Kansas Hay Market Report

For the week ending April 30, compared to the last report, overall alfalfa hay and grass hay were mostly steady while movement remains slow to moderate. Although summer is only a month away, producers are seeing late freezing temperatures and low rainfall delaying the first alfalfa cutting. New crop prices are still few and far between across the state due concerns about the ongoing drought increased input and costs. According to the U.S. Drought Monitor for April 26, abnormally dry conditions (D0) increased to near 11%, moderate drought (D1) decreased to 13%, severe drought (D2) remained near 35.5%, extreme drought (D3) increased to 17%, and exceptional drought (D4) remained at 2%. If you have any extra hay to sell and/ or need hay here in Kansas use the services of the Internet Hay Exchange: www.hayexchange.com/ ks.php.

**Prices below reflect the average price. There could be prices higher and lower than those published.

Southwest Kansas

Dairy alfalfa, ground and delivered, grinding alfalfa steady, movement slow to moderate. Alfalfa: horse, premium small squares 260.00-270.00. ready for grass.

Page 14 Grass & Grain, May 10, 2022 calls for prioritizing U.S. red meat in IPEF SMEF

The Office of the U.S. Trade Representative is preparing for a new round of Asia-Pacific trade talks under a plan known as the Indo-Pacific Economic Framework. The U.S. Meat Export Federation recently submitted comments on the IPEF, focusing on priorities for U.S. red meat access including promotion of science-based trade rules, promoting a systems-based approach to U.S. establishment approvals, eliminating burdensome registration requirements and advancement of regionalization agreements related to foreign animal diseases.

While there's not a lot of clear details about what the economic framework

Wilson Realty & Auction Service

will entail, USMEF assistant vice president of export services Travis Arp says it's an opportunity to work with countries across the Asia Pacific region to address various issues related to market access and barriers to trade and help open these markets to U.S. exporters.

"Looking at issues like science-based trade, good regulatory practices and transparency with regulations and things that can really open more opportunities for U.S. exporters in a multiple group of sectors," Arp says.

Even though barriers related to tariffs, quotas and import licenses are not in the IPEF as currently proposed, USMEF still highlighted these issues in the comments. These barriers place U.S. red meat products at a significant disadvantage in several key markets in the Indo-Pacific region, especially where competitors have regional or bilateral trade agreements in place.

"We focused our comments on kind of the main themes of science-based trade, promoting systems-based approvals for U.S. export establishments, establishing regionalization agreements related to foreign animal disease, and also promoting the idea that USTR should consider addressing tariffs, quotas, import licensing schemes within these countries," Arp says.

The region is one of the most important for U.S. red meat exports. In addition to well-established markets such as Japan and South Korea, several countries in Southeast Asia hold excellent growth potential for U.S. pork, beef and lamb.

"Absolutely if there's an opportunity to address some of these systemic barriers to trade," Arp says. "So, for example, gaining more beef access into markets, like Korea and creating more oppor-

tunities for plants to get approved in markets like Malaysia and Indonesia, then this could potentially pose a significant boost to red meat exports in the future, providing that those issues can get addressed within the framework.³

Horsin' around time is here

For many folks May means getting the garden planted, mowing the lawn, or counting down the days until school is out. For lots of riders in the north central Kansas area it means getting our horses ready for the upcoming EKHA Show Season.

EKHA stands for Eastern Kansas Horseman's Association. It is an organization that's been around over 50 years, providing competitive fun for horse riders of all ages and skill levels. Events at the shows include showmanship, lead line, walk-trot classes, western pleasure, English pleasure, reining, barrel racing, western jumping and more. Age groups for exhibitors range from six and under classes, to 61 and over. Exhibitors must be members

Kathy Martin and her horse Scanner will be showing in the 2022 EKHA Horse Shows.

in good standing of a saddle club belonging to the EKHA

Member saddle clubs include: Clay Center Cowboys for Christ, Mitchell County Riders, Junction City Saddle Club, Buckeye by Abilene, Salina Silver Spurs, Crossroads at Belleville, Santa Fe, Osborne, Sand Springs and Blackjack by Manhattan. The first shows will be

in Clay Center on Saturday, May 21, 2022 and on Sunday, May 22, 2022 at Buckeye. The Clay Center show begins at 10:00 a.m. and will be held at the Clay County fairgrounds arena. There is no admission charge and spectators are welcome. For more information call Kathy Martin, 785-463-5463, or check Facebook or EKHA online.

Sen. Marshall reminds Kansans about disaster assistance

U.S. Senator Roger Marshall, M.D. reminds farmers and ranchers impacted by Friday, April 29th's tornado and severe storms to contact their local Farm Service Agency (FSA) office to learn more about disaster assistance programs offered through the U.S. Department of Agriculture (USDA).

"Since Friday, we have learned of more tornadoes and significant weather events that occurred in counties across Kansas. I encourage landowners who have discovered damage to fencing and livestock to report damage to their local FSA office. We cannot stop significant weather events, but we can ensure our farmers and ranchers have the resources they need to rebuild and be made whole from damage and losses they could not prevent," said Marshall.

Background:

Tornadoes and severe storms were reported in multiple counties on Friday, April 29, damaging

fences and potentially harming livestock. The USDA offers assistance to farmers and ranchers to repair damage to farmland through the Emergency Conservation Program (ECP). Additional assistance is available to livestock owners who lost livestock due to adverse weather. Producers and landowners are encouraged to contact their county FSA office to learn more about the application and reporting process.

2022 Spring Crop Field Day to be held May 17

The 2022 Spring Crop Field Day will be held on May 17th from 8:15 am to 12:30 p.m. at the Southeast Research and Extension Center, 25092 Ness Rd., Parsons. This year they are going to have an excellent line-up of speakers and field tours, starting out with Dan O'Brien, K-State agricultural economist, speaking on the current trends and future expectations of the grain markets.

Komet Irrigation has

developed a new part-cir-

cle sprinkler design, the

application.

Next they will have Chris Little, K-State pathologist, covering soybean diseases common in southeast Kansas, with focus on sudden death syndrome. Special guest will be Jessica Rutkoski who is the Illinois Extension soft wheat breeder talking about soft wheat breeding. They will have field tours of sideby-side comparisons of hard and soft winter wheat for farmers to see. Don't

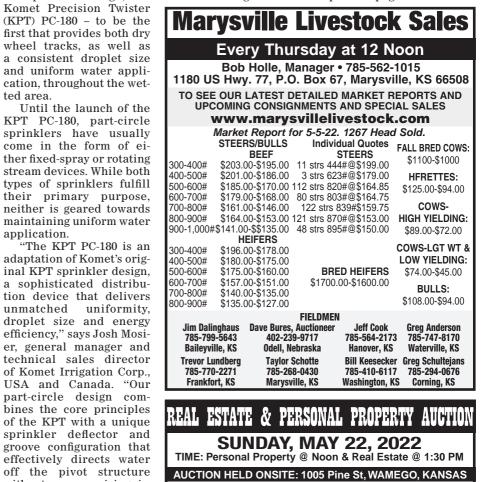

miss what will be an excellent Spring Field Day on May17th. Lunch is provided thanks to many local ag business sponsors.

An informational flyer can be downloaded from the Wildcat District website at www.wildcatdistrict.k-state.edu. For more information or registration, contact the SEREC at 620-421-4826 or email icoover@ksu.edu

TUMBLEWEED AUCTION CO. LLC

TumbleWeed Auction Co. LLC 935 E HWY 36 Smith Center, KS 785-282-5419

TumbleWeed Auction Co. LLC is taking consignments at anytime & has joined up with Jones Machinery, Inc. with 50 years knowledge in used farm equipment. Online auctions provided by AUCTIONTIME.com with absolute & reserve option available. Call or stop by today!

Built for installation on rigid drops around the towers, the KPT PC-180 features a standard angle and multi-jet trajectory for controlling droplet size consistency in a 180-degree wetted pattern across the entire throw and nozzle range.

The part-circle sprinkler also pairs gentle water application and low instantaneous application with the proper overlap of individual sprinkler patterns. This enables efficient infiltration of water to the root zone while reducing wind drift and minimizing the risk of run-off or soil sealing.

"Komet Irrigation is focused on field-specific irrigation solutions. By working closely with growers, we've identified and developed a unique range of pivot sprinklers that maximize irrigation efficiency for different application requirements," Mosier emphasizes. "The KPT PC-180 sprinkler represents our latest advancement for providing dry wheel track solutions - an aspect of irrigation that can pose great challenges for a system's functionality and performance if not addressed."

The Komet Irrigation pivot product line-up is the successful result of a ten-year research and development process. The precision manufacturing of every Komet sprinkler component includes strict quality controls and field testing over many irrigation seasons in a variety of terrains, soils, water conditions, crop types and climates to ensure the highest levels of performance, reliability and adaptability in many field environments.

DESCRIPTION: This highly maintained property is ready for a new owner to make i their own! The main floor of just over 1400 sq ft has a layout that includes a master

suite, another massive bedroom and two smaller non conforming rooms (one is currently set up for laundry). The basement is a clean slate ready to finish and expand the living space for the property.

REAL ESTATE TERMS: Property sells AS IS, WHERE IS. 5% non-refundable down payment is required day of sale by check. Buyer must be able to close on or before June 24, 2022. Buyer needs bank letter of loan approval or funds verification. Cost of Owners Title Policy to be split equally between Buyer and Seller. Buyers are responsible for understanding all zoning, building and other regulations associated with the property prior to the day of auction. Al announcements day of sale take precedence over written materials

Grass & Grain, May 10, 2022 Page 18 Compete in Kansas and National Corn Yield Contests with one easy entry

Entries are now being accepted for the Kansas and National Corn Yield Contests (NCYC). Kansas growers who enter the NCYC are automatically entered in the Kansas Corn Yield Contest. Growers must enter the NCYC to participate in the Kansas contest, simplifying entry and building Kansas participation in both contests. The Kansas Corn Yield Contest is sponsored by Kansas Corn and K-State Research and Extension

"This is the second year for the Kansas Corn Yield Contest to be linked to the national contest, allowing growers to submit one registration and one harvest form for both the national and state contests," said Deb Ohlde, Kansas Corn director of growers services. "We appreciate our partnership with K-State Research and Extension that encourages innovation and celebrates farmers who achieve exceptional yields."

In the Kansas Corn Yield Contest, growers compete for cash prizes and recognition for irrigated and non-irrigated yields in ten districts as well as awards for the state's top irrigated and top non-irrigated entries. Kanas CYC prizes will be awarded at the Kansas Corn Symposium in January 2023

In the National Corn Yield Contest, winners will receive national recognition in publications, as well as other awards from participating sponsoring seed, chemical and crop protection companies. NCYC winners will be honored at the 2023 Commodity Classic in Orlando, Florida

"Together, entrants generate a pool of collective knowledge and spark innovation. These champions actively contribute to the advances that will continue to keep U.S. farmers meeting growing demands for feed, fuel and fiber sustainably for generations to come," said Lowell Neitzel, a Kansas farmer who chairs NCGA's Member and Consumer Engagement Action Team.

Enter by June 30 to save with a special \$75 early

entry rate. Entry will remain open at the full rate of \$110 through Aug. 17. All harvest forms will be due by Nov. 30. NCYC winners will be announced on Dec. 14. Many seed companies pay for entry and membership fees for growers through the NCYC voucher program.

Prizes for the Kansas Corn Yield Contest will be awarded at the state and district levels. District winners receive a \$300 cash prize and a plaque. Second place winners receive a \$200 cash prize and third place receive a \$100 cash prize. The highest yielding dryland and irrigated entries statewide each receive an additional \$500 cash prize and plaque. Kansas CYC winners will be announced on Dec. 23, 2022.

For yield contest information and registration links, visit our webpage at kscorn.com/yieldcontest. For more information, call Kansas Corn at 785-410-5009, or email dohlde@ksgrains.com.

Beef farmers and ranchers make many impactful contributions to societal, economic fabric of Kansas

As the weather warms. people fire up their grills, grab their tongs and reach for mouth-watering steaks and real beef burgers to create memories with families and friends. In doing so, they are supporting a beef community that positively contributes to the environmental, economic. and nutritional well-being of Kansas. Rec-ognizing the substantial importance of the beef community. Governor Laura Kelly has declared May as Beef Month. In addition, the Governor plans to officially sign the proclamation at Lyons Ranch, near Manhattan, in the coming weeks.

DAY

PROMOTED BY OZARK EMPIRE FAIR

620-423-2355 417-833-2660

fourstatefarmshow.com

According to Randall Debler, Chair of the Kansas Beef Council Executive Committee, the value of beef to the economy and social fabric of the state is remarkable. "Kansas ranks third in the country with more than 6.5 million cattle on ranches and in feedvards," says Debler. "That's more than twice the state's human population." Furthermore. Kansas ranked second in fed cattle marketed, with roughly 6.7 million in 2020. In total, beef cattle and calves represented 51.4% of the 2020 Kansas agricultural cash receipts, bolstering and enhancing the spending power

in local economies across the state.

Not only does the marketed value of beef have a substantial impact on the economy, but the Kansas beef community also has a significant impact on employment. According to the Kansas Department of Labor, Kansas meat packing and prepared meat products manufacturing make up the largest share of the food processing industry in the state. This industry provides employment for over 31,440 people in Kansas (Kansas Department of Labor). This includes jobs in companies supplying goods and services to manufacturers, distributors and retailers.

as well as those depending upon sales to workers in the meat industry.

The beef produced by Kansas beef farmers and ranchers, feeders and processors contributes substantially to human health at every life stage. Research from gold-standard randomized, controlled trials, like a recent checkoff-funded study out of Pennsylvania State University demonstrates lean beef can be the protein of choice in many diets and people who eat about 5.5 ounces of lean fresh beef daily as part of a healthy diet can reduce heart disease risk factors, including total LDL cholesterol

Kansas has about 45.7 million acres of farm ground. Not all of this land can be used to grow crops. however. Grazing cattle is an ideal technique for efficiently utilizing grasses and plants growing on over 15.5 million acres of Kansas pasture and rangeland. These acres would be wasted if not for ruminants like cattle who can turn these resources into essential protein and nutrients for humans. Additionally, grazing cattle helps maintain grasslands and reduce the fuel load, which can spark destructive wildfires.

"Kansas ranchers and feeders are committed to produce a wholesome and

nutritious product responsibly and sustainably," Debler says. "However, beef production refined over many generations is only part of the story. Producers also keep consumer needs and wants top of mind."

"While all aspects of beef raising and processing are important, producing beef that is delicious, safe, wholesome and nutritious is 'job one' for our industry," Debler says. "After all, producers of beef are also consumers of the beef they produce. They are proud of their role in supplying this product that so many people enjoy.'

and blood pressure. K-State, USDA and Cargill to explore presence of Salmonella in ground turkey

By Pat Melgares, K-State **Research and Extension** news service

Researchers from Kansas State University and the USDA's Agricultural Research Service have teamed with scientists from one of the world's largest food companies to conduct a study they hope can help decrease the incidence of Salmonella in ground turkey.

Jessie Vipham, an assistant professor in K-State's Department of Animal Sciences and Industry, was

for \$589,800 from the US-DA's National Institute of Food and Agriculture to explore ways to predict Salmonella contamination in turkey flocks before they are harvested.

Last year, the USDA reported that while Salmonella is rarely detected in whole turkeys, inspectors found it in 18% of ground turkey samples taken in 2020.

"Our goal is to identify an effective pre-harvest, pre-grind sample to predict Salmonella contam-

destined for ground turkey," Vipham said. Vipham has formed a

partnership with Cargill and senior research scientist Anna Carlson to conduct the on-farm tests.

'Turkey producers will be able to use this sampling strategy to create diversion programs for turkey flocks to be harvested at specific times - such as the last part of the day - or for turkey parts to be used in specific programs," Carlson said. "That will help to reduce the risk of cross-contamination with-

Currently, how, where and at what amount Salmonella exists in turkey operations is not fully known. "Our approach," Vipham said, "will help unlock some of the mystery surrounding Salmonella contamination in ground turkey, and will aid in identifying targeted control points, particular-

The researchers' work begins in May and will continue for three years. They hope it will build on knowledge of the foodborne pathogen in turkey production, and of pre-harvest samples that accurately predict its presence in the ground product.

"Although our collaboration is with Cargill, this project was designed with the entirety of the turkey industry in mind," Vipham said. "We have strong potential to improve pre-harvest and post-harvest practices, but we also believe this is the first study that will identify turkey risk factors for Salmonella from pre-harvest and post-harvest samples.'

In addition to Cargill, the project is backed by USDA's Agricultural Research Service, and other faculty from K-State's Department of Animal Sciences and Industry, including Travis O'Quinn, Valentina Trinetta and Sara Gragg, a group that "really helped in designing a project that is targeting a question that has strong industry and regu-latory interest," according to Vipham.

Grass & Grain, May 10, 2022 Page 19 Agri-business has \$24.4 billion impact on Kansas City region

Agriculture and its related businesses continue to be a driving force in the regional economy, according to an analysis released by the Agricultural Business Council of Kansas City. Using the most recent data available, 66 agriculture, food, and food processing sectors were analyzed to determine their overall contribution to the economy supported by the Kansas City Agribusiness Council. These 66 sectors have an estimated total economic impact of approximately \$24.445 billion and support 98,655 jobs in the Greater Kansas City area.

The study looked at second place with 6,952 the impact of agriculture, food, and food processing sectors of the 20 counties contained in the Greater Kansas City area. The study found those agri-business sectors account for 6 percent of the entire workforce in the area, or 98,655 jobs.

In looking at the components of the agri-business sector, meat processing accounts for over \$3 billion in total output. In terms of employment. landscape and horticultural services leads all categories with a total employment estimated at 8,966 jobs. Standing in jobs is the category for beef cattle ranching and farming, including feedlots and dual-purpose ranching and farming.

"This study illustrates the continuing strong role agri-business plays in this region's economy," said Bob Petersen, executive director of the Agricultural Business Council." He continued, "These are impressive numbers - over \$24 billion in Gross Regional Product and over 98.000 jobs.'

"Agriculture has clearly been a key economic driver for the Kansas City region and it holds great potential for the future as well," said Secretary of Agriculture Mike Beam. "The Kansas Department of Agriculture appreciates the strong ties we have with the Agricultural Business Council of Kansas City and other ag partners in the Greater Kansas City area, and we look forward to exploring opportunities for continued growth in this region.'

"Here at the Missouri Department of Agriculture, we are thrilled to see the economic impact of agriculture in the Kansas City region," said Missouri director of agriculture Chris Chinn. "The Kansas City area is the hub of the world's leading animal health corridor, as well as agribusinesses and companies that impact producers and consumers across the planet. We are proud of the role our industry plays in the region and look forward to continued growth."

Greg Krissek, CEO of Kansas Corn. noted that Kansas City was founded with agricultural roots and this report solidifies that agriculture and related industries remain the backbone of the Kansas City economy. To put this in perspective, the total

estimated agricultural impact of \$24.5 billion is larger than the entire economies of 103 counties in Kansas and the estimated job impact of 98,655 is larger than the entire population of all but five counties in the state.

The economic analysis was assembled by Tori Laird, agency economist, with the Kansas Department of Agriculture. In addition to staff support from KDA, funding was also provided by the Missouri Department of Agriculture and Kansas Corn, in addition to the Agricultural Business Council of Kansas City.

Beef export value sets another record; pork exports improve but remain below last year's record totals

U.S. beef exports soared to another new value record in March, according to data released by USDA and compiled by the U.S. Meat Export Federation (USMEF). March pork exports were the largest so far this year but well below the record-large totals posted in March 2021. Lamb exports continued to gain momentum in March, reaching the third largest monthly volume on record and the highest value in nearly eight years.

Demand for U.S. beef soaring in broad range of markets

Beef exports totaled 126,285 metric tons (mt) in March, up 1% from a year ago and the third largest on record, while value climbed 33% to a record \$1.07 billion. First quarter exports increased 6% to 353,852 mt, valued at just over \$3 billion (up 41%).

"Global demand for U.S. beef has eclipsed anything I have seen in many years in the meat business," said USMEF president and CEO Dan Halstrom. "While this momentum is fueled by mainstay markets such as South Korea, Japan and Taiwan, demand is also very strong in China/Hong Kong and key Latin American markets, while exports to the Middle East have rebounded impressively."

Halstrom cautioned that first quarter results do not fully reflect the impact of recent COVID-19 lockdowns in China that have slowed product movement and forced many restaurants to suspend or limit service. These obstacles are likely to have a greater impact on April and May export data. He also noted that while beef demand has been very resilient, inflation represents a potential headwind.

"Consumers throughout the world have shown how much they value the quality of U.S. beef, but disposable income is under increasing pressure as they pay more for energy and other daily needs," he said.

Pork exports to Mexico, Dominican Republic on record pace

March pork exports were 222,581 mt, the largest since November but nearly 25% below the record volume achieved a year ago. Export value was \$615.3 million, also the highest since November but down 23% year-over-year. First quarter pork exports fell 20% from a year ago to 629,928 mt, valued at \$1.71 billion (down 17%). Pork exports to Mexico and the Dominican Republic raced to a record pace in the first quarter and South Korea posted a strong increase in export value, but shipments to most destinations were below last vear.

"While pork exports were down significantly from last year's record, we saw some encouraging trends

in the March results," Halstrom explained. "U.S. pork commanded a higher price per pound than a year ago, with outstanding demand from Mexico and value growth in key markets such as South Korea and the Dominican Republic. The stronger U.S. dollar creates more price pressure in some destinations, but this will be offset to some degree by the narrowing price gap between U.S. and European pork."

Halstrom added that pork, beef and lamb exporters continue to face logistical obstacles and delays when moving product overseas. The situation is especially challenging for chilled meat shipments to key Asian markets.

Upward trend for lamb exports continues

With growth to Mexico, the Caribbean and the Philippines, U.S. lamb exports continued to gain momentum as March shipments increased 75% from a year ago to 1,906 mt, the largest volume since 2011 and the third largest on record. Export value nearly doubled to \$2.88 million, up 95% and the highest since 2014. First quarter lamb exports increased 54% from a year ago to 5,019 mt, while value climbed 72% to \$7.35 million. Muscle cut exports grew at an even faster pace, up 80% from a year ago in volume (492 mt) and 88% in value (\$3.04 million).

e cow herd gar

By Derrell Peel, Oklahoma State University

Through mid-April, beef cow slaughter is up 16.9 percent year over year; a surprisingly strong rate of cow slaughter for this time of year. This likely reflects continuing drought impacts carried over from last year, combined with very strong cull cow prices and limited forage prospects going forward. The fast pace of cow slaughter thus far implies the likelihood of significant beef cow herd liquidation in 2022. Liquidation is expected to continue in the first half of the year unless drought conditions improve immediately and significantly. Cow slaughter could moderate late in the year if early culling and overall lower cow numbers result in lower seasonal slaughter in the fall. However, the numbers tell the story. The current pace of beef cow slaughter suggests an annual beef herd culling rate of 13.8 percent, a record in data back to 1986. The beef cow inventory would likely decrease by 4 percent year over year with the January 1, 2023 inventory dropping below 29 million head. This would be the largest annual beef cow herd decrease since the mid-1980s.

ably not continue all year. In order for annual beef cow slaughter to average, say 13 percent higher year over year, average beef cow slaughter for the remainder of the year would have to average 11.6 percent. In that example, net beef herd culling would still be over 13 percent this year. The result would likely be a January 1, 2023 beef cow inventory in the vicinity of 29.0 million head, down over 3.5 percent vear over vear.

If annual beef cow slaughter equaled last year's nine percent yearover-year increase, slaughter would have to average 6.1 percent higher yearover-year for the remainder of the year. That level of decrease in the slaughter rate (from the current 16.9 percent rate) seems unlikely at this point. In this case, the net herd culling rate would be just under 13 percent (though still a record level) and the 2023 beef cow herd could be roughly 29.2 million head, down about three percent year over year. All of these outcomes depend on drought in the coming weeks and months. Dramatic and immediate improvement in drought conditions could allow the industry to avoid these rather dire results. The next few months will likely have impacts on the

cattle industry for several vears. Drought conditions that result in the levels of liquidation described above would also prevent retention of replacement heifers. This implies that, if conditions do not improve until late this year or into next year, better conditions in 2023 would, at best, allow the industry to stabilize inventories and lay the groundwork to begin recovery in 2024 at the earliest.

There is, however, some optimism. As May begins, we are seeing some rainfall in parts of western Oklahoma that have

seen very little moisture in six months. The latest **Climate Prediction Center** seasonal drought outlook map now shows prospects for some drought improvement in the Plains, though drought is expected to continue. The next few weeks

are critical

Cattle Sale Every Thursday 11:00 AM

Grass & Grain, May 10, 2022 Cattle markets discussed in Ag Committee hearings

The House and Senate Agriculture Committees spent several hours last week hearing different viewpoints on issues related to cattle markets and discussing possible legislative and regulatory solutions. After nearly nine hours of combined hearings, questions raised by members of Congress illustrate the lack of consensus and validate concerns that government intervention could do more harm than good.

"The committee hearings this week once again demonstrate the importance of allowing cattle markets to function in a free-market system, based on proven economic principles and research published by renowned university economists, such as Dr. Koontz, who testified this week," TCFA chair-TCFA chairman Kevin Buse noted. "As active participants in feeder and fed cattle markets every day, our members will remain diligent in our commitment to improve price discovery and negotiated trade - and base our decisions on economic facts, not emotion, that return the highest value to our cattle feeding customers."

National Cattlemen's Beef Association (NCBA) president Don Schiefelbein testified before the House Agriculture Committee urging the members to oppose government mandates and instead support key policies with broad, unified support across the entire cattle industry including a cattle contract library, reauthorization of Livestock Mandatory Reporting and investments in regional processing capacity expansion.

The CEOs of Tyson, Cargill, National Beef and JBS also testified, offering insight into their actions and future outlook

Fake meat bill signed by the governor

Gov. Laura Kelly recently signed into law House Substitute for SB 261, also known as the fake meat labeling bill. The KLA-supported bill already had been passed by both the House and Senate.

As of July 1, the new law will require producers of alternative meat products that use meat terms to include a disclaimer indicating the product does not contain meat on the label in a prominent and conspicuous font size in close proximity to the meat term. Disclaimers can include vegetarian, vegan, meatless, meat-free, plant-based or other terms approved by the Kansas secretary of agriculture as appropriate. Without such disclaimers, the product will be considered misbranded.

SFLI FR: DARYL R. TOTTEN of lower margins for processors ahead. Julie Anna Potts, President and CEO of the Meat Institute, provided written testimony to the committee which detailed the complex integrated market players in the cattle sector. According to USDA, in the 627 months beginning January 1970 through March 2022. packers have received the smallest share of the consumer beef dollar in all months but May 2020, at the peak of the COVID-related shutdowns on slaughter which reduced beef supplies.

A nearly three-hour Senate Agriculture Committee hearing discussed the Cattle Price Discovery and Transparency Act (S. 4030) and additional oversight through creation of the Office of the Special Investigator (S. 3870). The hearing featured two panels, one that offered insight from USDA officials on how proposed legislative solutions could be implemented and the other with farmer and industry insight.

Kansas Livestock Association and NCBA member Shawn Tiffany testified in opposition to a government mandate as it could potentially result in fewer marketing opportunities and less incentive for producers to invest in genetics and innovative production techniques that lead to higher-quality beef.

Dr. Koontz also testified that there's no research that shows that increased mandated cash sales will improve the outlook for cow-calf producers. Instead, it could create a \$50 loss in value of beef, and it's likely that those losses will be felt at the farm level. "More bidders and more buyers are always better, but at what cost?' he asked.

Orth inducted into Saddle and Sirloin Portrait Gallery

Six of the thirteen living members of the Saddle & Sirloin Portrait Gallery recently gathered in Louisville, Kentucky for Neil Orth's induction into the Saddle and Sirloin Livestock Portrait Gallery. The Saddle and

Sirloin Portrait Gallery is considered the highest honor in the Livestock Industry. Portrait Gallery is the largest collection of quality portraits by noted artists in the world devoted to a single industry. The collec-

tion was established at the Chicago Union Stockyards, home of the International Livestock Show in 1903 and was moved to the Kentucky Fair and Exposition Center in Louisville, Kentucky in 1976.
