussion, listen to the Cattle Chat podcast online.

## Schwieterman Market Outlook

A marketing commentary by Bret Crotts

We had another wild week in the marketplace. The never-ending seesaw of news from Russia and Ukraine caused daily gyrations and it doesn't seem that anyone knows anything more than they did a week ago. With the three-day weekend, there is even more time for news to develop, or not develop, so we have the potential for a very chaotic Monday night/Tuesday trade.

On the charts, the March corn was unable to make new contract highs, but the December contract was. However, the December corn still can't break through the round

number resistance at \$6.00 after multiple attempts. It doesn't always happen, but the gains in the new crop could accelerate if we ever crack \$6.00.

The situation in Russia will play a huge role, but if not for that, it seems inevitable that the May and July corn will make new contract highs. Demand is good enough, and USDA has lowballed the export estimate, so the March and April supply and demand numbers are likely to be supportive. Demand is key right now and at the moment it is good enough to keep the market moving

The Kansas City wheat charts are looking good. Tuesday the July KW found support at the 50day moving average and made a strong bounce off that level. Friday, the market made a new high for the month and took out the January high. Profit taking set in after a test of the December high of \$8.54 3/4. The July KW is set for a run at the contract highs, but how soon that happens will be determined by what goes on in Russia and by export demand. Our export sales have been terrible the past three weeks, so an improvement on that front would be a big help

mentals of the soybean market seem to be improving drastically. The S. American production estimates are still shrinking and our export sales pace is outstanding. It is almost a certainty that USDA will have to increase the export estimate and cut ending stocks in the March supply and demand report. New contract highs are inevitable for the beans, the meal, and the oil. Cash cattle improved a bit more last week, with lots of trade at the \$142 - \$143 level. Steady improvement would be ideal and would give us new contract highs in the futures very soon. A close below \$145 in the April live cattle would not look good, so be aware of

to the bulls.

Like the other markets,

the July soybeans had a

nice rebound from early

week losses. The funda-

that going forward. The feeder cattle market did not do all that well spent most of the week moving sideways to lower, which did not bode well for the March futures, but worked out really well for the bear spreaders. March has a tendency to be the weak link, and it is proving to be again this year. Plan

on a bit more weakness

in the feeders unless we

see pressure in the corn

market.

## last week. The cash index perienced user of the futures Proposed changes to Packers & Stockyards Act could harm industry sustainability efforts

The North American Meat Institute (NAMI) recently said the Biden administration's proposed rules for the Packers and Stockyards Act could limit the abilities of the meat and poultry industry to respond to consumer demand regarding sustainability

"In the case of beef, farmers and ranchers produce cattle using 33 percent less land, 12 percent less water, and with a 16 percent smaller carbon footprint in 2007 compared to 1977. That is an astounding sustainability success story," said Julie Anna Potts, president and CEO of the Meat Institute. "The U.S. meat industry cannot continue to build on this remarkable sustainable productivity growth and meet consumer expectations if the government restricts interactions between packers and producers. Government intervention could jeopardize the gains made to date as well as the industry's ability to provide the products customers demand in the

future. The Meat Institute submitted written testimony for a hearing of the House Committee on Agriculture called, "Sustainability in the Livestock Sector: Environmental Gain and Eco-

nomic Viability." **Productivity in** 

Sustainable Beef The U.S. Department of Agriculture has announced plans to propose new rules under the Packers and Stockyards Act to

between packers and producers. By design, the proposed rules will discourage the use of alternative marketing arrangements (AMAs) – the very tools that have improved efficiency, productivity, and risk management over the past two decades and allowed the sector to meet consumer expectations for increased beef quality.

As multiple agricultural economists and cattle producers have explained, AMAs increase market efficiency by transmitting market signals about consumers' preferences to producers. The remarkable improvement in beef

quality demonstrates this. U.S. Beef Quality Grade

Today, consumers demand increased environmental sustainability, and AMAs are essential to providing support for undertaking innovative sus-tainability practices and improving efficiency.

In a 2021 online survey of over 1,000 consumers, 72 percent of consumers said "sustainability was a very or somewhat important purchase consideration,' and 68 percent said they were "willing to pay more for sustainable products.

Recognizing this strong consumer preference, in July 2021, the Meat Institute and 11 other organizations representing farmers and companies who produce the vast maiority of America's meat. poultry, and dairy products, and animal feed and ingredients, unveiled the Protein PACT for the Peoregulate the interactions ple, Animals, and Climate

of Tomorrow. The Protein PACT is the first joint initiative of its kind designed to verify progress toward global sustainable development goals across all animal protein sectors to ensure consumers can trust that meat aligns with their sustainability expectations. In addition, the Meat Institute is a member of the U.S. Roundtable for Sustainable Beef (USRSB), partnering with beef producers and others in the supply chain to advance beef sustainability through overarching and sector specific metrics and goals, and USRSB is a Protein PACT partner,

sector. Through Protein PACT, Meat Institute members have developed robust

joining our effort to share

our progress in the beef

metrics for continuous improvement and have publicly committed to sustain healthy animals, thriving workers and communities, safe food, balanced diets, and the environment.

To encourage full participation by companies of all sizes, the Meat Institute has established a broad range of measurable indicators within each focus area. These indicators allow companies to demonstrate continuous improvement at every stage of their sustainability efforts, transparently demonstrating compli-ance and measuring progress in setting, tracking and delivering on ambitious public commitments.

"Our benchmarks are designed to complement and strengthen efforts by farmers and livestock producers, and also bridge to actions in grocery stores, restaurants and homes all of which are needed to

100 Ang NI B.V. A.I. genetics for 30 years ...

truly achieve our common goals for the people, animals and climate of tomorrow," said Potts.
